

New CCRN-Pediatric Test Sims - CCRN-Pediatric Certification Torrent

P.S. Free & New CCRN-Pediatric dumps are available on Google Drive shared by It-Tests: https://drive.google.com/open?id=1Era0zs84_6VnZPNsBn-cs1S5tUbJWofZ

In spite of the high-quality of our AACN CCRN-Pediatric study braindumps, our after-sales service can be the most attractive project in our CCRN-Pediatric guide questions. We have free online service which means that if you have any trouble using our AACN CCRN-Pediatric Learning Materials or operate different versions on the platform mistakenly, we can provide help for you remotely in the shortest time.

To be eligible to take the AACN CCRN-Pediatric Certification Exam, nurses must have a current, unrestricted RN license in the United States or its territories. They must also have at least 1,750 hours of direct bedside care in a pediatric critical care setting within the previous two years, or at least 2,000 hours of direct bedside care in a pediatric critical care setting within the previous five years. Nurses who meet these eligibility requirements can apply to take the exam online.

CCRN-Pediatric Certification Torrent & CCRN-Pediatric Study Test

To assimilate those useful knowledge better, many customers eager to have some kinds of practice materials worth practicing. All content is clear and easily understood in our CCRN-Pediatric practice materials. They are accessible with reasonable prices and various versions for your option. All content are in compliance with regulations of the exam. As long as you are determined to succeed, our CCRN-Pediatric Study Guide will be your best reliance

AACN Critical Care Nursing Exam Sample Questions (Q11-Q16):

NEW QUESTION # 11

Which of the following is a major indication for peritoneal dialysis?

- A. Hypervolemia
- B. Hypovolemia

- C. Hypokalemia
- D. Alkalosis

Answer: A

Explanation:

Peritoneal dialysis (PD) is used in pediatric patients with renal failure, especially when associated with fluid overload (hypervolemia), uremia, or electrolyte imbalances not responsive to medical therapy. It is particularly effective for gradual fluid removal in children.

"Indications for peritoneal dialysis in children include fluid overload, hyperkalemia, and acidosis not corrected by conservative measures." (Referenced from CCRN Pediatric - Direct Care: Renal, Indications for Dialysis)

NEW QUESTION # 12

Nurse Sophia is enjoying her lunch at the hospital canteen when a toddler at a nearby table chokes on a piece of food and appears slightly blue. Nurse Sophia should initially:

- A. alert the emergency response
- **B. do about 5 abdominal thrusts**
- C. start mouth to mouth resuscitation
- D. give water to help him swallow

Answer: B

Explanation:

Explanation: At this point, the most effective way to clear the airway of food is to perform abdominal thrusts.

NEW QUESTION # 13

A 3-year-old boy with Hemophilia is going to start infusion of recombinant form of Factor VIII prophylactically three times a week. The nurse should advise the parents to administer the infusion on the days designated:

- A. after lunch
- **B. in the morning**
- C. before dinner
- D. after dinner

Answer: B

Explanation:

Explanation: Due to Hemophilia, Factor VIII should be given in the morning on designated days. The half-life is short. If it was given later in the day, protection would not be adequate when the child is most active and prone to bleeding.

NEW QUESTION # 14

A 5-year-old child is receiving dextrose 5% in water and half-normal saline solution at 100 ml/hour.

Which sign or symptom suggests excessive I.V. fluid intake:

- A. Nausea and vomiting
- **B. Worsening Dyspnea**
- C. Temperature of 102°F
- D. Gastric distension

Answer: B

Explanation:

Explanation: Dyspnea and other signs of respiratory distress signify fluid volume excess (overload), which can occur quickly in a child as fluid shifts rapidly between the intracellular and extracellular compartments. Gastric distension may suggest excessive oral fluid intake or infection. Nausea and vomiting or an elevated temperature may indicate a fluid volume deficit.

NEW QUESTION # 15

While ventilating with 100% FiO₂ via Ambu bag, an intubated child desaturates. Breath sounds are decreased in all fields. What is the best action?

- A. Continue ventilating with Ambu bag
- B. Administer a bronchodilator
- C. Extubate and bag-mask ventilate
- **D. Obtain a chest x-ray and ABG**

Answer: D

NEW QUESTION # 16

.....
