C_S4TM_2023퍼펙트 인증덤프 시험대비 덤프자료

IT인증자격증만 소지한다면 일상생활에서 많은 도움이 될것입니다. 하지만 문제는 어떻게 간단하게 시험을 패스 할것인가 입니다. ExamPassdump는 IT전문가들이 제공한 시험관련 최신 연구자료들을 제공해드립니다. ExamPassdump을 선택함으로써 여러분은 성공도 선택한것이라고 볼수 있습니다. ExamPassdump의SAP 인증C_S4TM_2023시험대비 덤프로SAP 인증C_S4TM_2023시험을 패스하세요.

최신 SAP Certified Associate C_S4TM_2023 무료샘플문제 (Q58-Q63):

질문 # 58

You want to use destination-based distance costs when planning freight orders with the VSR optimizer. What MUST you define?

- A. Costs for distance in the transportation lane
- B. A freight unit building rule that does NOT use default routes
- C. Costs for distance in the constraints and cost settings
- D. Planning strategy VSR_DEF in the optimizer settings

정답: A

설명:

To use destination-based distance costs when planning freight orders with the VSR (Vehicle Scheduling and Routing) optimizer in SAP S/4HANA Transportation Management, you must define costs for distance in the transportation lane (A). According to the SAP documentation, the transportation lane contains cost-related data, such as distance-based costs, which the VSR optimizer uses to calculate the optimal plan based on the distance between source and destination locations. This ensures that the optimizer considers the cost implications of the route.

The other options are incorrect:

* Planning strategy VSR_DEF (B) is a default strategy for the VSR optimizer but does not specifically address destination-based distance costs.

* Costs for distance in the constraints and cost settings (C) are not a standard configuration area; costs are defined in transportation lanes or freight agreements.

* A freight unit building rule that does NOT use default routes (D) affects freight unit creation, not the optimizer's cost calculations.

Reference:

SAP S/4HANA Cloud Private Edition, Transportation Management Study Guide: Unit 3 - Transportation Planning, Section on VSR Optimizer.

SAP Help Portal: Transportation Management - VSR Optimizer Configuration ().

질문 # 59

In which object can you track and trace the whole journey of your goods?

- A. Forwarding order
- B. Freight booking
- C. Freight unit
- D. Freight order

정답: C

질문 # 60

A carrier has an agreement with a shipper that starts on January 1 for fuel price as 5% of the base freight. The fuel surcharge is pegged to the current price of 3 USD a gallon. The fuel surcharge can change proportionally based on the fuel price on the calculation date. How will you define fuel surcharge calculation in transportation management? Note: There are 2 correct answers to this question.

- A. Use a rate table for the fuel surcharge with calculation date as a scale.
- B. Use an index table for the fuel surcharge charge item.
- C. Use the rating amount or a standard rate table for the fuel surcharge.
- D. Use a determination rule for the index rate table.

정답: B,D

설명:

In SAP S/4HANA Transportation Management, fuel surcharges that vary based on fuel price changes are managed using dynamic

calculation methods. According to the SAP documentation:

* Use an index table for the fuel surcharge charge item (A): An index table is used to store fuel price indices (e.g., pegged to 3 USD per gallon) and calculate the surcharge as a percentage (5%) of the base freight, adjusted based on the current fuel price.

* Use a determination rule for the index rate table (D): A determination rule is required to select the appropriate index table based on conditions, such as the calculation date or agreement validity, ensuring the correct fuel price is applied.

The other options are incorrect:

* Use the rating amount or a standard rate table for the fuel surcharge (B) is not suitable, as standard rate tables do not dynamically adjust based on fuel price indices.

* Use a rate table for the fuel surcharge with calculation date as a scale (C) is not typically used, as index tables are preferred for dynamic fuel surcharge calculations.

Reference:

SAP S/4HANA Cloud Private Edition, Transportation Management Study Guide: Unit 5 - Charge Calculation and Freight Settlement, Section on Fuel Surcharge Calculations.

SAP Help Portal: Transportation Management - Index Tables for Charge Calculation ().

질문 # 61

You want to set up charge calculation for freight orders. Valid charges should consist of a based on the distance and gross weight of the freight order, and a supplemental charge per container that is included in the freight order. Multiple containers are allowed for each freight order, and the charge is based on the container type can be small, medium or large. What is the minimum number of charge lines with instruction type "standard" that you must set up?

- A. 0
- B. 1
- C. 2
- D. 3

정답: C

질문 # 62

Which of the following can you use to determine a stage sequence in a forwarding order? Note: There are 2 correct answers to this question.

- A. Stage type
- B. Shipping type
- C. Movement type
- D. Stage profile

정답: C,D

질문 # 63
