## New JN0-452 Dumps Book - JN0-452 Reliable Dump

The goal of a Juniper JN0-452 mock exam is to test exam readiness. PrepAwayExam's online Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) JN0-452 practice test can be accessed online through all major browsers such as Chrome, Firefox, Safari, and Edge. You can also download and install the offline version of Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) JN0-452

Practice Exam software on Windows-based PCs only. You can prepare for the Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) exam without an internet connection using the offline version of the mock exam.

## Juniper Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) Sample Questions (Q38-Q43):

### NEW QUESTION # 38

Referring to the exhibit, you asked Marvis to troubleshoot a client. In this scenario, what did Marvis determine?

□

- A. two DHCP failures today
- B. DHCP errors over the past seven days
- C. two authentication failures today
- **D. two authentication failures over this week**

**Answer: D**

Explanation:

Reference: <https://www.mist.com/documentation/mist-experience-marvis-client/>

### NEW QUESTION # 39

Referring to the exhibit, what are two reasons why a Mist AP would have multiple IP addresses? (Choose two.)

□

- A. One IP address is used for redundancy.
- **B. The Local Status Page is enabled in the site settings.**
- C. One IP address is used for control traffic and one address is used for management traffic.
- **D. A guest portal is configured on a tagged VLAN.**

**Answer: B,D**

Explanation:

Reference: <https://www.mist.com/documentation/aps-use-ip-addresses/>

According to the Mist AP43 Access Point Data Sheet document1 and the Guest Access - Mist document2, two reasons why a Mist AP would have multiple IP addresses are:

The Local Status Page is enabled in the site settings, which allows the AP to have an additional IP address on VLAN 4094 for local management purposes.

A guest portal is configured on a tagged VLAN, which allows the AP to have an additional IP address on that VLAN for guest access purposes.

### NEW QUESTION # 40

You have four actions presented to you by Marvis. Three of these actions are found under the AP category.

Upon inspecting the category, you notice that the sub-categories in the AP category contain a lock symbol so that you cannot select any of the sub-categories to view the root cause. In this scenario, which statement is correct?

- A. You need to enable Marvis Minis.
- **B. A subscription is needed.**
- C. The issue was identified as an AP issue, but Marvis Actions could not find the actual root cause.
- D. It takes more time for the root cause report to be prepared by Marvis Actions.

**Answer: B**

Explanation:

In the Juniper Mist dashboard, the Marvis Actions page serves as a centralized "proactive inbox" that identifies critical issues across the organization. However, the depth of information and the ability to interact with these findings are strictly tied to the Marvis Virtual Network Assistant (VNA) subscription.

The Mist dashboard provides a basic level of visibility even without a full Marvis license, allowing administrators to see that certain high-level categories (such as AP, Switch, or Gateway) have identified issues. This is designed to demonstrate the value of the AI

engine. However, when you see a lock symbol next to sub-categories or specific Marvis Actions, it indicates that the organizational account does not have an active Marvis VNA subscription for those specific devices.

Without the subscription, the system will not permit the user to "drill down" into the root cause analysis, view historical event timelines, or access the specific remediation steps suggested by the AI. For example, while a standard Wi-Fi Assurance license might show that an AP is offline, the Marvis VNA subscription is what enables the detailed investigation-such as determining if the offline status is due to a cable failure, a bad PoE port on a switch, or a firmware mismatch.

To unlock these features and remove the lock symbols, a SUB-VNA (Virtual Network Assistant) subscription must be applied to the access points in the site. Once licensed, Marvis can provide full "conversational AI" capabilities, allowing you to ask natural language questions about the APs and giving you the interactive tools needed to resolve the issues identified in the Actions dashboard. Therefore, the presence of the lock icon is a direct indicator of a missing or expired subscription tier required for advanced AI-driven troubleshooting.

#### NEW QUESTION # 41

A university is preparing for final exams week and expects a very high density of users in the library. The IT team wants to proactively optimize the wireless network to handle the increased load. The APs are all dual-band capable. Which two RRM configurations would be most effective in this scenario? (Select all that apply.)

- A. In the RF Template, setting channel widths to 80 MHz in the 5 GHz band.
- B. In the RF Template, allowing RRM to automatically manage channel and power settings.
- C. In the RF Template, setting the "Dual Band Radio Settings" to "Auto" to allow auto-conversion of 2.4 GHz radios to 5 GHz.
- D. Manually setting all APs to use channel 1 in the 2.4 GHz band.
- E. In the RF Template, setting the "2.4 GHz Settings" to "Disabled" for the entire site.

Answer: B,C

#### NEW QUESTION # 42

Which two terms correctly describe transmissions over Wi-Fi? (Choose two.)

- A. full-duplex
- B. half-duplex
- C. point-to-point medium
- D. shared medium

Answer: A,D

#### NEW QUESTION # 43
