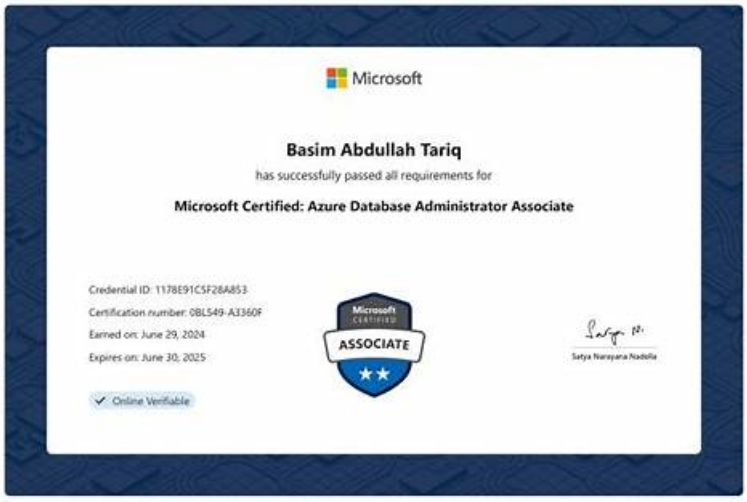
Pass Guaranteed Microsoft - Perfect Valid Test GH-100 Fee



We know that the standard for most workers become higher and higher; so we also set higher goal on our GH-100 guide questions. Our training materials put customers' interests in front of other points, committing us to the advanced GH-100 learning materials all along. Until now, we have simplified the most complicated GH-100 Guide questions and designed a straightforward operation system, with the natural and seamless user interfaces of GH-100 exam question grown to be more fluent, we assure that our practice materials provide you a total ease of use.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	• Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.
Topic 2	• Manage access and permissions based on membership: This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.
Topic 3	• Manage GitHub Packages:This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI • CD pipelines.
Topic 4	• Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI • CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.

Topic 5	• Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.

Valid Valid Test GH-100 Fee by ITExamSimulator

With the development of information and communications technology, we are now living in a globalized world. GH-100 information technology learning is correspondingly popular all over the world. Modern technology has changed the way how we live and work. In current situation, enterprises and institutions require their candidates not only to have great education background, but also acquired professional GH-100 Certification. Considering that, it is no doubt that an appropriate certification would help candidates achieve higher salaries and get promotion.

Microsoft GitHub Administration Sample Questions (Q19-Q24):

NEW QUESTION # 19
You need to create a support bundle for your GitHub Enterprise Server instance with the hostname ghe.avocado.corp. What command should you use to create a support bundle?

- A. ssh -p 122 adming@ghe.avocado.corp - 'ghe-diagnostics' > support-bundle.tgz
- B. ssh -p 122 adming@ghe.avocado.corp -- 'ghe-support-bundle -o' > support-bundle.tgz
- C. ssh -p 122 adming@ghe.avocado.corp -- 'ghe-config generate-support-bundle' > support-bundle.tgz
- D. curl -u admin https://ghe.avocado.corp/diagnostics/support-bundle.tgz -o

Answer: B

Explanation:
Run the ghe-support-bundle command over SSH on your appliance and redirect its output to a file. For example:
ssh -p 122 admin@ghe.avocado.corp -- 'ghe-support-bundle -o' > support-bundle.tgz This invokes the built-in support-bundle utility on your GitHub Enterprise Server instance and captures the resulting archive locally.

NEW QUESTION # 20
What benefit does GitHub Advanced Security provide?

- A. helps organization administrators analyze and configure permissions to the least privilege required
- B. helps enterprise administrators improve and maintain network security for their GitHub Enterprise Server instances
- C. helps developers improve and maintain the security and quality of code
- D. helps organization administrators manage security tokens

Answer: C

Explanation:
GitHub Advanced Security equips developers with built-in code scanning (CodeQL), secret scanning, dependency review, and other AppSec tools - helping them find, fix, and prevent security vulnerabilities while maintaining code quality.

NEW QUESTION # 21
In a GitHub repository using Dependabot, which of the following best describes the purpose of the .github/dependabot.yml file?

- A. It configures scheduling, package ecosystems, and target directories for update checks.
- B. It encrypts dependency versions before storing them in the repo.
- C. It enables GitHub to scan for secrets in dependency files.
- D. It lists commit SHAs to exclude from automatic pull requests.

Answer: A

Explanation:
The .github/dependabot.yml file defines Dependabot's package-ecosystem, the directories to inspect, and the update schedule (daily/weekly/monthly), controlling when and where Dependabot checks for new versions.

NEW QUESTION # 22
When a user becomes a member of multiple GitHub organizations, which THREE of the following are important considerations for administrators? (Choose three.)

- A. The user's repository access and/or team membership needs to be managed separately for each organization.
- B. The user's profile information becomes private to non-organization members.
- C. The user will automatically have the same role across all organizations.
- D. The user's personal repositories will become accessible to all organizations.
- E. The user will need to authorize credentials separately for each SAML-enabled organization.
- F. The user will have different permission levels in each organization.

Answer: A,E,F

Explanation:
A user's repository access and team memberships are scoped to each organization, so admins must configure permissions separately per org.
When an organization enforces SAML SSO, each member must authorize their personal access tokens or SSH keys for that org, requiring separate approval for each SAML-enabled organization Roles and permission levels (owner, member, billing manager, repository roles, etc.) are assigned on a per-organization basis, so a user often has different permissions in different organizations.

NEW QUESTION # 23
How is CodeQL different from other static analysis tools?

- A. It runs analysis only after a security breach.
- B. It removes insecure code automatically
- C. It allows querying of code semantics using a database-like language.
- D. It only works for open-source projects.

Answer: C

Explanation:
CodeQL differs from traditional static analysis tools by ingesting your code into a queryable database and letting you write QL queries - its own database-style language - to express semantic checks and find patterns across the codebase.

NEW QUESTION # 24
.....

Our GH-100 exam questions are your optimum choices which contain essential know-hows for your information. So even trifling mistakes can be solved by using our GH-100 practice engine, as well as all careless mistakes you may make. If you opting for these GH-100 Study Materials, it will be a shear investment. You will get striking by these viable ways. If you visit our website, you will find that numerous of our customers have been benefited by our GH-100 praparation prep.
