

# 100% Pass Salesforce - High Pass-Rate Analytics-Arch-201 - Salesforce Certified Tableau Architect Reliable Test Blueprint

**Special 60% Discount Offer**

**ExamsTrack**  
ONE-STOP SHOP FOR IT CERT

**Pass Your Next Certification Exam Fast!**  
*Everything you need to prepare, learn & pass your certification exam easily.*

- ✓ Latest Exam Questions & Answers from certification exams.
- ✓ High Success Rate supported by our 99.5% pass history.
- ✓ Hassle Free Refund if you failed your exam.
- ✓ Instant Downloads as soon as you complete your purchase.
- ✓ Free Quick Updates available within 2 weeks of any change to the actual exam.

Free demos of ActualVCE Analytics-Arch-201 exam questions are available which you can download easily. Just choose the right ActualVCE Analytics-Arch-201 exam questions format and download the Analytics-Arch-201 exam product demo free of cost. Check the top features of Analytics-Arch-201 Exam Questions and if you feel that the ActualVCE Salesforce Certified Tableau Architect (Analytics-Arch-201) certification exam practice material can work with you then take your buying decision and download it accordingly. Best of luck!!!

## Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Monitor and Maintain a Tableau Deployment:</b> This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Design a Tableau Infrastructure:</b> This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• <b>Deploy Tableau Server:</b> This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.</li></ul>

## Exam Analytics-Arch-201 Vce Format, Analytics-Arch-201 Reliable Test Online

If you have any question about our Analytics-Arch-201 test torrent, do not hesitate and remember to contact us. we are glad to help you solve your problem. If you buy our Salesforce Certified Tableau Architect guide torrent and take it seriously consideration, you will find you can take your exam after twenty to thirty hours' practice. So come to buy our Analytics-Arch-201 Test Torrent, it will help you pass your exam and get the certification in a short time that you long to own.

### Salesforce Certified Tableau Architect Sample Questions (Q154-Q159):

#### NEW QUESTION # 154

During the troubleshooting of SAML authentication issues in Tableau Server, what is a common area to investigate?

- **A. The time synchronization between Tableau Server and the SAML identity provider**
- B. The version compatibility of the web browser used to access Tableau Server
- C. The network bandwidth and latency between the Tableau Server and the SAML provider
- D. The storage capacity of the Tableau Server to handle SAML requests

**Answer: A**

Explanation:

The time synchronization between Tableau Server and the SAML identity provider Ensuring time synchronization between Tableau Server and the SAML identity provider is a common and crucial aspect to check when troubleshooting SAML authentication issues. SAML assertions often have time constraints, and discrepancies in system times can lead to failed authentications. Option A is incorrect because network bandwidth and latency, while important for overall performance, are less likely to be the cause of SAML-specific issues. Option C is incorrect as storage capacity of the Tableau Server is generally not related to handling SAML authentication re-quests. Option D is incorrect because version compatibility of the web browser, while important for user experience, is not a common cause of SAML authentication problems.

#### NEW QUESTION # 155

In configuring Connected App authentication for Tableau Server, what is a key step to ensure se-cure and proper functionality of the integration?

- A. Allocating additional storage on Tableau Server for data accessed by the connected app
- B. Setting up a dedicated VPN channel between Tableau Server and the connected app
- **C. Registering the connected app in Tableau Server and obtaining client credentials (client ID and secret)**
- D. Creating a unique user account in Tableau Server for each user of the connected app

**Answer: C**

Explanation:

Registering the connected app in Tableau Server and obtaining client credentials (client ID and secret) Registering the connected app in Tableau Server and obtaining client credentials is essential for secure integration. These credentials are used to authenticate the app with Tableau Server, ensuring that only authorized apps can access data and resources, and maintaining se-cure communication between the app and the server. Option A is incorrect because creating a unique user account for each app user is not necessary for Connected App authentication, which is based on app-level credentials. Option C is incorrect as allocating additional storage on Tableau Server is not directly related to the configuration of Connected App authentication. Option D is incorrect because setting up a VPN is not a standard requirement for configuring Connected App authentication.

#### NEW QUESTION # 156

A company is experiencing high demand for complex data processing tasks in its Tableau environment. To optimize performance, when should the company consider using external services?

- A. Use external services for all data processing tasks, regardless of complexity
- B. Only for basic data visualization tasks to reduce the load on Tableau Server
- C. External services should never be used with Tableau Server
- **D. For complex data blending and analytics tasks that are resource-intensive**

**Answer: D**

Explanation:

For complex data blending and analytics tasks that are resource-intensive Utilizing external services for complex and resource-intensive tasks like data blending and analytics can help in optimizing the performance of the Tableau environment by offloading these demanding processes. Option A is incorrect because basic data visualization tasks are typically well-handled by Tableau Server itself. Option C is incorrect as external services can be beneficial for specific re-source-intensive tasks. Option D is incorrect because using external services for all tasks, regardless of complexity, can be inefficient and unnecessary.

#### **NEW QUESTION # 157**

When configuring a test environment for load testing a Tableau Server deployment, what is a key factor to ensure the environment is suitable for effective testing?

- A. Ensuring the test environment has significantly higher specifications than the production environment to test maximum capacity
- B. Using a simplified dataset in the test environment to focus on server performance
- C. Configuring the test environment without security protocols to observe performance with-out any restrictions
- **D. Mirroring the hardware and software configurations of the production environment as closely as possible**

**Answer: D**

Explanation:

Mirroring the hardware and software configurations of the production environment as closely as possible When setting up a test environment for load testing, it is crucial to mirror the production environment's hardware and software configurations as closely as possible. This similarity ensures that the test results are representative of how the Tableau Server would perform in the actual production setting, providing reliable and actionable insights. Option A is incorrect because having significantly higher specifications in the test environment can provide misleading results that do not reflect the actual production performance. Option C is incorrect as using a simplified dataset might not adequately represent the complexity of real-world usage in the production environment. Option D is incorrect because excluding security protocols can affect performance measurements and does not accurately reflect the production environment's constraints.

#### **NEW QUESTION # 158**

When troubleshooting LDAP integration issues in Tableau Server, what common aspect should be checked first?

- A. The network speed and latency between Tableau Server and the LDAP server
- B. The firewall settings on the client machines trying to authenticate with Tableau Server
- **C. The correctness of the LDAP server address and port number configured in Tableau Server**
- D. The compatibility of the LDAP server's software version with Tableau Server

**Answer: C**

Explanation:

The correctness of the LDAP server address and port number configured in Tableau Server A common and primary aspect to check when troubleshooting LDAP integration issues is the correctness of the LDAP server address and port number in the Tableau Server configuration. Incorrect server address or port configuration can lead to failed connections and authentication problems, making it a critical first step in the troubleshooting process. Option A is incorrect because while network speed and latency are important, they are not usually the first aspect to be checked in LDAP integration issues. Option B is incorrect as software version compatibility, although important, is usually validated during the initial setup and is less likely to be the cause of sudden integration issues. Option D is incorrect because firewall settings on client machines are not typically related to LDAP authentication issues on the server side.

#### **NEW QUESTION # 159**

.....

ActualVCE is a reliable study center providing you the valid and correct Analytics-Arch-201 questions & answers for boosting up your success in the actual test. Analytics-Arch-201 PDF file is the common version which many candidates often choose. If you are tired with the screen for study, you can print the Analytics-Arch-201 Pdf Dumps into papers. With the pdf papers, you can write and make notes as you like, which is very convenient for memory. We can ensure you pass with Analytics-Arch-201 study torrent at
