But if you buy our Development-Lifecycle-and-Deployment-Architect Study Guide you can both do your most important thing well and pass the Development-Lifecycle-and-Deployment-Architect test easily because the preparation for the test costs you little time and energy.

## Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q68-Q73):

### NEW QUESTION # 68

Universal Containers has dozens of independent user acceptance and functional teams that need to test independently in isolation, and on current production data that was modified within the last week. Which Sandbox type should a Technical Architect recommend?

- A. Partial Copy Sandbox
- **B. Full Sandbox**
- C. Developer Pro Sandbox
- D. Developer Sandbox

**Answer: B**

### NEW QUESTION # 69

In Architect has been working on a large project for the past 6 months. This project must be live by the end of the current month. Which two planning techniques should the Architect use to ensure all metadata changes deploy smoothly and on time? Choose 2 answers

- **A. Ensure all code that is being deployed is checked into source control**
- **B. Validate the final deployment package against production prior to go-live**
- C. Upload a change set from sandbox to production as early as possible
- D. Create a new sandbox and perform a test deployment to that environment

**Answer: A,B**

Explanation:

A and B are the best techniques to ensure a smooth and timely deployment, as they ensure that the code is consistent, version-controlled, and validated against the target environment. C is not a good technique, as it creates an unnecessary sandbox that does not reflect the production environment. D is not a good technique, as it does not allow for testing and validation before deploying to production.

### NEW QUESTION # 70

Universal Containers (UC) innovative apps division is releasing an application which can be installed in their trading partners Salesforce environment. The partners can then build on top of the application with process builders and triggers so the container booking process can be integrated with the trading partners own processes. What is the recommended mechanism for releasing the application?

- A. Change Sets.
- B. Zip file deployable by Force.Com Migration Tool.
- C. Unmanaged Package.
- **D. Managed Package.**

**Answer: D**

Explanation:

Managed package is the recommended mechanism for releasing an application that can be installed in other Salesforce environments. Managed packages allow for versioning, licensing, and upgradeability of the application. They also protect the intellectual property of the developer by hiding the source code of the Apex classes and Visualforce pages.

### NEW QUESTION # 71

A developer with Universal Containers recently created a flow in the developer sandbox. While working on the flow, the developer deactivated it and made updates multiple times before the flow worked as desired. Now the developer is planning to use a change set to migrate the flow to the QA sandbox.

What two statements should be considered when migrating the flow with change sets?

Choose 2 answers

- A. When a change set with a multiple versioned flow is uploaded, and no active version is available, it throws an exception.
- **B. When a change set with a multiple versioned flow is uploaded, it includes only the active version of the flow.**
- C. When a change set with a multiple versioned flow is uploaded, it includes all the versions of the flow.
- **D. When a change set with a multiple versioned flow is uploaded, and no active version is available, it includes the most recent inactive version of the flow.**

**Answer: B,D**

Explanation:

Explanation

When migrating a flow with change sets, the following statements should be considered: When a change set with a multiple versioned flow is uploaded, it includes only the active version of the flow. When a change set with a multiple versioned flow is uploaded, and no active version is available, it includes the most recent inactive version of the flow. These statements are based on the Salesforce documentation on how change sets handle flows with multiple versions. The other statements are incorrect, as they do not reflect the actual behavior of change sets.

## NEW QUESTION # 72

Universal Containers (UC) is using Salesforce Performance Edition. They are planning to host weekly training sessions for the next four weeks. Each training will be five days long and a new set of trainees will attend every week. UC wants to train these users on samples of production data and delete all the data generated during the training session at the end of the week.

What optimal option should a technical architect recommend?

- A. Refresh a Developer Pro sandbox every weekend and load data needed using data loader.
- **B. Refresh a Partial Copy sandbox every weekend and include an appropriate sandbox template.**
- C. Refresh a Developer Pro sandbox every weekend and include an appropriate sandbox template.
- D. Refresh a Partial Copy sandbox every weekend and load data needed using data loader.

**Answer: B**

Explanation:

Explanation

Refreshing a Partial Copy sandbox every weekend and including an appropriate sandbox template will allow UC to train the users on samples of production data and delete all the data generated during the training session at the end of the week. Loading data using data loader is not necessary if the sandbox template includes the relevant data. Developer Pro sandboxes have limited storage and may not be able to accommodate the data needed for the training.

## NEW QUESTION # 73

.....

Development-Lifecycle-and-Deployment-Architect Exam Materials still keep an affordable price for all of our customers and never want to take advantage of our famous brand.
