

# Practice SSE-Engineer Online | New SSE-Engineer Braindumps Ebook

DOWNLOAD the newest BootcampPDF SSE-Engineer PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=19P8m9MS--eOBWOaYdeakjYUCyqY2Yd>

With the efforts of our IT professional experts, BootcampPDF SSE-Engineer new practice questions pdf can guarantee you 99.9% first time pass rate. The SSE-Engineer questions & answers are verified and checked by our experienced IT experts. With the SSE-Engineer Latest Exam Simulator, you can attend your exam with relax and pleasure mood. Thus, the SSE-Engineer valid and latest dumps together with positive attitude will contribute to your Palo Alto Networks SSE-Engineer actual test.

BootcampPDF aims to assist its clients in making them capable of passing the Palo Alto Networks SSE-Engineer certification exam with flying colors. It fulfills its mission by giving them an entirely free Palo Alto Networks Security Service Edge Engineer (SSE-Engineer) demo of the dumps. Thus, this demonstration will enable them to scrutinize the quality of the Palo Alto Networks SSE-Engineer Study Material. Your opportunity to survey the Palo Alto Networks SSE-Engineer exam questions before buying it will relax your nerves. The guarantee to give you the money back according to terms and conditions is one of the remarkable facilities of the BootcampPDF.

## Useful Palo Alto Networks - SSE-Engineer - Practice Palo Alto Networks Security Service Edge Engineer Online

Our Palo Alto Networks Security Service Edge Engineer exam question has been widely praised by all of our customers in many countries and our company has become the leader in this field. Our product boost varied functions and they include the self-learning and the self-assessment functions, the timing function and the function to stimulate the exam to make you learn efficiently and easily. There are many advantages of our SSE-Engineer Study Tool.

### Palo Alto Networks SSE-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Prisma Access Troubleshooting: This section of the exam measures the skills of Technical Support Engineers and covers the monitoring and troubleshooting of Prisma Access environments. It includes the use of Prisma Access Activity Insights, real-time alerting, and a Command Center for visibility. Candidates are expected to troubleshoot connectivity issues for mobile users, remote networks, service connections, and ZTNA connectors. It also focuses on resolving traffic enforcement problems including security policies, HIP enforcement, User-ID mismatches, and split tunneling performance issues.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• Prisma Access Administration and Operation: This section of the exam measures the skills of IT Operations Managers and focuses on managing Prisma Access using Panorama and Strata Cloud Manager. It tests knowledge of multitenancy, access control, configuration, and version management, and log reporting. Candidates should be familiar with releasing upgrades and leveraging SCM tools like Copilot. The section also evaluates the deployment of the Strata Logging Service and its integration with Panorama and SCM, log forwarding configurations, and best practice assessments to maintain security posture and compliance.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Prisma Access Services: This section of the exam measures the skills of Cloud Security Architects and covers advanced features within Prisma Access. Candidates are assessed on how to configure and implement enhancements like App Acceleration, traffic replication, IoT security, and privileged remote access. It also includes implementing SaaS security and setting up effective policies related to security, decryption, and QoS. The section further evaluates how to create and manage user-based policies using tools like the Cloud Identity Engine and User ID for proper identity mapping and authentication.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Prisma Access Planning and Deployment: This section of the exam measures the skills of Network Security Engineers and covers foundational knowledge and deployment skills related to Prisma Access architecture. Candidates must understand key components such as security processing nodes, IP addressing, DNS, and compute locations. It evaluates routing mechanisms including routing preferences, backbone routing, and traffic steering. The section also focuses on deploying Prisma Access service infrastructure for mobile users using VPN clients or explicit proxy and configuring remote networks. Additional topics include enabling private application access using service connections, Colo-Connect, and ZTNA connectors, implementing identity authentication methods like SAML, Kerberos, and LDAP, and deploying Prisma Access Browser for secure user access.</li> </ul>

## Palo Alto Networks Security Service Edge Engineer Sample Questions (Q44-Q49):

### NEW QUESTION # 44

How can a senior engineer use Strata Cloud Manager (SCM) to ensure that junior engineers are able to create compliant policies while preventing the creation of policies that may result in security gaps?

- A. Configure an auto tagging rule in SCM to trigger a Security policy review workflow based on a security rule tag, then instruct junior engineers to use this tag for all new Security policies.
- B. Use security checks under posture settings and set the action to "deny" for all checks that do not meet the compliance standards.
- C. Configure role-based access controls (RBACs) for all junior engineers to limit them to creating policies in a disabled state, manually review the policies, and enable them using a senior engineer role.
- D. Run a Best Practice Assessment (BPA) at regular intervals and manually revert any policies not meeting company compliance standards.

**Answer: B**

Explanation:

By using security checks under posture settings in Strata Cloud Manager (SCM), the senior engineer can enforce policy compliance standards by automatically denying any security policy that does not align with best practices. This ensures that junior engineers can create policies while preventing configurations that might introduce security gaps. This proactive approach eliminates manual oversight and enforces compliance at the time of policy creation, reducing risk and ensuring consistent security enforcement.

### NEW QUESTION # 45

Which two actions can a company with Prisma Access deployed take to use the Egress IP API to automate policy rule updates when the IP addresses used by Prisma Access change? (Choose two.)

- A. Enable the Egress IP API endpoint in Prisma Access.
- B. Download a client certificate to authenticate to the Egress IP API.
- C. Copy the Egress IP API Key in the service infrastructure settings.
- D. Configure a webhook to receive notifications of IP address changes.

**Answer: B,D**

Explanation:

Configuring a webhook allows the company to receive real-time notifications when Prisma Access changes its egress IP addresses, ensuring that policy rules are updated automatically. Downloading a client certificate is necessary for authentication to the Egress IP API, allowing secure API access for retrieving updated IP addresses. These actions ensure that security policies remain effective without manual intervention.

#### NEW QUESTION # 46

A company has four branch offices between Canada Central and Canada East which use the same IPSec termination node and have QoS configured with customized bandwidth per site. An engineer wants to onboard a new branch office on the same IPSec termination node.

What is the QoS behavior for the new branch office?

- A. Automatically distributed to 20% for each site
- **B. Unallocated until manually assigned**
- C. Automatically distributed to 25% for each site
- D. Cannot be added to existing QoS configuration

**Answer: B**

Explanation:

When onboarding a new branch office to an existing IPSec termination node in Prisma Access, the QoS bandwidth is not automatically assigned. Instead, the newly added branch remains unallocated until the administrator manually assigns bandwidth within the QoS configuration settings. This ensures that customized bandwidth per site remains intact and allows for fine-tuned traffic management based on business needs.

#### NEW QUESTION # 47

A customer is implementing Prisma Access (Managed by Strata Cloud Manager) to connect mobile users, branch locations, and business-to-business (B2B) partners to their data centers.

The solution must meet these requirements:

The mobile users must have internet filtering, data center connectivity, and remote site connectivity to the branch locations.

The branch locations must have internet filtering and data center connectivity.

The B2B partner connections must only have access to specific data center internally developed applications running on non-standard ports.

The security team must have access to manage the mobile user and access to branch locations.

The network team must have access to manage only the partner access.

How should Prisma Access be implemented to meet the customer requirements?

- **A. Deploy two Prisma Access instances - the first with mobile users, remote networks, and private access for all internal connection types, and the second with remote networks and private application access for B2B connections - and use the specific configuration scope for the connection type to manage access.**
- B. Deploy a Prisma Access instance with mobile users, remote networks, and private access for all connection types, and use the Prisma Access Configuration scope to manage all access.
- C. Deploy two Prisma Access instances - the first with mobile users, remote networks, and private access for all internal connection types, and the second with remote networks and private application access for B2B connections - and use the Strata Multitenant Cloud Manager Prisma Access configuration scope to manage access.
- D. Deploy a Prisma Access instance with mobile users, remote networks, and private access for all connection types, and use the specific configuration scope for the connection type to manage access.

**Answer: A**

Explanation:

To meet the customer's requirements, two separate Prisma Access instances should be deployed:

\* Instance 1 should include mobile users, remote networks, and private access for internal connectivity.

This ensures that mobile users can access the internet, data centers, and remote branch locations while enforcing security policies.

\* Instance 2 should be configured with remote networks and private application access for B2B connections. This instance will restrict access to only the required internally developed applications using non-standard ports, ensuring that partners cannot access other corporate resources.

By using specific configuration scopes for different connection types, the security team can manage access to mobile users and branch locations, while the network team can manage B2B partner connections. This ensures proper segmentation of management responsibilities while maintaining security and compliance.

#### NEW QUESTION # 48

A customer is implementing Prisma Access (Managed by Strata Cloud Manager) to connect mobile users, branch locations, and business-to-business (B2B) partners to their data centers.

The solution must meet these requirements:

The mobile users must have internet filtering, data center connectivity, and remote site connectivity to the branch locations.

The branch locations must have internet filtering and data center connectivity.

The B2B partner connections must only have access to specific data center internally developed applications running on non-standard ports.

The security team must have access to manage the mobile user and access to branch locations.

The network team must have access to manage only the partner access.

Which two options will allow the engineer to support the requirements? (Choose two.)

- A. Configure the CPE with Static Routes pointing to Prisma Access Infrastructure and Mobile User routes.
- **B. Configure Remote Networks and define the branch IP subnets using Static Routes.**
- **C. Enable eBGP for dynamic routing and configure Remote Networks.**
- D. Enable Remote Networks Advertise Default Route.

**Answer: B,C**

Explanation:

Enabling eBGP for dynamic routing and configuring Remote Networks ensures seamless connectivity between branch locations, mobile users, and the data center. eBGP allows Prisma Access to dynamically exchange routes with the Customer Premises Equipment (CPE), optimizing path selection without requiring manual updates. Configuring Remote Networks and defining branch IP subnets using static routes ensures controlled and segmented routing, aligning with security policies. This setup provides proper internet filtering, data center connectivity, and restricted access for B2B partners while keeping management responsibilities aligned.

#### NEW QUESTION # 49

.....

If you purchasing our SSE-Engineer simulating questions, you will get a comfortable package services afforded by our considerate after-sales services. We respect your needs toward the useful SSE-Engineer practice materials by recommending our SSE-Engineer Guide preparations for you. And we give you kind and professional supports by 24/7, as long as you can have problems on our SSE-Engineer study guide, then you can contact with us.
