Exam ISTQB-CTAL-TA Bible - ISTQB-CTAL-TA Valid Exam Questions

If you want to be familiar with the real test and grasp the rhythm in the real test, you can choose our ISTQB-CTAL-TA exam test engine to practice. Both our soft test engine and app test engine provide the exam scene simulation functions. You set timed ISTQB-CTAL-TA test and practice again and again. Besides, ISTQB-CTAL-TA exam test engine cover most valid test questions so that it can guide you and help you have a proficient & valid preparation process.

ISTQB (ISTQB CTAL-TA) ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) Sample Questions (Q45-Q50):

NEW QUESTION # 45

Based on the tax system specification as described below, using boundary value analysis, which would be the best test set to

explicitly test on single boundary value fully?

Tax system

A tax system needs to be updated due to new legislation. For a person with a salary of less than € 20 000 and who is married, the tax needs to be recalculated.

If a person has at least three and less than six children, an additional 10% reduction is applicable.

□

- A. Test set (iii)
- B. Test set (i)
- C. **Test set (ii)**
- D. Test set (iv)

Answer: C

Explanation:

The test set B is the best test set to explicitly test on single boundary value fully, using boundary value analysis. Boundary value analysis is a technique that tests the values at or near the boundaries of an input domain. The boundaries for this scenario are:

* Salary less than €20 000

* Number of children at least three and less than six

The test set B tests the boundary values of each boundary (€19 999, €20 000, three children, six children) and one value inside each boundary (€19 998, €20 001, four children). Verified References: [ISTQB Certified Tester Advanced Level Test Analyst CTAL-TA], Section 3.2.2, page 35.

NEW QUESTION # 46

A new online application is being introduced for the start of the next tax year to handle tax liabilities.

This web-based system is especially aimed at those with visual disabilities and several innovative features are being introduced for the user interface. The design of these features is ongoing.

Which of the following represents the BEST approach for accessibility testing?

SELECT ONE OPTION

- A. Wait for the solution to be fully developed, then test during usability testing
- B. Incorporate testing for mobility impaired, deaf, and cognitively disabled users
- C. **Consider accessibility when conducting system design and test from the integration level onwards**
- D. Ensure that there are visually impaired people on the development team

Answer: C

Explanation:

Comprehensive and Detailed in Depth Explanation:

The best practice for accessibility testing is to consider accessibility from the design stage onwards. By incorporating accessibility testing early, potential issues are detected and resolved during integration, rather than waiting for the full system to be completed.

* Option A is impractical as it assumes that having visually impaired people in the development team will automatically ensure accessible design.

* Option B suggests a late-stage testing approach, which is less efficient.

* Option D is not aligned with the primary focus on visual disabilities.

* Option C is correct because addressing accessibility from the integration level onwards helps ensure that accessibility features are built into the system from the start.

NEW QUESTION # 47

As a Test Analyst, you have been given a set of requirements that have been defined for the payment module of a new public transport system. The set includes the following requirements:

P101 The product shall calculate the lowest fare for the destination considering day of week and time, (priority: medium) P102 The product shall compare the traveler's payment with the calculated payment (priority: high) P103 The product shall provide feedback if the payment is not sufficient (priority: high) P104 The product will process payments within 20 seconds at all priority 1 stations during peak hours (priority high) Which set of requirements will typically be tested by a Test Analyst?

- A. P101, P102, P104
- B. P101, P103, P104
- C. **P101, P102, P103**
- D. P102, P103, P104

Answer: C

Explanation:

The set of requirements that will typically be tested by a Test Analyst is P101, P102, and P103. These requirements are related to the functional correctness and appropriateness of the system, which are the main focus areas of a Test Analyst. The Test Analyst will design and execute test cases to verify that the system calculates the lowest fare, compares the traveler's payment, and provides feedback if the payment is not sufficient. The requirement P104 is related to the performance efficiency of the system, which is usually tested by a Technical Test Analyst or a Performance Test Specialist. Verified References: [ISTQB Certified Tester Advanced Level Test Analyst CTAL-TA], Section 2.1.2, page 20.

NEW QUESTION # 48

Based on the system state transition diagram of an ATM system shown below, using the state transition test technique which of the following is an example of a test case required to achieve 1-switch coverage?

- A. 1st try -> 2nd try -> eat card
- B. 1 st try -> 2nd try -> 3rd try
- C. 1 st try -> 2nd try -> 3rd try -> access to act
- D. 1 st try-> 2nd try

Answer: A

Explanation:

The test case C is an example of a test case required to achieve 1-switch coverage, using the state transition test technique. A 1-switch test case is a test case that covers two states and the transition between them. To achieve 100% 1-switch coverage, all transitions between states must be covered by at least one test case. The test case C covers the transition from the state 1st try to the state 2nd try, and the transition from the state 2nd try to the state eat card. Verified References: [ISTQB Certified Tester Advanced Level Test Analyst CTAL- TA], Section 3.4.1, page 39.

NEW QUESTION # 49

When applying the State Transition test technique to the given State Transition diagram, and assuming that screen refreshes can be applied multiple times, how many 1-switch transitions are there starting from the state 'Screen 1'?

SELECT ONE OPTION

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

Comprehensive and Detailed in Depth Explanation:

A 1-switch transition in a state transition diagram is a direct move from one state to another without intermediate states.

From Screen 1, the possible 1-switch transitions are:

- * Next: Moves to Screen 2
- * Back: Moves to Menu
- * Refresh: Stays on Screen 1

Since refresh can be applied multiple times (loop), it is still considered as one transition.

Therefore, the number of 1-switch transitions from Screen 1 is 3.

The correct answer is D (3).

NEW QUESTION # 50

.....

Our company never sets many restrictions to the ISTQB-CTAL-TA exam question. Once you pay for our study materials, our system will automatically send you an email which includes the installation packages. You can conserve the ISTQB-CTAL-TA real exam dumps after you have downloaded on your disk or documents. Whenever it is possible, you can begin your study as long as

there has a computer. All the key and difficult points of the ISTQB-CTAL-TA exam have been summarized by our experts. They have rearranged all contents, which is convenient for your practice. Perhaps you cannot grasp all crucial parts of the ISTQB-CTAL-TA Study Tool by yourself. You also can refer to other candidates' review guidance, which might give you some help. Then we can offer you a variety of learning styles. Our printable ISTQB-CTAL-TA real exam dumps, online engine and windows software are popular among candidates. So you will never feel bored when studying on our ISTQB-CTAL-TA study tool.
