

Pass Guaranteed Quiz 2026 First-grade Cisco 300-620: Implementing Cisco Application Centric Infrastructure Reliable Dumps

Exam 300-620 Implementing Cisco Application Centric Infrastructure

Answers: A

Explanation:
Section: ACI Management

NEW QUESTION # 25
Which feature dynamically assigns or modifies the EPG association of virtual machines based on their attributes?

- A. vSeg EPGs
- B. application EPGs
- C. standard contracts
- D. sticky contracts

Answers: D

NEW QUESTION # 26
Refer to the exhibit.

Refer to the exhibit. An engineer configured subnets on the external EPG called L3OUT_CONE. The internal endpoints in the 10.0.0.0/24 subnet can reach internal endpoints, but the external endpoints in the 172.16.0.0/24 subnet are unreachable. Which set of actions resolves the connectivity?

- A. Disable both external EPG subnets.
Change the 10.0.0.0/24 subnet.
- B. Disable both external EPG subnets.
Change the 172.16.0.0/24 subnet.
- C. Disable the external EPG subnet 0.0.0.0/0.
Change the 10.0.0.0/24 subnet.
- D. Disable the external EPG subnet 0.0.0.0/0.
Change the 172.16.0.0/24 subnet.

Answers: D

With the 300-620 certification you can gain a range of career benefits which include credibility, marketability, validation of skills, and access to new job opportunities. And then you need to enroll in the 300-620 exam and prepare well to crack this 300-620 Exam with good scores. The PDFDumps will provide you with real, updated, and error-free Cisco 300-620 Exam Dumps that will enable you to pass the final 300-620 exam easily.

Exam Outline

The Cisco 300-620 Exam equips the professionals with the skills required to install, configure, and maintain data center technology. The content of this test revolves around six domains that are listed below:

- Integrations (15%)
- ACI Fabric Infrastructure (20%)
- External Network Connectedness (20%)
- ACI Anywhere (10%)

Ace Your Exam Preparation with PDFDumps 300-620 Practice Test

There are other several Cisco 300-620 certification exam benefits that you can gain after passing the Cisco 300-620 certification exam. However, you should keep in mind that passing the Implementing Cisco Application Centric Infrastructure certification exam is not a simple and easiest task. It is a challenging job that you can make simple and successful with the complete 300-620 Exam Preparation.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q385-Q390):

NEW QUESTION # 385

Refer to the exhibit. An engineer wants to initiate an ICMP ping from Server1 to Server2. The requirement is for the BD1 to enforce ICMP replies that follow the expected path. The packets must be prevented from taking the direct path from Leaf1 to Server1. Which action must be taken on BD1 to meet these requirements?

- A. Set L2 Unknown Unicast to Hardware Proxy.
- B. Enable ARP Flooding.
- C. Disable Unicast Routing.
- D. Set L2 Unknown Unicast to Flood.

Answer: C

Explanation:

In this topology the gateway for Server1 is outside of the ACI fabric.

NEW QUESTION # 386

Which two statements regarding ACI Multi-Site are true? (Choose two.)

- A. The Multi-Site orchestrator must be directly attached to one ACI leaf.
- B. Routers in the Inter-Site network must run OSPF, DHCP relay, and MP-BGP.
- C. ACI Multi-Site is a solution that allows one APIC cluster to manage multiple ACI sites.
- D. ACI Multi-Site is a solution that supports a dedicated APIC cluster per site.
- E. The Inter-Site network routers should run OSPF to establish peering with the spines.

Answer: D,E

Explanation:

Cisco ACI Multi-Site architecture

The architecture allows you to interconnect separate Cisco ACI APIC cluster domains (fabrics), each representing a different region, all part of the same Cisco ACI Multi-Site Orchestrator domain. Doing so helps ensure multitenant Layer 2 and Layer 3 network connectivity across sites, and it also extends the policy domain end-to-end across the entire system. This design is achieved by using the following functional components:

<https://www.cisco.com/c/en/us/solutions/collateral/data-center-virtualization/application-centric-infrastructure/white-paper-c11-739609.html#CiscoACIMultiSiteOrchestrator> Hence, Multi-Site Orchestrator cluster nodes can be deployed securely over whatever network infrastructure is available to interconnect them.

The Cisco ACI Multi-Site Orchestrator design is based on a microservices architecture in which three MSO nodes are clustered together in an active/active fashion. The Cisco ACI Multi-Site Orchestrator nodes must communicate with the Out-Of-Band (OOB) interface of the APIC nodes deployed in different sites. MSO also provides northbound access through Representational State Transfer (REST) APIs or the GUI (HTTPS), which allows you to manage the full lifecycle of networking and tenant policies that need to be deployed across sites (Figure 17).

You can choose to deploy the Multi-Site Orchestrator cluster in one of the following two ways:

- Deploy a VM-based MSO cluster directly in VMware ESXi virtual machines (Figure 18): This is the deployment model supported from the very first release of Cisco Multi-Site Orchestrator and still available at the time of writing of this paper.
- Deploy a Cisco Application Services Engine (CASE)-based MSO cluster. This flavor, available from Cisco ACI Multi-Site Orchestrator Release 2.2(3), consists of an application (.aci format) installed on a Cisco Application Services Engine (CASE).

NEW QUESTION # 387

An engineer configures a Multi-Pod system with the default gateway residing outside of the ACI fabric for a bridge domain. Which setting should be configured to support this requirement?

- A. disable Advertise Host Routes
- **B. disable Unicast Routing**
- C. disable IP Data-plane Learning
- D. disable Limit IP Learning to Subnet

Answer: B

Explanation:

Unicast routing should be disabled to configure the default gateway outside the ACI fabric.

https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/migration_guides/migrating_existing_networks_to_aci.html#_Toc27467766

NEW QUESTION # 388

An engineer configures a Multi-Pod system with the default gateway residing outside of the ACI fabric for a bridge domain. Which setting should be configured to support this requirement?

- A. disable Advertise Host Routes
- B. disable Unicast Routing
- C. disable IP Data-plane Learning
- **D. disable Limit IP Learning to Subnet**

Answer: D

Explanation:

Section: ACI Anywhere

NEW QUESTION # 389

An engineer is implementing a Cisco ACI data center network that includes Cisco Nexus 2000 Series 10G fabric extenders. Which physical topology is supported?

- A.
- **B.**
- C.
- D.

Answer: B

NEW QUESTION # 390

.....

We provide free update and online customer service which works on the line whole day. Our 300-620 study materials provide varied versions of our 300-620 study material for you to choose and the learning costs you little time and energy. You can use our 300-620 exam prep immediately after you purchase them, we will send our 300-620 Exam Questions within 5-10 minutes to you. We treat your time as our own time, as precious as you see, so we never waste a minute or two in some useless process. Please rest assured that use, we believe that you will definitely pass the 300-620 exam
