## NEX Dumps Free Download | NEX Latest Dumps Pdf

Passing an exam isn't an easy thing for some candidates, if you choose the NEX training materials of us, we will make the exam easier for you. NEX training materials include knowledge points, you can remember them through practicing. NEX questions and answers will list the right answer for you, what you need to do is to practice them. In addition, there are experienced specialists checking the NEX Exam Dumps, they will ensure the timely update for the latest version.

### NLN Nursing Entrance Exam (Math, Science and Verbal) Sample Questions (Q21-Q26):

#### NEW QUESTION # 21

Veins throughout the body contain structures, indicated by arrows, in the image below.

The structures shown in the image prevent which of the following from occurring?

- A. Obstruction of blood flow
- B. Forward flow of blood
- C. Blood leaking into the interstitial spaces
- **D. Backflow of blood**

**Answer: D**

Explanation:

This question focuses on cardiovascular anatomy and physiology. Veins contain one-way valves that are especially important in the limbs, where blood must travel against gravity to return to the heart. These valves open to allow blood to move toward the heart and close to prevent blood from flowing backward. The structures indicated by the arrows in the image represent venous valves. Without these valves, blood could pool in the veins, leading to conditions such as varicose veins. Forward flow of blood is promoted, not prevented, by these valves. They do not obstruct blood flow under normal conditions, nor do they prevent blood from leaking into tissues—that function is related to capillary structure. The NEX Science exam frequently tests the functional significance of anatomical structures, and recognizing that venous valves prevent backflow of blood is a key cardiovascular concept.

#### NEW QUESTION # 22

Given that military time uses a 24-hour clock, what time is of a day past 9:15 a.m. in military time?

- A. 21:15 hours
- B. 05:15 hours
- C. 12:15 hours
- **D. 17:15 hours**

**Answer: D**

Explanation:

This question combines fractions of time and military time. One full day is 24 hours. One-third of a day equals  $24 \div 3 = 8$  hours. Add 8 hours to 9:15 a.m. Doing so results in 5:15 p.m. In military time, p.m. hours are converted by adding 12 to the hour: 5:15 p.m. becomes 17:15. Therefore, option A is correct. Option C would represent noon, and option D is early morning. The NEX often tests time interpretation, so remembering that military time does not use "a.m." or "p.m." is critical.

#### NEW QUESTION # 23

Reading Comprehension

Passage:

Physical activity has been shown to reduce stress levels by promoting the release of endorphins. These chemicals help improve mood and overall well-being.

What is the effect of endorphin release?

- A. Reduced immunity
- B. Increased stress
- **C. Improved mood**
- D. Decreased circulation

**Answer: C**

Explanation:

The passage explains that endorphins released during physical activity improve mood and well-being. Option C directly states this effect. The other options contradict the information provided. The NEX exam often tests understanding of cause-and-effect relationships in health-related passages.

---

#### NEW QUESTION # 24

Word Knowledge

The word "temporary" most nearly means:

- A. Brief
- B. Severe
- C. Frequent
- D. Permanent

**Answer: A**

Explanation:

Temporary refers to something lasting for a short period of time. Option B correctly reflects this meaning. Recognizing time-related descriptors is common on the NEX exam.

---

#### NEW QUESTION # 25

The mean and standard deviation (SD) of the heights (in centimeters) of four groups of teenage boys are shown below:

Based on this information, which group has the least variability in height?

- A. Group 1
- B. Group 3
- C. Group 2
- D. Group 4

**Answer: B**

Explanation:

This question tests understanding of standard deviation as a measure of variability. The group with the smallest standard deviation has the least variability. Comparing the values, Group 3 has the smallest SD at 6.9.

Therefore, option B is correct. The mean does not affect variability; only the SD matters in this comparison.

The NEX often includes questions where students must interpret statistical summaries rather than perform calculations. Remember that lower SD values indicate data points are more closely clustered around the mean.

#### NEW QUESTION # 26

.....

Compared with those uninformed exam candidates who do not have effective preparing guide like our NEX study braindumps, you have already won than them. Among wide array of choices, our products are absolutely perfect. Besides, from economic perspective, our NEX Real Questions are priced reasonably so we made a balance between delivering satisfaction to customers and doing our own jobs. So in this critical moment, our NEX prep guide will make you satisfied.
