## Fortinet FCSS - FortiSASE 24 Administrator Sample Questions (Q45-Q50):

### NEW QUESTION # 45

What are two advantages of using zero-trust tags? (Choose two.)

- A. Zero-trust tags can be used to create multiple endpoint profiles which can be applied to different endpoints
- B. Zero-trust tags can be used to allow secure web gateway (SWG) access
- C. Zero-trust tags can determine the security posture of an endpoint.
- D. Zero-trust tags can be used to allow or deny access to network resources

**Answer: C,D**

Explanation:

Zero-trust tags are critical in implementing zero-trust network access (ZTNA) policies. Here are the two key advantages of using zero-trust tags:

\* Access Control (Allow or Deny):

\* Zero-trust tags can be used to define policies that either allow or deny access to specific network resources based on the tag associated with the user or device.

\* This granular control ensures that only authorized users or devices with the appropriate tags can access sensitive resources, thereby enhancing security.

\* Determining Security Posture:

\* Zero-trust tags can be utilized to assess and determine the security posture of an endpoint.

\* Based on the assigned tags, FortiSASE can evaluate the device's compliance with security policies, such as antivirus status, patch levels, and configuration settings.

\* Devices that do not meet the required security posture can be restricted from accessing the network or given limited access.

References:

FortiOS 7.2 Administration Guide: Provides detailed information on configuring and using zero-trust tags for access control and security posture assessment.

FortiSASE 23.2 Documentation: Explains how zero-trust tags are implemented and used within the FortiSASE environment for enhancing security and compliance.

### NEW QUESTION # 46

How does integrating endpoint detection and response (EDR) systems into SASE contribute to security posture?

- A. It enhances user interface designs
- B. It serves as the primary firewall
- C. It provides real-time threat detection and response at endpoints
- D. It isolates the network from the internet

**Answer: C**

### NEW QUESTION # 47

Which setting is crucial when configuring logging to identify security threats effectively in FortiSASE?

Response:

- A. Privacy settings that obscure sensitive information
- B. The color theme of log entries
- C. The font size of log texts
- D. Log rotation frequency based on storage capacity

**Answer: D**

### NEW QUESTION # 48

Customizing FortiSASE dashboards allows security analysts to focus on the most critical data relevant to their role.

Response:

- A. False
- **B. True**

**Answer: B**

### NEW QUESTION # 49

When viewing the daily summary report generated by FortiSASE, the administrator notices that the report contains very little data. What is a possible explanation for this almost empty report?

- A. The web filter security profile is not set to Monitor
- B. There are no security profile group applied to all policies.
- C. Digital experience monitoring is not configured.
- **D. Log allowed traffic is set to Security Events for all policies.**

**Answer: D**

Explanation:

If the daily summary report generated by FortiSASE contains very little data, one possible explanation is that the "Log allowed traffic" setting is configured to log only "Security Events" for all policies. This configuration limits the amount of data logged, as it only includes security events and excludes normal allowed traffic.

\* Log Allowed Traffic Setting:

\* The "Log allowed traffic" setting determines which types of traffic are logged.

\* When set to "Security Events," only traffic that triggers a security event (such as a threat detection or policy violation) is logged.

\* Impact on Report Data:

\* If the log setting excludes regular allowed traffic, the amount of data captured and reported is significantly reduced.

\* This results in reports with minimal data, as only security-related events are included.

FortiOS 7.2 Administration Guide: Provides details on configuring logging settings for traffic policies.

FortiSASE 23.2 Documentation: Explains the impact of logging configurations on report generation and data visibility.
