NEW QUESTION # 16

Question:

Which statement defines the limitation of Native NVMe?

- A. It requires 10 Gigabit or greater Ethernet LANs with TCP.
- B. It requires a 32 Gb/s Fibre Channel to work.
- C. It cannot connect to NVM storage devices outside of the server.
- D. It can only deliver high shared storage performance through Fibre Channel.

Answer: C

Explanation:

Native NVMe is a protocol designed for direct-attached storage (DAS) environments. It allows a host to communicate with NVM

storage devices (like NVMe SSDs) within the same server.

Limitation: Native NVMe does not support external NVMe storage connectivity beyond the server.

To connect to external shared NVMe storage, protocols like NVMe over Fabrics (NVMe-oF) are used.

An IT department needs to execute automated tasks to perform a business operation. They require workflows for arranging, coordinating, and managing these tasks. Which layer of the Modern Data Center Architecture provides this functionality?

- A. Services
- **B. Orchestration**
- C. Virtual infrastructure
- D. Physical infrastructure

Answer: B

Explanation:

The orchestration layer in a modern data center architecture is responsible for automating and coordinating complex tasks and workflows. It enables the integration and management of various services and resources to perform business operations efficiently.

* Physical infrastructure: Comprises the hardware components.

* Virtual infrastructure: Includes virtualized resources like VMs.

* Services: Deliver specific functionalities to end-users.

- **A. Enables efficient and optimized storage and management of information**
- B. Migrates data from a data center to the cloud at no cost
- C. Reduces the amount of data to replicate, migrate, and back up
- D. Reduces the complexity of managing information by creating silos of storage

Answer: A

Explanation:

Intelligent storage systems incorporate advanced features like automated tiering, deduplication, and compression. These features enable efficient storage utilization and optimized management by automating data placement and reducing manual intervention.

* Option A: While intelligent systems may facilitate cloud integration, they do not guarantee cost-free migration.

* Option B: Data reduction features help, but the primary advantage is broader efficiency and optimization.

* Option C: Creating silos increases complexity; intelligent systems aim to unify and simplify storage management.

- B. Connects local iSCSI SANs to remote iSCSI SANs
- C. Connects local FC or iSCSI SANs to remote FC or iSCSI SANs
- **D. Connects local FC SANs to remote FC SANs**

Answer: D

Explanation:

FCIP (Fibre Channel over IP) is used to tunnel Fibre Channel traffic over IP networks. Its primary use case:

* Connecting local FC SANs to remote FC SANs for disaster recovery and remote data replication.

* It encapsulates FC frames into IP packets, transporting them over existing IP infrastructure.

* Option B/C/D: iSCSI is not directly involved in FCIP's primary function.

* GDPR: A specific regulation focusing on data protection and privacy in the EU.

* COBIT: A framework for IT governance and management, but not as comprehensive in risk and compliance aspects.
