

# IAPP AIGP Exam Dumps Demo - Relevant AIGP Questions

DOWNLOAD the newest ExamsLabs AIGP PDF dumps from Cloud Storage for free: [https://drive.google.com/open?id=1-OOZKEM\\_0MSVYzYOD75Z4Lys79nMhZjS](https://drive.google.com/open?id=1-OOZKEM_0MSVYzYOD75Z4Lys79nMhZjS)

The content of our AIGP practice engine is based on real exam by whittling down superfluous knowledge without delinquent mistakes rather than dropping out of reality. Being subjected to harsh tests of market, our AIGP exam questions are highly the manifestation of responsibility carrying out the tenets of customer oriented. And our AIGP Study Materials are warmly praised and welcomed by the customers all over the world.

All operating systems also support this web-based AIGP practice test. The third format is desktop IAPP AIGP practice exam software that can be accessed easily after installing it on your Windows PC or Laptop. These formats are there so that the students can use them as per their unique needs and prepare successfully for IAPP Certified Artificial Intelligence Governance Professional (AIGP) the on first try.

## Get 1 year Free Updates with AIGP Exam Questions

As a matter of fact, since the establishment, we have won wonderful feedback and ceaseless business, continuously working on developing our AIGP test prep. We have been specializing AIGP exam dumps many years and have a great deal of long-term old clients, and we would like to be a reliable cooperater on your learning path and in your further development. While you are learning with our AIGP Quiz guide, we hope to help you make out what obstacles you have actually encountered during your approach for AIGP exam torrent through our PDF version, only in this way can we help you win the AIGP certification in your first attempt.

## IAPP AIGP Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• <b>Understanding How Laws, Standards, and Frameworks Apply to AI:</b> This section of the exam measures skills of compliance officers and covers the application of existing and emerging legal requirements to AI systems. It explores how data privacy laws, intellectual property, non-discrimination, consumer protection, and product liability laws impact AI. The domain also examines the main elements of the EU AI Act, such as risk classification and requirements for different AI risk levels, as well as enforcement mechanisms. Furthermore, it addresses the key industry standards and frameworks, including OECD principles, NIST AI Risk Management Framework, and ISO AI standards, guiding organizations in trustworthy and compliant AI implementation.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Understanding the Foundations of AI Governance:</b> This section of the exam measures skills of AI governance professionals and covers the core concepts of AI governance, including what AI is, why governance is needed, and the risks and unique characteristics associated with AI. It also addresses the establishment and communication of organizational expectations for AI governance, such as defining roles, fostering cross-functional collaboration, and delivering training on AI strategies. Additionally, it focuses on developing policies and procedures that ensure oversight and accountability throughout the AI lifecycle, including managing third-party risks and updating privacy and security practices.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Understanding How to Govern AI Deployment and Use:</b> This section of the exam measures skills of technology deployment leads and covers the responsibilities associated with selecting, deploying, and using AI models in a responsible manner. It includes evaluating key factors and risks before deployment, understanding different model types and deployment options, and ensuring ongoing monitoring and maintenance. The domain applies to both proprietary and third-party AI models, emphasizing the importance of transparency, ethical considerations, and continuous oversight throughout the model's operational life.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Understanding How to Govern AI Development:</b> This section of the exam measures the skills of AI project managers and covers the governance responsibilities involved in designing, building, training, testing, and maintaining AI models. It emphasizes defining the business context, performing impact assessments, applying relevant laws and best practices, and managing risks during model development. The domain also includes establishing data governance for training and testing, ensuring data quality and provenance, and documenting processes for compliance. Additionally, it focuses on preparing models for release, continuous monitoring, maintenance, incident management, and transparent disclosures to stakeholders.</li> </ul>

## IAPP Certified Artificial Intelligence Governance Professional Sample Questions (Q99-Q104):

### NEW QUESTION # 99

#### CASE STUDY

Please use the following to answer the next question:

You have recently assumed the role of AI Governance leader for a California-based medical technology company. The organization primarily serves hospitals and has recently expanded to include walk-in clinics located within local pharmacies.

The company's core business focuses on diagnostic assistance powered by a large language model LLM and back-office process optimization using Agentic AI, including chatbots, medical record request handling, scheduling and billing.

In preparation for its next round of funding, the board has asked you to prepare an AI Risk report to demonstrate to investors how the company is addressing AI-related risks. In preparing the report you learn that last year the company generated 30 million dollars in gross revenue across the US, EU, India, and South Korea and that vendors are engaged for various activities, including model testing and providing third-party AI solutions for chatbots.

Which of the following responses is least likely to meet mandatory transparency requirements in any of the applicable laws?

- A. A pop-up message that alerts patients when they are interacting with a chatbot.
- B. A model card provided to healthcare providers.
- C. A label at the bottom of patient summaries that indicates an AI tool assisted in generating the summary.
- **D. A link to the company's AI policy and AI code of conduct clearly placed on the company's website.**

**Answer: D**

Explanation:

The correct answer is C because simply publishing a general AI policy or code of conduct does not satisfy specific transparency

obligations required by AI regulations. Transparency requirements focus on providing clear, context-specific disclosures to affected individuals about how AI is being used, particularly when it directly impacts them. For example, notifying users when they are interacting with an AI system or labeling AI-generated content are explicit transparency measures aligned with regulatory expectations. The AI Governance in Practice Report highlights that transparency includes informing users when they interact with AI systems and providing meaningful information about outputs and system behavior. Model cards and labels support system-level and output-level transparency, while real-time notices ensure user awareness. In contrast, a general policy link lacks immediacy, specificity, and user relevance, making it insufficient for mandatory transparency compliance.

### NEW QUESTION # 100

What is a primary liability concern when a company deploys a proprietary Agentic AI model?

- A. Greater public scrutiny due to external model hosting.
- B. Dependence on open-source software for orchestration.
- C. Direct accountability for harmful or deceptive agent behavior.
- D. Lack of available APIs for memory integration.

**Answer: C**

Explanation:

The correct answer is A because deploying a proprietary agentic AI model places direct responsibility on the organization for the actions and outcomes of that system. AI governance frameworks emphasize accountability as a core principle, meaning organizations must take responsibility for harms caused by their AI systems, including misleading, biased, or unsafe outputs. Agentic AI systems, which can act autonomously and make decisions, introduce heightened liability risks because their behavior may directly impact users or third parties. Regulatory approaches increasingly focus on ensuring that deployers cannot shift responsibility, especially when the system is proprietary and under their control. The other options relate to operational or technical considerations, not primary legal liability. Ensuring accountability for AI behavior is central to compliance, risk management, and maintaining trust.

### NEW QUESTION # 101

#### CASE STUDY

Please use the following to answer the next question:

Good Values Corporation (GVC) is a U.S. educational services provider that employs teachers to create and deliver enrichment courses for high school students. GVC has learned that many of its teacher employees are using generative AI to create the enrichment courses, and that many of the students are using generative AI to complete their assignments.

In particular, GVC has learned that the teachers they employ used open source large language models ("LLM") to develop an online tool that customizes study questions for individual students.

GVC has also discovered that an art teacher has expressly incorporated the use of generative AI into the curriculum to enable students to use prompts to create digital art.

GVC has started to investigate these practices and develop a process to monitor any use of generative AI, including by teachers and students, going forward.

Which of the following risks should be of the highest concern to individual teachers using generative AI to ensure students learn the course material?

- A. Financial cost.
- B. Technical complexity.
- C. Model accuracy.
- D. Copyright infringement.

**Answer: C**

Explanation:

Model accuracy is critical because teachers need to ensure the AI-generated content is correct and educationally valid for students to truly learn the material.

### NEW QUESTION # 102

A company initially intended to use a large data set containing personal information to train an AI model.

After consideration, the company determined that it can derive enough value from the data set without any personal information and permanently obfuscated all personal data elements before training the model.

This is an example of applying which privacy-enhancing technique (PET)?

- **A. Anonymization.**
- B. Federated learning.
- C. Differential privacy.
- D. Pseudonymization.

**Answer: A**

Explanation:

Anonymization is a privacy-enhancing technique that involves removing or permanently altering personal data elements to prevent the identification of individuals. In this case, the company obfuscated all personal data elements before training the model, which aligns with the definition of anonymization. This ensures that the data cannot be traced back to individuals, thereby protecting their privacy while still allowing the company to derive value from the dataset. Reference: AIGP Body of Knowledge, privacy-enhancing techniques section.

### NEW QUESTION # 103

All of the following issues are unique for proprietary AI model deployments EXCEPT?

- A. The necessity of performing conformity assessments.
- B. The cost of AI chips.
- **C. The potential for bias.**
- D. The acquisition of training data.

**Answer: C**

Explanation:

Bias is a common risk across both proprietary and open-source models, and not unique to proprietary deployments. All AI systems - regardless of origin - require evaluation for fairness, accuracy, and representativeness.

From the AI Governance in Practice Report 2024:

"Bias, discrimination and fairness challenges are present in both open and closed models, regardless of how the model is sourced." (p. 41)

### NEW QUESTION # 104

.....

This format is for candidates who do not have the time or energy to use a computer or laptop for preparation. The IAPP AIGP PDF file includes real IAPP AIGP questions, and they can be easily printed and studied at any time. ExamsLabs regularly updates its PDF file to ensure that its readers have access to the updated questions.
