2026 Latest BootcampPDF DOP-C02 PDF Dumps and DOP-C02 Exam Engine Free Share: <https://drive.google.com/open?id=1K7-a4s-GgYfrun9iSVX9lr3xTXluO66H>

We offer free demos of the DOP-C02 exam braindumps for your reference before you pay for them, for there are three versions of the DOP-C02 practice engine so that we also have three versions of the free demos. And we will send you the new updates if our experts make them freely. On condition that you fail the exam after using our DOP-C02 Study Guide unfortunately, we will switch other versions for you or give back full of your refund. All we do and the promises made are in your perspective.

We need fresh things to enrich our life. No one would like to be choked by dull routines. So if you are tired of your job or life, you are advised to try our DOP-C02 study guide to refresh yourself. It is a wrong idea that learning is useless and dull. We can make promise that you will harvest enough knowledge and happiness from our DOP-C02 Test Engine. Different from traditional learning methods, our products adopt the latest technology to improve your learning experience. We hope that all candidates can try our free demo before deciding buying our DOP-C02 practice test. In a word, our study guide is attractive to clients in the market.

DOP-C02 Latest Mock Test | New DOP-C02 Test Book

As is known to us, there are best sale and after-sale service of the DOP-C02 certification training materials all over the world in our company. Our company has employed a lot of excellent experts and professors in the field in the past years, in order to design the best and most suitable DOP-C02 Latest Questions for all customers. More importantly, it is evident to all that the DOP-C02 training materials from our company have a high quality, and we can make sure that the quality of our DOP-C02 exam questions will be higher than other study materials in the market.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q232-Q237):

NEW QUESTION # 232

A company is performing vulnerability scanning for all Amazon EC2 instances across many accounts. The accounts are in an organization in AWS Organizations. Each account's VPCs are attached to a shared transit gateway. The VPCs send traffic to the internet through a central egress VPC. The company has enabled Amazon Inspector in a delegated administrator account and has enabled scanning for all member accounts.

A DevOps engineer discovers that some EC2 instances are listed in the "not scanning" tab in Amazon Inspector. Which combination of actions should the DevOps engineer take to resolve this issue? (Choose three.)

- A. Configure EC2 Instance Connect for the EC2 instances that Amazon Inspector is not scanning.
- B. Verify that AWS Systems Manager Agent is installed and is running on the EC2 instances that Amazon Inspector is not scanning.
- C. Create a managed-instance activation. Use the Activation Code and the Activation ID to register the EC2 instances.
- D. Associate the target EC2 instances with instance profiles that grant permissions to communicate with AWS Systems Manager.
- E. Associate the target EC2 instances with security groups that allow outbound communication on port 443 to the AWS Systems Manager service endpoint.
- F. Grant inspector:StartAssessmentRun permissions to the IAM role that the DevOps engineer is using.

Answer: B,D,E

Explanation:

<https://docs.aws.amazon.com/inspector/latest/user/scanning-ec2.html>

NEW QUESTION # 233

A company has deployed an application in a single AWS Region. The application backend uses Amazon DynamoDB tables and Amazon S3 buckets.

The company wants to deploy the application in a secondary Region. The company must ensure that the data in the DynamoDB tables and the S3 buckets persists across both Regions. The data must also immediately propagate across Regions.

Which solution will meet these requirements with the MOST operational efficiency?

- A. Implement two-way S3 bucket replication between the primary Region's S3 buckets and the secondary Region's S3 buckets. Convert the DynamoDB tables into global tables. Set the secondary Region as the additional Region.
- B. Implement S3 Batch Operations copy jobs between the primary Region and the secondary Region for all S3 buckets. Convert the DynamoDB tables into global tables. Set the secondary Region as the additional Region.
- C. Implement S3 Batch Operations copy jobs between the primary Region and the secondary Region for all S3 buckets. Enable DynamoDB streams on the DynamoDB tables in both Regions. In each Region, create an AWS Lambda function that subscribes to the DynamoDB streams. Configure the Lambda function to copy new records to the DynamoDB tables in the other Region.
- D. Implement two-way S3 bucket replication between the primary Region's S3 buckets and the secondary Region's S3 buckets. Enable DynamoDB streams on the DynamoDB tables in both Regions. In each Region, create an AWS Lambda function that subscribes to the DynamoDB streams. Configure the Lambda function to copy new records to the DynamoDB tables in the other Region.

Answer: A

Explanation:

The company needs multi-Region data persistence with immediate propagation and minimal operational overhead. For S3, the correct mechanism is S3 replication (Cross-Region Replication or Same-Region Replication), which continuously and asynchronously replicates new objects as they are written. Configuring two-way replication between the primary and secondary Region buckets ensures that objects written in either Region are replicated to the other automatically without custom code. For DynamoDB, the native solution for multi-Region replication is DynamoDB global tables. Global tables provide multi-master, multi-Region replication with low-latency reads and writes in each Region and automatic propagation of changes. Converting existing tables into global tables and adding the secondary Region as a replica gives immediate, managed cross-Region replication with minimal maintenance.

Option A combines these two fully managed features: two-way S3 replication and DynamoDB global tables.

This yields the highest operational efficiency.

Options B, C, and D rely on S3 Batch Operations or DynamoDB Streams + Lambda to manually copy data cross-Region. These

approaches add complexity, custom code, and operational risk, and they are less suitable when AWS provides managed replication mechanisms specifically designed for this purpose.

Therefore, Option A is the correct and most efficient solution.

NEW QUESTION # 234

A company uses AWS Secrets Manager to store a set of sensitive API keys that an AWS Lambda function uses. When the Lambda function is invoked, the Lambda function retrieves the API keys and makes an API call to an external service. The Secrets Manager secret is encrypted with the default AWS Key Management Service (AWS KMS) key.

A DevOps engineer needs to update the infrastructure to ensure that only the Lambda function's execution role can access the values in Secrets Manager. The solution must apply the principle of least privilege.

Which combination of steps will meet these requirements? (Select TWO.)

- **A. Update the default KMS key for Secrets Manager to allow only the Lambda function's execution role to decrypt.**
- B. Create a KMS customer managed key that trusts Secrets Manager and allows the Lambda function's execution role to decrypt. Update Secrets Manager to use the new customer managed key.
- C. Create a KMS customer managed key that trusts Secrets Manager and allows the account's root principal to decrypt. Update Secrets Manager to use the new customer managed key.
- **D. Ensure that the Lambda function's execution role has the KMS permissions scoped on the resource level. Configure the permissions so that the KMS key can encrypt the Secrets Manager secret.**
- E. Remove all KMS permissions from the Lambda function's execution role.

Answer: A,D

NEW QUESTION # 235

A company is divided into teams. Each team has an AWS account and all the accounts are in an organization in AWS Organizations. Each team must retain full administrative rights to its AWS account. Each team also must be allowed to access only AWS services that the company approves for use. AWS services must gain approval through a request and approval process.

How should a DevOps engineer configure the accounts to meet these requirements?

- A. Use AWS Control Tower to provision the accounts into OUs within the organization. Configure AWS Control Tower to enable AWS IAM Identity Center (AWS Single Sign-On). Configure IAM Identity Center to provide administrative access. Include deny policies on user roles for restricted AWS services.
- B. Create an SCP that allows access to only approved AWS services. Attach the SCP to the root OU of the organization. Remove the FullAWSAccess SCP from the root OU of the organization.
- **C. Place all the accounts under a new top-level OU within the organization. Create an SCP that denies access to restricted AWS services. Attach the SCP to the OU.**
- D. Use AWS CloudFormation StackSets to provision IAM policies in each account to deny access to restricted AWS services. In each account, configure AWS Config rules that ensure that the policies are attached to IAM principals in the account.

Answer: C

Explanation:

Explanation

<https://docs.aws.amazon.com/vpc/latest/userguide/managed-prefix-lists.html> A managed prefix list is a set of one or more CIDR blocks. You can use prefix lists to make it easier to configure and maintain your security groups and route tables.

<https://docs.aws.amazon.com/vpc/latest/userguide/sharing-managed-prefix-lists.html> With AWS Resource Access Manager (AWS RAM), the owner of a prefix list can share a prefix list with the following: Specific AWS accounts inside or outside of its organization in AWS Organizations An organizational unit inside its organization in AWS Organizations An entire organization in AWS Organizations

NEW QUESTION # 236

A company discovers that its production environment and disaster recovery (DR) environment are deployed to the same AWS Region. All the production applications run on Amazon EC2 instances and are deployed by AWS CloudFormation. The applications use an Amazon FSx for NetApp ONTAP volume for application storage. No application data resides on the EC2 instances. A DevOps engineer copies the required AMIs to a new DR Region. The DevOps engineer also updates the CloudFormation code to accept a Region as a parameter. The storage needs to have an RPO of 10 minutes in the DR Region. Which solution will meet these

requirements?

- A. Use AWS Backup to create a backup vault and a custom backup plan that has a 10-minute frequency. Specify the DR Region as the target Region. Assign the EC2 instances in the production Region to the backup plan.
- B. Create an AWS Lambda function to create snapshots of the instance store volumes that are attached to the EC2 instances. Configure the Lambda function to copy the snapshots to the DR Region and to remove the previous copies. Create an Amazon EventBridge scheduled rule that invokes the Lambda function every 10 minutes.
- C. Create an Amazon S3 bucket in both Regions. Configure S3 Cross-Region Replication (CRR) for the S3 buckets. Create a scheduled AWS Lambda function to copy any new content from the FSx for ONTAP volume to the S3 bucket in the production Region.
- **D. Create an FSx for ONTAP instance in the DR Region. Configure a 5-minute schedule for a volume- level NetApp SnapMirror to replicate the volume from the production Region to the DR Region.**

Answer: D

NEW QUESTION # 237

.....

First and foremost, even though our company has become the staunch force in this field for almost ten years and our DOP-C02 exam questions have enjoyed such a quick sale in the international market we still keep an affordable price for our customers. Second, we have prepared free demo in this website for our customers to have the first-hand experience of the DOP-C02 Latest Torrent compiled by our company before making their final decision. So do not hesitate any more, just hurry up to buy our DOP-C02 test question which will never let you down.

DOP-C02 Latest Mock Test: https://www.bootcamppdf.com/DOP-C02_exam-dumps.html

Once you have used our DOP-C02 online test dumps, you can learn with it no matter where you are next time, In order to help all of you to get the efficient preparation and pass Amazon DOP-C02 the exam is the dream we are doing our best to achieve, We guarantee that if you fail the exam we will refund all money to you that you pay on the braindumps for DOP-C02 certification, All necessary elements are included in our DOP-C02 practice materials.

I get this question from photographers all the time, His activities are related DOP-C02 to designing and implementing solutions based on Integration Services and Analysis Services for the financial, manufacturing and statistical areas.

Maximize Your Success with BootcampPDF Customizable Amazon DOP-C02 Practice Test

Once you have used our DOP-C02 Online Test dumps, you can learn with it no matter where you are next time, In order to help all of you to get the efficient preparation and pass Amazon DOP-C02 the exam is the dream we are doing our best to achieve.

We guarantee that if you fail the exam we will refund all money to you that you pay on the braindumps for DOP-C02 certification, All necessary elements are included in our DOP-C02 practice materials.

You will not regret to buy our exam guide because our company always focuses on providing the best service and DOP-C02 exam bootcamp for our customers.
