## Authoritative Exam CloudSec-Pro Tutorials - Pass CloudSec-Pro in One Time - Complete Vce CloudSec-Pro File

Our company is a multinational company with sales and after-sale service of CloudSec-Pro exam torrent compiling departments throughout the world. In addition, our company has become the top-notch one in the fields, therefore, if you are preparing for the exam in order to get the related CloudSec-Pro certification, then the CloudSec-Pro Exam Question compiled by our company is your solid choice. All employees worldwide in our company operate under a common mission: to be the best global supplier of electronic CloudSec-Pro exam torrent for our customers to pass the CloudSec-Pro exam.

## Palo Alto Networks Cloud Security Professional Sample Questions (Q221-Q226):

**NEW QUESTION # 221**
Which option shows the steps to install the Console in a Kubernetes Cluster?

- A. Download the Console and Defender image Download YAML for Defender from the document site Deploy Defender YAML using kubectl
- B. Download and extract release tarball Download the YAML for Console Deploy Console YAML using kubectl
- C. Download the Console and Defender image Generate YAML for DefenderDeploy Defender YAML using kubectl
- D. Download and extract release tarball Generate YAML for ConsoleDeploy Console YAML using kubectl

**Answer: D**

Explanation:
The installation of the Prisma Cloud Console in a Kubernetes cluster involves a series of steps that start with preparing the necessary deployment configurations, typically provided as YAML files. The process begins by downloading and extracting the release tarball, which contains the necessary files and instructions for the deployment. After extracting the tarball, you generate YAML files for the Console deployment. These YAML files define the Kubernetes resources needed to deploy and run the Console, such as Deployments, Services, and ConfigMaps. Finally, you deploy the Console by applying the generated YAML files using the kubectl command, which communicates with the Kubernetes API to create the specified resources in your cluster.

This process is aligned with Kubernetes best practices for deploying applications and is indicative of the steps required for deploying complex applications like the Prisma Cloud Console. The method ensures that all necessary configurations and dependencies are correctly defined and deployed in the Kubernetes environment.

**NEW QUESTION # 222**
What must be created in order to receive notifications about alerts generated when the operator is away from the Prisma Cloud Console?

- A. Notification rule
- B. Alert rule
- C. Alarm rule
- D. Offline alert

**Answer: B**

Explanation:
https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/manage-prisma-cloud-alerts
/prisma-cloud-alert-notifications

**NEW QUESTION # 223**
Which two attributes of policies can be fetched using API? (Choose two.)

- A. policy violation
- B. policy label
- C. policy mode
- D. policy signature

**Answer: B,C**

Explanation:
Using the Prisma Cloud API, users can fetch various attributes of policies, including the policy label (Option A) and policy mode (Option C). The policy label helps in categorizing and organizing policies, while the policy mode determines how the policy is enforced (e.g., alert, enforce). The policy signature (Option B) is not a standard attribute exposed via the API for fetching, as it relates more to the internal identification and handling of policies. The policy violation (Option D) is an outcome or event resulting from a policy breach, not an attribute of the policy itself that can be fetched via the API.

**NEW QUESTION # 224**
When an alert notification from the alarm center is deleted, how many hours will a similar alarm be suppressed by default?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: C**

Explanation:
Click Delete if you want to remove the notification from the alarm center. Once deleted, a similar alarm will not appear for the next 24 hours, if the same error occurs in that time period. After 24 hours, a similar error will generate a new alarm notification.
https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud- admin/manage-prisma-cloud-alarms/review-alarms

**NEW QUESTION # 225**
When would a policy apply if the policy is set under Defend > Vulnerability > Images > Deployed?

- A. when a serverless repository is scanned
- B. when the Image is built and when a Container is started form an Image

- C. when the Image is built
- D. when a Container is started form an Image

**Answer: D**

Explanation:
In Prisma Cloud, policies set under "Defend > Vulnerability > Images > Deployed" are specifically designed to apply at runtime, i.e., when a container is instantiated from an image. This ensures that any image, regardless of its point of origin or creation time, is evaluated against the defined vulnerability policies at the time it is deployed as a container in the environment. This runtime enforcement is crucial for catching vulnerabilities that may not have been present or detected during the image build phase, providing an additional layer of security for running applications.
