

# Quiz 2026 Nutanix Pass-Sure New NCP-MCI-7.5 Test Vce

The desktop-based practice exam is customizable, tracks your progress, and creates a real Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) exam environment. This software works offline on Windows computers. The web-based practice exam is similar to the desktop-based practice exam and can be taken on any browser without needing to install separate software. Moreover, the web-based Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) practice exam is also compatible with all operating systems.

If you want to pass NCP-MCI-7.5 exams easily and obtain certifications in shortest time, the best way is to purchase the best high-quality NCP-MCI-7.5 exam preparation materials. That's what we do. Our NCP-MCI-7.5 training materials are famous for the high pass rate in this field, if you choose our products we are sure that you will 100% clear NCP-MCI-7.5 Exams. If you are still headache about how to pass exam certainly, our NCP-MCI-7.5 practice test questions will be your best choice. Don't hesitate again and just choose us!

## Pass Guaranteed Quiz Pass-Sure Nutanix - New NCP-MCI-7.5 Test Vce

In cyber age, it's essential to pass the NCP-MCI-7.5 exam to prove ability especially for lots of office workers. Passing the NCP-MCI-7.5 exam is not only for obtaining a paper certification, but also for a proof of your ability. Most people regard Nutanix certification as a threshold in this industry, therefore, for your convenience, we are fully equipped with a professional team with specialized experts to study and design the most applicable NCP-MCI-7.5 Exam prepare.

## Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Sample Questions (Q15-Q20):

### NEW QUESTION # 15

An administrator needs an account for automation that can be granted granular permissions and being authenticated without an interactive user password.

Which statement best describes how a Prism Central service account authenticates?

- A. Using a CA-signed SSL certificate imported into the Prism Central
- B. Using the cluster admin password and inherits full admin privileges
- C. Using an external KMS key and is limited to encryption operations
- **D. Using a shared secret key managed through IAM and can be assigned RBAC roles**

**Answer: D**

Explanation:

Nutanix documentation for service accounts states that authentication is done using a shared secret key generated and managed through IAM. The same service-account framework is designed so the account can perform actions according to assigned privileges rather than inheriting unrestricted administrator rights. In practical terms, that means a service account is meant for automation, API use, and non-interactive authentication, while still being controlled through the RBAC model. That matches D exactly.

The incorrect options reflect common misunderstandings. A service account does not simply log in with the cluster admin password, and it does not automatically inherit full administrator privileges. It is not an external- KMS construct, and certificate-based auth is not how Nutanix documents this service-account mechanism.

The exam clue is the phrase "without an interactive user password" combined with "granular permissions." Nutanix's answer to that

requirement is a service account authenticated by an IAM-managed shared secret with assignable permissions. Therefore D is the authentic Nutanix answer.

#### NEW QUESTION # 16

A database server has a corrupt database after a VM was restored from a recovery point. The database VM is part of the VIP\_VMS category that is protected by a Protection Policy with asynchronous schedule.

After checking the state of NGT tools, an administrator is investigating the Protection Policy looking for the root cause of the database corruption.

What is the most probably cause?

- A. Take App-Consistent Recovery Point option is not selected.
- B. Set RPO is too high for protecting database VMs.
- C. The VM should have been added to the Applications category.
- D. Roll-up schedule is used in Protection Policy instead of Linear.

**Answer: A**

Explanation:

For database workloads, Nutanix documentation distinguishes between crash-consistent and application-consistent recovery points. If the Take App-Consistent Recovery Points option is not selected, the recovery point may capture storage in a crash-consistent state only. For transactional databases, that can lead to corruption, incomplete writes, or recovery issues after restore. Nutanix specifically documents that selecting the app-consistent option creates application-consistent recovery points; if you do not select it, the recovery points are crash-consistent. That makes D the most likely root cause. ( portal.nutanix.com , portal.nutanix.com ) The mention that NGT was checked is important because NGT participation is commonly part of quiesced and app-consistent protection workflows. A high RPO can increase data loss, but it does not by itself explain logical corruption inside the restored database. Category choice and roll-up schedule are also not the primary issue. Nutanix best practice for databases is to ensure application-consistent protection is enabled wherever supported. Therefore D is the correct answer.

#### NEW QUESTION # 17

An administrator is tasked with configuring a remote site for Data Protection. At the source site, the VMs are in a storage container named Marketing, but they need the data to be replicated to a storage container named Backups at the destination site.

What must be configured in order to accomplish this goal?

- A. vStore PD
- B. vStore mapping
- C. Network mapping
- D. Network Compression

**Answer: B**

Explanation:

In Nutanix PD-based disaster recovery, when the source storage container name and the destination storage container name are different, the administrator must explicitly configure a vStore mapping. Nutanix documentation says that each vStores entry maps a local source storage container to a remote target storage container. Nutanix also documents that if you want replication from a local vStore to a remote vStore with different names, you provide the mapping between the local and target containers. That is exactly what this question is asking: source container Marketing, destination container Backups, and replication must know how those two names correspond. ( Nutanix Portal ) The other choices do not control storage-container placement for replicated data. Network mapping is about network connectivity for failover or recovery testing, not where the storage data lands. Network compression is unrelated to container targeting. vStore PD is not the Nutanix feature name that solves this requirement.

Nutanix's own remote-container best-practice guidance recommends establishing vStore mappings so the target container is deterministic and properly aligned to the protection design. Therefore, the correct and authentic Nutanix answer is C. vStore mapping. ( Nutanix Portal )

#### NEW QUESTION # 18

What should be done once Prism Central is restored?

- A. Configure DNS

- B. Configure the IP
- C. Replace the certificate
- **D. Reset the credentials**

**Answer: D**

Explanation:

Here the uploaded answer key says B, but the current Nutanix documentation for post-restoration considerations says that after restoring Prism Central, administrators should reset the credentials, and it explicitly lists that as a post-restore action. The same Nutanix page also mentions other follow-up tasks such as reconfiguring the proxy server or FQDN if needed, but resetting credentials is directly named as a required post-restoration consideration. Because the question asks what should be done once Prism Central is restored, the most documentation-faithful answer is D. Reset the credentials. ( Nutanix Portal ) The confusion probably comes from related Nutanix guidance that after a restore, some services may continue with self-signed certificates or rotate certificates as part of Microservices Infrastructure behavior. That can make certificate replacement necessary in some environments, but it is not the clearest universal immediate post-restore action documented in the restoration considerations. By contrast, reset the credentials is explicitly listed in the post-restoration guidance. So for an authentic study guide grounded in Nutanix docs rather than only the source key, D is the correct answer. ( Nutanix Portal )

### NEW QUESTION # 19

An administrator has been tasked with migrating VMs out of a storage container that isn't using compression and is using a non-standard naming convention. The administrator needs to do other administrative tasks during the vDisk live migration. What administrative tasks can the administrator perform during the vDisk live migration?

- A. Protection policy based replication of the VM
- B. Update memory and vCPU config of the VM
- **C. Snapshot, clone, backup or resize the VM**
- D. Protection domain based replication of the VM

**Answer: C**

Explanation:

Here the uploaded answer key says C, but current Nutanix documentation says the opposite. Nutanix's Live vDisk Migration Across Storage Containers documentation explicitly states that during an ongoing vDisk migration you cannot perform operations such as clone the VM, resize the VM, or take a snapshot. Nutanix also states, under DR considerations, that you should remove the VM from the protection domain or protection policy, migrate the vDisks, and then add the VM back afterward. That means the actions listed in option C are specifically blocked during vDisk live migration. ( Nutanix Portal ) Because all four answer choices are problematic against the current documentation, this is one of the questions I would flag as flawed in the source bank. The most accurate real-world Nutanix answer is: you should not perform snapshot, clone, resize, or DR policy/protection-domain operations during the migration.

So although the uploaded key marks C, the official docs indicate that C is not actually allowed. For your final study document, this question should ideally be corrected or rewritten because the documented AHV behavior does not cleanly support any listed option as a valid "can perform during migration" task. ( Nutanix Portal )

### NEW QUESTION # 20

.....

Success in the test of the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) certification proves your technical knowledge and skills. The Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) exam credential paves the way toward landing high-paying jobs or promotions in your organization. Many people who attempt the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) exam questions don't find updated practice questions. Due to this they don't prepare as per the current Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) examination content and fail the final test. Failure in the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) exam dumps wastes the money and time of applicants.

**NCP-MCI-7.5 Exam Experience:** <https://www.troytecdumps.com/NCP-MCI-7.5-troytec-exam-dumps.html>

Any legitimate NCP-MCI-7.5 test questions should enforce this style of learning - but you will be hard pressed to find more than a NCP-MCI-7.5 test questions anywhere other than TroytecDumps, The NCP-MCI-7.5 exam questions of TroytecDumps come with up to 365 days of free updates and a free demo, You can put all your queries and get a quick and efficient response as well as

advice of our experts on NCP-MCI-7.5 certification exam you want to take, You can conveniently test your performance by checking your score each time you use our Nutanix NCP-MCI-7.5 practice exam software (desktop and web-based).

Security and Privacy: Due to a series of high profile cyber security breaches Target, Sony, etc, The Hardware You Need, Any legitimate NCP-MCI-7.5 test questions should enforce this style of learning - but you will be hard pressed to find more than a NCP-MCI-7.5 Test Questions anywhere other than TroytecDumps.

## Free PDF Quiz 2026 Nutanix High Pass-Rate NCP-MCI-7.5: New Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Test Vce

The NCP-MCI-7.5 exam questions of TroytecDumps come with up to 365 days of free updates and a free demo, You can put all your queries and get a quick and efficient response as well as advice of our experts on NCP-MCI-7.5 certification exam you want to take.

You can conveniently test your performance by checking your score each time you use our Nutanix NCP-MCI-7.5 practice exam software (desktop and web-based), NCP-MCI-7.5 Online Test Engine is a service you only can enjoy from our TroytecDumps, software version is same as the NCP-MCI-7.5 test engine, and the difference between them is that test engine only supports the Windows operating system and soft version allowed any electronic equipments.
