What Database expression transforms the input to the output?

- A. ☐
- B. ☐
- C. ☒
- D. ☐

Answer: C

Explanation:

This kind of questions are best solved with filtering technique. Key thing to note here is XML attributes are always accessed by @ notation. So in this example orderId can be accessed as @OrderId which makes option 3 and option 4 false. Now difference in option 1 and option 2 is in mapping of lineItemPrice. Correct syntax to format a String in Number is value.price as Number. Hence option 2 is correct.
