# Certificate JN0-481 Exam, Test JN0-481 Sample Online

There are many benefits after you pass the JN0-481 certification such as you can enter in the big company and double your wage. Our JN0-481 study materials boost high passing rate and hit rate so that you needn't worry that you can't pass the test too much. We provide free tryout before the purchase to let you decide whether it is valuable or not by yourself. To further understand the merits and features of our JN0-481 Practice Engine you could look at the introduction of our product in detail on our website.

If people buy and use the JN0-481 study tool with bad quality to prepare for their exams, it must do more harm than good for their exams, thus it can be seen that the good and suitable JN0-481 guide question is so important for people' exam that people have to pay more attention to the study materials. In order to help people pass the exam and gain the certification, we are glad to the JN0-481 Study Tool from our company for you. We can promise that our study materials will be very useful and helpful for you to prepare for your exam.

New Launch JN0-481 Questions (PDF) [2026] - Juniper JN0-481 Exam Dumps

In fact, our JN0-481 study materials are not expensive at all. The prices of the JN0-481 exam questions are reasonable and affordable while the quality of them are unmatched high. So with minimum costs you can harvest desirable outcomes more than you can imagine. By using our JN0-481 Training Materials you can gain immensely without incurring a large amount of expenditure. And we give some discounts on special festivals.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q57-Q62):

NEW QUESTION # 57
Within Managed Devices in the Juniper Apstra Ul, you notice that several devices have the OOS- Quarantined status. The devices cannot be added to any blueprint. Which action would solve this problem?

- A. Fix the hardware issues with the quarantined devices.
- B. Acknowledge the device.
- C. Install the agent, even though connectivity is established.
- D. Upload a new pristine configuration.

Answer: B

Explanation:
When an agent installation is successful, devices are placed into the Out of Service Quarantined (OOS-QUARANTINED) state using the Juniper Apstra UI. This state means that the device is not yet managed by Apstra and has not been assigned to any blueprint. The device configuration at this point is called Pristine Config. To make the device ready for use in a blueprint, you need to acknowledge the device, which is a manual action that confirms the device identity and ownership. Acknowledging the device changes its status to Out of Service Ready (OOS- READY).

NEW QUESTION # 58
Which two statements are correct about Time Voyager? {Choose two.)

- A. Time Voyager retains all of the blueprint revisions from the last Juniper Apstra backup.
- B. Time Voyager retains up to twenty-five saved revisions.
- C. Time Voyager retains the last ten blueprint commits.
- D. Time Voyager retains the five most recent blueprint commits.

Answer: B,D

Explanation:
Time Voyager is a feature of Juniper Apstra that allows you to restore previous revisions of a blueprint, which is a logical representation of your network design and configuration. Time Voyager automatically saves the five most recent blueprint commits, which are the changes that you apply to the network. You can also manually save up to twenty-five revisions by keeping them, which prevents them from being overwritten by new commits.

NEW QUESTION # 59
Which three multihoming mechanisms are supported in the Juniper Apstra rack design? (Choose three.)

- A. virtual chassis
- B. vPC
- C. MLAG
- D. ESI
- E. VRRP

Answer: B,C,D

Explanation:
In Juniper Apstra rack designs, the supported multihoming mechanisms are:
- vPC (Virtual Port Channel) for multihoming with certain vendor devices.
- ESI (Ethernet Segment Identifier), part of EVPN multihoming.
- MLAG (Multi-Chassis Link Aggregation Group) for providing multihoming and redundancy.

NEW QUESTION # 60
Which two statements are correct about a Juniper Apstra server? (Choose two.)

- A. The Juniper Apstra server requires one network adapter connection for each managed device.
- B. The Juniper Apstra server uses Layer 2 to communicate with managed devices.
- C. The Juniper Apstra server requires a single network adapter.
- D. The Juniper Apstra server uses Layer 3 to communicate with managed devices.

Answer: C,D

Explanation:
Apstra manages devices using IP connectivity over the management network, which is a Layer 3 relationship. Whether you are using on-box agents or off-box agents, the controller (or cluster) communicates with the fabric devices using IP reachability (for example, to exchange management traffic, retrieve discovery state, collect telemetry, and push configuration). This is why Layer 2 adjacency is not required between the Apstra server and the managed switches; the essential requirement is routable IP connectivity and

appropriate access (credentials/agent connectivity) to the device management interfaces.

From a platform perspective, Apstra does not need a dedicated physical NIC per managed device. Instead, the server/VM requires connectivity to the management network through a single network adapter, and that interface can route to all managed devices. In a typical data center deployment, the Apstra controller VM sits on a management VLAN/subnet and reaches the entire fabric through routed management. This scales operationally: adding devices does not require adding additional server NICs; it only requires IP reachability and capacity planning for telemetry and agent workloads. Thus, the correct statements are that Apstra uses Layer 3 to communicate with managed devices and that it requires a single network adapter for that management connectivity model.

NEW QUESTION # 61

Which two actions are required during Juniper Apstra's deploy phase? (Choose two.)

- A. Assign user roles to the blueprint.
- B. Assign device profiles to the blueprint.
- C. Assign interlace maps to the blueprint.
- D. Assign resources to the blueprint.

Answer: B,D

Explanation:

The deploy phase is the final step in the Juniper Apstra data center fabric design and deployment process. In this phase, you apply the Apstra-rendered configuration to the devices and verify the intent of the blueprint. Based on the web search results, we can infer the following actions are required during the deploy phase:

Assign device profiles to the blueprint. This action associates a specific vendor model to each logical device in the blueprint. Device profiles contain extensive hardware model details, such as form factor, ASIC, CPU, RAM, ECMP limit, and supported features. Device profiles also define how configuration is generated, how telemetry commands are rendered, and how configuration is deployed on a device. Device profiles enable the Apstra system to render and deploy the configuration according to the Apstra Reference Design. Assign resources to the blueprint. This action allocates the physical devices, IP addresses, VLANs, and ASNs to the logical devices, networks, and routing zones in the blueprint. Resources can be assigned manually or automatically by the Apstra system. Assigning resources ensures that the blueprint has all the necessary elements to generate the configuration and deploy the fabric5 . Assign user roles to the blueprint. This action is not required during the deploy phase. User roles are defined at the system level, not at the blueprint level. User roles determine the permissions and access levels of different users in the Apstra system. User roles can be system-defined or custom-defined .

Assign interface maps to the blueprint. This action is not required during the deploy phase.

Interface maps are defined at the design phase, not at the deploy phase. Interface maps are objects that map the logical interfaces of a logical device to the physical interfaces of a device profile. Interface maps enable the Apstra system to generate the correct interface configuration for each device in the fabric.

NEW QUESTION # 62

......

If you are also facing the same problem then you are at the trusted spot. Exams4Collection offers updated and real Juniper JN0-481 Exam Dumps for Data Center, Specialist (JNCIS-DC) (JN0-481) test takers who want to prepare quickly for the Data Center, Specialist (JNCIS-DC) (JN0-481) examination. These actual JN0-481 exam questions have been compiled by a team of professionals after a thorough analysis of past papers and current content of the JN0-481 test. If students prepare with these valid Data Center, Specialist (JNCIS-DC) (JN0-481) questions, they will surely become capable of clearing the Data Center, Specialist (JNCIS-DC) (JN0-481) examination within a few days.
