Exam Plat-Dev-210 Assessment, Cert Plat-Dev-210 Exam

BraindumpStudy wants to win the trust of Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam candidates at any cost. To achieve this objective BraindumpStudy is offering real, updated, and error-free Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam dumps in three different formats. These Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam questions formats are BraindumpStudy Salesforce Plat-Dev-210 dumps PDF files, desktop practice test software, and web-based practice test software.

Salesforce Certified Omnistudio Developer Sample Questions (Q61-Q66):

NEW QUESTION # 61

A developer is configuring the API URL in an HTTP Action element within an Integration procedure.
What is the merge code syntax for passing a Date node from an element named SetValues in the URL?

- A. %SetValues Date
- B. (' Setvalues' ['Date']
- C. {{(SetValues. Date)}}
- D. x%SetValues.Date%

Answer: C

Explanation:

The correct syntax for merge codes in Integration Procedure is {{(NodeName)}}, where NodeName is the name of the JSON node in the data source. The other options are either missing the parentheses or using incorrect symbols.

NEW QUESTION # 62

Which two in an integration Procedure or DataRaptor can execute a function like CONCAT or DATEDIFF?
Choose 2 answers

- A. In a DataRaptor in an Output Tab Output JSON Path.
- B. In a Set Values Action in a Value field.
- C. In a DataRaptor Action in an Input Parameters value field.
- D. In a Remote Action in an Additional Output value field.

Answer: B,D

Explanation:

A Set Values Action in a Value field and a Remote Action in an Additional Output value field can execute a function like CONCAT or DATEDIFF by using the syntax `{{function(parameters}}}`. For example, `{{CONCAT('Hello', 'World')}}}` or `{{DATEDIFF('2021-01-01', '2021-01-31')}}}`.

NEW QUESTION # 63

A developer creates a DataRaptor Extract to retrieve data to pass to an external service. The external service expects the field value to be an integer. However, the DataRaptor is sending it as a string.
Which action can the developer take to fix this?

- A. In the DataRaptor Output tab, enter the default value as 0 on the field.
- B. In the DataRaptor Output tab, select the Output Data Type of that field to Integer.
- C. In the DataRaptor Extract tab, set the Input Data Type field to Integer.
- D. In the DataRaptor Formula tab, define a formula using the function TOINTEGER and use the formula as output.

Answer: D

Explanation:

The DataRaptor Formula tab allows the developer to define formulas using functions and operators to manipulate data. The TOINTEGER function converts a string value to an integer value. The developer can use this function to output the field value as an integer and use the formula as output

NEW QUESTION # 64

A developer needs to change some field labels on a FlexCard. The FlexCard is currently deployed to production. The developer that the best course of action is to version the FlexCard rather than cloning it.
Which factor would lead the developer to this decision?

- A. All instances of the FlexCard must be updated with the changes.
- B. The new and current versions will be displayed together on the same target.
- C. The new version of the FlexCard will be used in a new Console, and the current version of the FlexCard should remain unchanged.
- D. Another team member is developing new actions, fields, and styling for the current version of the FlexCard.

Answer: A

Explanation:

Versioning a FlexCard allows the developer to make changes to the FlexCard without affecting the existing instances of the FlexCard. The developer can choose to update all instances of the FlexCard with the new version or keep them as they are. This is useful when the changes are minor and do not affect the functionality or layout of the FlexCard. Cloning a FlexCard creates a copy of the FlexCard with a new name and ID. The developer can make changes to the cloned FlexCard without affecting the original FlexCard. This is useful when the changes are major and require a different configuration or design of the FlexCard. In this case, since all instances of the FlexCard must be updated with the changes, versioning is the best course of action.

NEW QUESTION # 65

A developer needs to create DataRaptor to retrieve the name of an account for a contact.

Following best practices, how should a developer configure the extraction steps?

- A. Define an extraction step for the Account object, and set the Extract JSON Path to Account.Contact.Name
- B. Define extraction steps for the Contact and the Account objects, and set the Extract JSON Path to Account.Name
- **C. Define an extraction step for the Contact object and set the Extract JSON Path to Contact.Account.Name**
- D. Define extraction steps for the Contact and the Account objects, and set the Extract JSON Path to Contact.Account.Name

Answer: C

Explanation:

A DataRaptor Extract can retrieve data from multiple objects using extraction steps and JSON paths.

However, if the data is from a single object, only one extraction step is needed. The Extract JSON Path can use dot notation to access related fields from that object, such as Contact.Account.Name.

NEW QUESTION # 66

.....

There are three versions of our Plat-Dev-210 learning engine which can allow all kinds of our customers to use conveniently in different situations. They are the PDF, Software and APP online versions. I specially recommend the APP online version of our Plat-Dev-210 Exam Dumps. With the online app version of our Plat-Dev-210 actual exam, you can just feel free to practice the questions in our Plat-Dev-210 training materials on all kinds of electronic devices, such as IPAD, telephone, computer and so on!
