## Palo Alto Networks Cloud Security Professional Sample Questions (Q107-Q112):

### NEW QUESTION # 107

Which serverless cloud provider is covered by the "overly permissive service access" compliance check?

- A. Alibaba
- B. Azure
- C. Google Cloud Platform (GCP)
- D. Amazon Web Services (AWS)

**Answer: D**

Explanation:

The "overly permissive service access" compliance check is specifically designed to evaluate and ensure that cloud services are not granted more permissions than necessary, which could lead to potential security risks.

Among the listed options, Amazon Web Services (AWS) is known for its extensive service offerings and the complexity of its Identity and Access Management (IAM) configurations. Prisma Cloud, a comprehensive cloud security platform by Palo Alto Networks, provides extensive support for AWS, including checks for overly permissive service access. This ensures that AWS environments adhere to the principle of least privilege, reducing the attack surface by limiting access to the minimum necessary to perform required tasks.

Prisma Cloud's capabilities in AWS environments are detailed in various resources, including documentation and guides provided by Palo Alto Networks, which highlight its effectiveness in identifying and mitigating risks associated with excessive permissions in AWS services.

### NEW QUESTION # 108

You have onboarded a public cloud account into Prisma Cloud Enterprise. Configuration Resource ingestion is visible in the Asset Inventory for the onboarded account, but no alerts are being generated for the configuration assets in the account. Config policies are enabled in the Prisma Cloud Enterprise tenant, with those policies associated to existing alert rules. ROL statements on the investigate matching those policies return config resource results successfully. Why are no alerts being generated?

- A. The public cloud account does not access to configuration resources.
- B. The public cloud account does not have audit trail ingestion enabled.
- **C. The public cloud account is not associated with an alert rule.**
- D. The public cloud account is not associated with an alert notification.

**Answer: C**

Explanation:

In Prisma Cloud Enterprise, for alerts to be generated for configuration assets in an onboarded public cloud account, it is essential that the account is associated with an alert rule that matches the enabled config policies.

If the account is not linked to an alert rule or if the existing alert rules do not match the config policies, no alerts will be generated even though configuration resource ingestion is visible, and RQL statements return config resource results. This requirement emphasizes the need for a well-structured alerting mechanism to ensure that security incidents are promptly identified and addressed.

### NEW QUESTION # 109

Which three fields are mandatory when authenticating the Prisma Cloud plugin in the IntelliJ application?  
(Choose three.)

- **A. Access Key**
- B. Tags
- **C. Prisma Cloud API URL**
- **D. Secret Key**
- E. Asset Name

**Answer: A,C,D**

Explanation:

Reference: <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/prisma-cloud-devops-security/use-the-prisma-cloud-plugin-for-intellij.html> When authenticating the Prisma Cloud plugin in the IntelliJ application, the mandatory fields are the Secret Key, Prisma Cloud API URL, and Access Key. These credentials are required to securely authenticate and enable the plugin to communicate with the Prisma Cloud API, ensuring that the plugin can perform its intended functions within the development environment.

### NEW QUESTION # 110

Which step is included when configuring Kubernetes to use Prisma Cloud Compute as an admission controller?

- A. create a new namespace in Kubernetes called admission-controller.
- **B. copy the admission controller configuration from the Console and apply it to Kubernetes.**
- C. enable Kubernetes auditing from the Defend > Access > Kubernetes page in the Console.
- D. copy the Console address and set the config map for the default namespace.

**Answer: B**

Explanation:

When configuring Kubernetes to use Prisma Cloud Compute as an admission controller, a crucial step involves D. copy the admission controller configuration from the Console and apply it to Kubernetes. This step is essential for integrating Prisma Cloud Compute's security controls directly into the Kubernetes admission process, enabling real-time security assessments and policy enforcement for new or modified resources within the cluster.
