Development Lifecycle and Deployment Architect Practice Test Exam 2024

Universal Containers is reviewing its environment strategy. They have identified a need for a new hotfix environment to resolve any urgent production issues. Which two sandbox types would be appropriate to use as the hotfix environment? Choose 2 answers Options:

- A. Partial Copy sandbox
- B. Developer sandbox
- C. Full sandbox
- D. Developer Pro sandbox - CORRECT ANSWER-A. Partial Copy sandbox
- C. Full sandbox would be appropriate to use as the hotfix environment.

What is a main characteristic of an agile team?

- A. The team uses Scrum, Kanban, and Extreme Programming.
- B. The team has biweekly sprints to ensure on-time delivery.
- C. The team delivers new releases on dates defined in the beginning of the project, following a project plan
- D. The team improves and evolves its processes and frequently delivers value to the end users. - CORRECT ANSWER-D. The team improves and evolves its processes and frequently delivers value to the end users.

Universal Containers (UC) has been using Salesforce Sales Cloud for many years following a highly customized, single-org strategy with great success so far. What two reasons can justify a change to a multi-org strategy? Choose 2 answers.

- A. UC is launching a new line of business with independent processes and adding any new feature to it is too complex.
- B. UC wants to use Chatter for collaboration among different business units and stop working in silos.
- C. UC follows a unification enterprise architecture operating model by having orgs with the same processes implemented for each business unit.
- D. Acquired company that has its own Salesforce org and operates in a different business with its own set of regulatory requirements. - CORRECT ANSWER-A. UC is launching a new line of business with independent processes and adding any new feature to it is too complex.
- D. Acquired company that has its own Salesforce org and operates in a different business with its own set of regulatory requirements.

Universal Containers has an active production org; and they are planning to release some new features to it next month. The team is working to prepare a deployment plan and reached out to the technical architect for inputs on rollback strategy. What should a technical architect recommend?

Our Development-Lifecycle-and-Deployment-Architect test material can help you focus and learn effectively. You don't have to worry about not having a dedicated time to learn every day. We will simplify the complex concepts by adding diagrams and examples during your study. By choosing our Development-Lifecycle-and-Deployment-Architect test material, you will be able to use time more effectively than others and have the content of important information in the shortest time. Because our Development-Lifecycle-and-Deployment-Architect Exam Torrent is delivered with fewer questions but answer the most important information to allow you to study comprehensively, easily and efficiently. In the meantime, our service allows users to use more convenient and more in line with the user's operating habits, so you will not feel tired and enjoy your study.

More and more people look forward to getting the Development-Lifecycle-and-Deployment-Architect certification by taking an exam. However, the exam is very difficult for a lot of people. Especially if you do not choose the correct study materials and find a suitable way, it will be more difficult for you to pass the exam and get the Development-Lifecycle-and-Deployment-Architect related certification. If you want to get the related certification in an efficient method, please choose the Development-Lifecycle-and-Deployment-Architect Study Materials from our company. We can guarantee that the study materials from our company will help you pass the exam and get the certification in a relaxed and efficient method.

Test Development-Lifecycle-and-Deployment-Architect Practice - Development-Lifecycle-and-Deployment-Architect Real Torrent

Choose BraindumpStudy Development-Lifecycle-and-Deployment-Architect new dumps questions, you will never regret for your decision. Our high-quality Development-Lifecycle-and-Deployment-Architect exam cram can ensure you 100% pass. You see, we have quality control system, each questions of Development-Lifecycle-and-Deployment-Architect exam dumps are checked and confirmed strictly according to the quality control system. Besides, the updated frequency for Development-Lifecycle-and-Deployment-Architect Exam Questions is so regular and in accordance with the real exam changes. You can enjoy one year free update after purchase.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q39-Q44):

NEW QUESTION # 39

Universal containers have recently replaced a custom service center application with Salesforce Service Cloud. Administrators are now confused about which fields and classes are actively being utilized and how future implementations can be maintained. Choose 2 answers

- A. Create an adoption plan for end users using Salesforce dashboards and reports.
- B. Create a standard method for deprecating classes and fields using design standards.
- C. Create a governance process requiring all projects to create project deliverable documentation.
- D. Create a design standard requiring integration to use declarative configurations patterns
- E. Create a governance framework focused on high-level business strategy and goals.

Answer: B,C

NEW QUESTION # 40

What would a technical architect recommend to avoid possible delays while deploying a change set?

- A. Manually validate change sets before deployment.
- B. Manually apply the field type changes.
- C. Manually create new custom objects and new custom fields.
- D. Change set performance is independent of included components.

Answer: A

Explanation:

Manually validating change sets before deployment is a recommended practice to avoid possible delays while deploying a change set, as it can help you identify and resolve any errors or dependencies before the actual deployment. Change set performance is not independent of included components, as some components may take longer to deploy than others. Manually creating new custom objects and new custom fields or manually applying the field type changes are not advisable, as they can introduce human errors and inconsistencies between environments. See Deploy Changes with Change Sets for more details.

NEW QUESTION # 41

Universal Containers requires its developers to develop and test code in one sandbox per developer before deploying to a common sandbox for code review. Which deployment strategy should be used in this environment?

- A. Refresh the developer's sandbox, develop changes, refresh the common sandbox, deploy to the common sandbox, test changes
- B. Refresh the developer's sandbox, develop changes, test changes, refresh the developer's sandbox, deploy to the common sandbox
- C. Refresh the common sandbox, develop changes, refresh the developers and box, deploy to the common sandbox, test changes
- D. Refresh the developer's sandbox, develop changes, refresh the developer's sandbox, deploy to the common sandbox, test

changes

Answer: A

Explanation:

The best deployment strategy for UC to use in this environment is to refresh the developer's sandbox, develop changes, refresh the common sandbox, deploy to the common sandbox, test changes, as this will ensure that the developer's sandbox has the latest production data and metadata, and that the common sandbox has the latest production data and metadata as well as the developer's changes, before testing and deploying to production. Option B is not correct, as refreshing the developer's sandbox after testing the changes will erase the changes and make them unavailable for deployment to the common sandbox. Option C is not correct, as refreshing the developer's sandbox after developing the changes will erase the changes and make them unavailable for deployment to the common sandbox. Option D is not correct, as refreshing the common sandbox before developing the changes will make the common sandbox out of sync with the production data and metadata.

NEW QUESTION # 42

Universal Containers is delivering many changes to its Salesforce system. Adoption reports are discovering that many features are unused. The steering committee wants this to change and is looking to the architect for advice. What should an architect recommend to overcome this?

- A. Stop development until current features start being used.
- **B. Adopting user centered design to understand user needs before building the solution.**
- C. Sending weekly communication emails reporting on least engaged users
- D. Using Lightning Web Components for every user interface.

Answer: B

NEW QUESTION # 43

The team at Universal Containers is building an application on Java that will interact with its Salesforce application. They want to use SOQL queries to retrieve and make changes to smaller pieces of Salesforce metadata through this application. Which API should the team leverage?

- A. Any Salesforce API
- B. Metadata API
- C. User Interface API
- **D. Tooling API**

Answer: D

NEW QUESTION # 44

.....

The Development-Lifecycle-and-Deployment-Architect study guide to good meet user demand, will be a little bit of knowledge to separate memory, every day we have lots of fragments of time, such as waiting in line to take when you eat, or time in buses commute on the way by subway every day, but when you add them together will be surprised to find a day we can make use of the time is so much debris. We have three version of our Development-Lifecycle-and-Deployment-Architect Exam Questions which can let you study at every condition so that you can make full use of your time. And you will get the Development-Lifecycle-and-Deployment-Architect certification for sure.
