Amazon AWS-Solutions-Associate (AWS Certified Solutions Architect - Associate (SAA-C02)) certification exam is a valuable certification for individuals who want to demonstrate their expertise in cloud computing and gain recognition as an AWS Solutions Architect. AWS Certified Solutions Architect - Associate (SAA-C03) certification exam covers a wide range of topics, including designing and deploying scalable, highly available, and fault-tolerant systems on AWS, selecting the appropriate AWS services for a given scenario, and identifying cost-effective solutions that meet business requirements. Passing the AWS-Solutions-Associate certification exam can help individuals enhance their career prospects and open up new opportunities in cloud computing.

## Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q186-Q191):

### NEW QUESTION # 186

A Solutions Architect is considering possible options for improving the security of the data on an Amazon EBS volume attached to an Amazon EC2 instance.

Which solution will improve the security of the data?

- A. Migrate the sensitive data to an instance store volume
- B. Create an IAM policy that restricts read and write access to the volume
- C. Use Amazon single sign-on to control login access to the EC2 instance
- **D. Use AWS KMS to encrypt the EBS volume**

**Answer: D**

### NEW QUESTION # 187

A company has resources across multiple AWS Regions and accounts. A new solutions architect needs to build a map of the workloads and their relationships but has no documentation from the previous employee.

Which solution will provide these details with the least operational effort?

- **A. Use Workload Discovery on AWS to generate architecture diagrams.**
- B. Use AWS Systems Manager Inventory to generate a map from the detailed report.
- C. Use AWS X-Ray to view workload details and manually draw diagrams.
- D. Use AWS Step Functions to collect workload details and build diagrams manually.

**Answer: A**

Explanation:

Workload Discovery on AWS automatically scans AWS accounts and Regions, identifies deployed resources, and generates relationship-aware architecture diagrams. This provides a complete workload map with minimal operational effort.

Systems Manager Inventory (Option A) collects instance metadata but does not build multi-account architecture diagrams.

Step Functions (Option B) and X-Ray (Option D) require manual diagramming and do not meet the operational-efficiency requirement.

### NEW QUESTION # 188

A company's application integrates with multiple software-as-a-service (SaaS) sources for data collection. The company runs Amazon EC2 instances to receive the data and to upload the data to an Amazon S3 bucket for analysis. The same EC2 instance that receives and uploads the data also sends a notification to the user when an upload is complete. The company has noticed slow application performance and wants to improve the performance as much as possible.

Which solution will meet these requirements with the LEAST operational overhead?

- A. Create a Docker container to use instead of an EC2 instance. Host the containerized application on Amazon Elastic Container Service (Amazon ECS). Configure Amazon CloudWatch Container Insights to send events to an Amazon Simple Notification Service (Amazon SNS) topic when the upload to the S3 bucket is complete.
- **B. Create an Amazon AppFlow flow to transfer data between each SaaS source and the S3 bucket.**

Configure an S3 event notification to send events to an Amazon Simple Notification Service (Amazon SNS) topic when the upload to the S3 bucket is complete.

- C. Create an Auto Scaling group so that EC2 instances can scale out. Configure an S3 event notification to send events to an Amazon Simple Notification Service (Amazon SNS) topic when the upload to the S3 bucket is complete.
- D. Create an Amazon EventBridge (Amazon CloudWatch Events) rule for each SaaS source to send output data. Configure the S3 bucket as the rule's target. Create a second EventBridge (CloudWatch Events) rule to send events when the upload to the S3 bucket is complete. Configure an Amazon Simple Notification Service (Amazon SNS) topic as the second rule's target.

**Answer: B**

Explanation:

Explanation

Amazon AppFlow is a fully managed integration service that enables you to securely transfer data between Software-as-a-Service (SaaS) applications like Salesforce, SAP, Zendesk, Slack, and ServiceNow, and AWS services like Amazon S3 and Amazon Redshift, in just a few clicks. <https://aws.amazon.com/appflow/>

### NEW QUESTION # 189

An organization is making software for the CIA in USA. CIA agreed to host the application on AWS but in a secure environment. The organization is thinking of hosting the application on the AWS GovCloud region.

Which of the below mentioned difference is not correct when the organization is hosting on the AWS GovCloud in comparison with the AWS standard region?

- A. GovCloud region authentication is isolated from Amazon.com
- **B. The billing for the AWS GovCloud will be in a different account than the Standard AWS account.**
- C. It is physically isolated and has logical network isolation from all the other regions.
- D. Physical and logical administrative access only to U.S. persons.

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

AWS GovCloud (US) is an isolated AWS region designed to allow U.S. government agencies and customers to move sensitive workloads into the cloud by addressing their specific regulatory and compliance requirements. The AWS GovCloud (US) Region adheres to the U.S. International Traffic in Arms Regulations (ITAR) requirements. It has added advantages, such as: Restricting physical and logical administrative access to U.S. persons only There will be a separate AWS GovCloud (US) credentials, such as access key and secret access key than the standard AWS account The user signs in with the IAM user name and password The AWS GovCloud (US) Region authentication is completely isolated from Amazon.com If the organization is planning to host on EC2 in AWS GovCloud then it will be billed to standard AWS account of organization since AWS GovCloud billing is linked with the standard AWS account and is not be billed separately.
