Associate-Cloud-Engineer Sample Questions Answers, Associate-Cloud-Engineer Reliable Test Pdf

It-Tests is also offering one year free Associate-Cloud-Engineer updates. You can update your Associate-Cloud-Engineer study material for 90 days from the date of purchase. The Google Associate Cloud Engineer Exam updated package will include all the past questions from the past papers. You can pass the Associate-Cloud-Engineer exam easily with the help of the PDF dumps included in the package. It will have all the questions that you should cover for the Google Associate-Cloud-Engineer Exam. If you are facing any issues with the products you have, then you can always contact our 24/7 support to get assistance.

The Associate Cloud Engineer certification exam consists of multiple-choice questions and practical scenarios that test the candidate's ability to perform tasks using GCP services such as Compute Engine, App Engine, and Kubernetes Engine. Associate-Cloud-Engineer exam also evaluates the candidate's ability to use cloud monitoring tools to optimize performance, troubleshoot issues, and ensure high availability of applications. Passing Associate-Cloud-Engineer Exam demonstrates that an individual has acquired the necessary skills and knowledge to work with GCP, which is increasingly becoming a preferred platform for organizations seeking to build and scale cloud-based solutions.

Google Associate Cloud Engineer Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16
You have a website hosted on App Engine standard environment. You want 1% of your users to see a new test version of the website. You want to minimize complexity. What should you do?

- A. Create a new App Engine application in the same project. Deploy the new version in that application. Use the App Engine library to proxy 1% of the requests to the new version.
- B. Deploy the new version in the same application and use the --splits option to give a weight of 99 to the current version and a weight of 1 to the new version.
- C. Create a new App Engine application in the same project. Deploy the new version in that application. Configure your network load balancer to send 1% of the traffic to that new application.
- D. Deploy the new version in the same application and use the --migrate option.

Answer: B

NEW QUESTION # 17
Your organization has user identities in Active Directory. Your organization wants to use Active Directory as their source of truth for identities. Your organization wants to have full control over the Google accounts used by employees for all Google services, including your Google Cloud Platform (GCP) organization.
What should you do?

- A. Ask each employee to create a Google account using self signup. Require that each employee use their company email address and password.
- B. Use the cloud Identity APIs and write a script to synchronize users to Cloud Identity.
- C. Use Google Cloud Directory Sync (GCDS) to synchronize users into Cloud Identity.
- D. Export users from Active Directory as a CSV and import them to Cloud Identity via the Admin Console.

Answer: C

Explanation:
https://cloud.google.com/solutions/federating-gcp-with-active-directory-introduction

NEW QUESTION # 18
You have a development project with appropriate IAM roles defined. You are creating a production project and want to have the same IAM roles on the new project, using the fewest possible steps. What should you do?

- A. In the Google Cloud Platform Console, use the 'create role from role' functionality.
- B. In the Google Cloud Platform Console, use the 'create role' functionality and select all applicable permissions.
- C. Use gcloud iam roles copy and specify your organization as the destination organization.
- D. Use gcloud iam roles copy and specify the production project as the destination project.

Answer: D

Explanation:
Reference:
To create a copy of an existing role spanner.databaseAdmin into a project with PROJECT_ID, run: gcloud iam roles copy --source="roles/spanner.databaseAdmin" --destination=CustomSpannerDbAdmin --dest-project=PROJECT_ID

NEW QUESTION # 19
You are running multiple microservices in a Kubernetes Engine cluster. One microservice is rendering images.
The microservice responsible for the image rendering requires a large amount of CPU time compared to the memory it requires. The other microservices are workloads that are optimized for n1-standard machine types.
You need to optimize your cluster so that all workloads are using resources as efficiently as possible. What should you do?

- A. Configure the required amount of CPU and memory in the resource requests specification of the image rendering microservice deployment Keep the resource requests for the other microservices at the default
- B. Create a node pool with compute-optimized machine type nodes for the image rendering microservice Use the node pool with general-purpose machine type nodes for the other microservices
- C. Assign the pods of the image rendering microservice a higher pod priority than the older microservices
- D. Use the node pool with general-purpose machine type nodes for lite mage rendering microservice Create a nodepool with compute-optimized machine type nodes for the other microservices

Answer: B

NEW QUESTION # 20
You need to configure optimal data storage for files stored in Cloud Storage for minimal cost. The files are used in a mission-critical analytics pipeline that is used continually. The users are in Boston, MA (United States). What should you do?

- A. Configure regional storage for the region closest to the users.
  Configure a Nearline storage class
- B. Configure dual-regional storage for the dual region closest to the users.
  Configure a Nearline storage class
- C. Configure regional storage for the region closest to the users.
  Configure a Standard storage class
- D. Configure dual-regional storage for the dual region closest to the users.
  Configure a Standard storage class

Answer: C
