C_BCBTP_2502 Valid Exam Tutorial & C_BCBTP_2502 Reliable Test Answers

Complete Guide to Preparing for the SAP C_BCBTP_2502 Exam

SAP C_BCBTP_2502 Exam Guide

Our services before, during and after the clients use our C_BCBTP_2502 certification material are considerate. Before the purchase, the clients can download and try out our C_BCBTP_2502 learning file freely. During the clients use our products they can contact our online customer service staff to consult the problems about our products. Our company gives priority to the satisfaction degree of the clients on our C_BCBTP_2502 Exam Questions and puts the quality of the service in the first place. We also have free demo of our C_BCBTP_2502 learning guide for you to check the quality before your payment.

SAP C_BCBTP_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	• Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.
Topic 2	• Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

C_BCBTP_2502 Reliable Test Answers, C_BCBTP_2502 Reliable Study Notes

If you come to our website to choose C_BCBTP_2502 study materials, you will enjoy humanized service. Firstly, we have chat windows to wipe out your doubts about our C_BCBTP_2502 study materials. You can ask any question about our study materials. All of our online workers are going through special training. They are familiar with all details of our C_BCBTP_2502 Study Materials. Also, you have easy access to our free demo. Once you apply for our free trials of the study materials, our system will quickly send it via email.

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite Sample Questions (Q10-Q15):

NEW QUESTION # 10
Which SAP BTP services support AI-driven automation? (Choose two).

- A. SAP AI Core
- B. SAP Business Network
- C. SAP Business Process Intelligence
- D. SAP Concur

Answer: A,C

Explanation:
AI-driven automation on SAP BTP is achieved through a combination of foundational infrastructure and process analysis tools. SAP AI Core is a key service that provides a dedicated runtime for AI workloads. It allows developers to manage the entire lifecycle of machine learning models-from training to deployment- at scale. It is designed to handle large datasets and complex computations while ensuring that AI models are transparent and compliant with enterprise standards. By using SAP AI Core, businesses can embed predictive capabilities directly into their business logic.
Complementing this is SAP Business Process Intelligence (part of the SAP Signavio suite). This service uses AI to "mine" data from existing business processes to identify inefficiencies, bottlenecks, and manual tasks that are prime candidates for automation. It provides the "sight" to see where automation is needed, while SAP AI Core provides the "brain" to execute intelligent decisions. Together, these services allow an organization to move beyond simple task automation toward intelligent process transformation. SAP Concur and SAP Business Network, while benefiting from these technologies, are SaaS applications rather than the underlying services that facilitate the creation and management of AI-driven automation workflows within the BTP ecosystem.

NEW QUESTION # 11
Which SAP BTP component supports microservices-based application development?

- A. SAP Business Network
- B. SAP Kyma Runtime
- C. SAP SuccessFactors
- D. SAP Concur

Answer: B

Explanation:
As enterprises move toward modern, scalable application architectures, the move from monolithic codebases to microservices becomes essential. SAP Kyma Runtime is the specific component of SAP BTP designed to support this transition. It is a fully managed Kubernetes-based environment that allows developers to extend SAP applications using serverless functions and microservices. Kyma provides a cloud-native way to build and run containerized applications, offering high scalability and flexibility. Positioning Kyma within the SAP Business Suite ecosystem is critical for "side-by-side" extensibility. It allows developers to build specialized services-such as a custom loyalty engine or a unique logistics tracker-using their preferred programming languages and frameworks (like Node.js, Go, or Python) while maintaining a seamless connection to the SAP core. Kyma is particularly powerful for "event-driven" architectures; it can listen for events in SAP S/4HANA (like a "New Sales Order created" event) and instantly

trigger a microservice to perform a specific action in a third-party system. This decouples the innovation layer from the stable core, allowing for rapid updates and deployments without risking the stability of the primary business processes.

NEW QUESTION # 12

Which SAP BTP service allows businesses to create low-code/no-code applications?

- A. SAP Business Network
- B. SAP BusinessObjects
- C. SAP Concur
- D. SAP Build Apps

Answer: D

Explanation:
To accelerate digital transformation, SAP has introduced the SAP Build portfolio on BTP, which is specifically designed to democratize application development. SAP Build Apps (formerly AppGyver) is the primary service within this portfolio that enables the creation of enterprise-grade applications using a no-code visual environment. This service allows users to build sophisticated user interfaces for mobile and web applications by simply dragging and dropping components. It also includes a visual logic editor, which eliminates the need to write traditional code for defining how the application behaves.
The strategic importance of SAP Build Apps within the SAP Business Technology Platform is its ability to reduce the backlog of IT departments. By allowing business experts-who understand the process but may not know how to code-to build their own solutions, SAP ensures that innovation can happen at the "front lines" of the business. These apps can easily be connected to SAP S/4HANA or other backend systems through secure APIs, ensuring that data integrity is maintained. This contrasts with tools like SAP BusinessObjects, which is focused on business intelligence and reporting, or SAP Concur, which is a specific SaaS application for travel and expense management. SAP Build Apps is a foundational service for positioning BTP as an agile platform for rapid extension and innovation.

NEW QUESTION # 13

How does SAP BTP support hybrid cloud strategies?

- A. By restricting enterprises to a single cloud vendor.
- B. By enforcing cloud-only solutions without on-premise support.
- C. By allowing seamless integration between on-premise and cloud systems.
- D. By eliminating the need for cloud-based analytics.

Answer: C

Explanation:
Most large enterprises do not operate solely in the cloud; they maintain a "hybrid" environment consisting of legacy on-premise systems (like SAP ERP 6.0) and modern cloud applications (like SAP S/4HANA Cloud).
SAP BTP supports hybrid cloud strategies by acting as the bridge between these two worlds. Through the SAP Connectivity Service and the Cloud Connector, BTP establishes a secure, encrypted tunnel that allows cloud-based services to access on-premise data and processes without requiring complex VPN setups or opening vulnerable firewall ports.
This capability is essential for businesses that are mid-transition in their digital transformation journey. It allows them to keep their core "system of record" on-premise for compliance or technical reasons while still taking advantage of cloud-native innovations on BTP, such as advanced analytics, AI, and mobile extensions.
By positioning BTP as a hybrid-ready platform, SAP ensures that customers can modernize at their own pace.
This "side-by-side" extensibility model ensures that the on-premise core remains clean and stable, while the cloud layer provides the agility needed to respond to market changes. This flexibility is a cornerstone of the SAP Business Suite's value proposition, offering a path to the cloud that respects the existing investments of the enterprise.

NEW QUESTION # 14

How does SAP BTP enable businesses to extend their existing SAP applications?

- A. By requiring all applications to be developed from scratch.
- B. By limiting customization to SAP standard functionalities.
- C. By restricting integration with external systems.

- D. By providing low-code/no-code development tools.

Answer: D

Explanation:
A fundamental principle of modernizing the SAP ecosystem is the concept of a "Clean Core." SAP BTP enables this by allowing organizations to build extensions "side-by-side" rather than within the core ERP code (classic "in-app" customization). By providing low-code/no-code development tools, such as SAP Build, the platform empowers both professional developers and "citizen developers" (business users with limited coding knowledge) to create applications that add specific business value without compromising the stability or upgradeability of the core SAP S/4HANA system.
These tools allow for the rapid creation of user interfaces using SAP Fiori elements and the automation of manual tasks through visual drag-and-drop interfaces. This approach is a stark contrast to traditional development, which often required extensive, custom ABAP coding that made system upgrades difficult and expensive. By positioning BTP as the extension layer, SAP ensures that businesses can remain agile and respond quickly to market changes. This flexibility is supported by a robust set of services that facilitate secure communication between the extension and the core system via APIs. Consequently, businesses can innovate at the edge while maintaining a stable, standardized digital core, which is the hallmark of the SAP Business Suite's evolution into the cloud era.

NEW QUESTION # 15
......

No doubt the SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite (C_BCBTP_2502) certification is one of the most challenging certification exams in the market. This C_BCBTP_2502 certification exam gives always a tough time to SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite (C_BCBTP_2502) exam candidates. The Fast2test understands this hurdle and offers recommended and real C_BCBTP_2502 Exam Practice questions in three different formats. These formats hold high demand in the market and offer a great solution for quick and complete SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite (C_BCBTP_2502) exam preparation.
