Citrix Virtual Apps and Desktops Administration Sample Questions (Q11-Q16):

NEW QUESTION # 11
On which two components must the Secure Ticket Authority (STA) server locations be configured if a Citrix Administrator wants to configure secure external access to a Citrix Virtual Apps and Desktops Site? (Choose two.)

- A. Citrix Workspace app
- B. Delivery Controller
- C. StoreFront
- D. NetScaler Gateway
- E. Virtual Delivery Agent (VDA)

Answer: C,D

Explanation:
The Secure Ticket Authority (STA) server locations must be configured on both the NetScaler Gateway and StoreFront. This ensures that tickets generated by the STA (on the Delivery Controllers) are validated consistently, enabling secure external access to Citrix resources.

NEW QUESTION # 12
A Citrix Administrator has enabled an HDX Session printers policy within a Citrix Virtual Apps and Desktops Site. The administrator added a printer to a print server and assigned the printer to all users through a session printer policy.
In addition, several local client printers are auto-created within HDX sessions. No other printing policies are configured. How will print jobs be routed when users send print jobs to a printer managed by the print server?

- A. Directly from the session Virtual Delivery Agent (VDA) machine to the printer
- B. Directly to the network print server and then to the specified printer
- C. Over the HDX virtual channel to the specified printer attached to the print server
- D. Over the HDX virtual channel, through the endpoint, and then to the print server

Answer:

Explanation:
When using session printers from a print server, print jobs are routed directly from the VDA to the network print server, which then forwards them to the physical printer. The HDX virtual channel is only used for client printers, not for print server-based session printers.

NEW QUESTION # 13
A user complains to a Citrix Administrator that application load time is long when they log on at the beginning of the work day.
Which feature can the administrator enable to reduce the perceived start time of the user's application?

- A. Application Prelaunch
- B. Application Lingering
- C. Application Keyword
- D. Application Limits

Answer: A

Explanation:
Application Prelaunch starts an application session in the background before the user explicitly launches it. This reduces perceived application load time, especially at the beginning of the work day, by keeping sessions ready for faster access.

Which PowerShell command should a Citrix Administrator run to obtain the name of a deployment, the local host cache configuration and the license level?

- A. Get-BrokerSite
