- A. Confirm primary HCM settings
- B. **Confirm primary logistics settings**
- C. Confirm primary finance settings
- D. **Define the scope**
- E. Create two projects

**Answer: B,D,E**

Explanation:

For implementing SAP S/4HANA Cloud Public Edition for a customer, the following systems are commonly used:

\* Sandbox system: This system is used in the very early stages of the project for exploration and trying out different configurations without affecting the development or production environments. It's a safe space for experimentation.

\* Development system: This system is where the initial setup and customizations are made. Configuration changes, custom development, and extensions are carried out here before being moved to the test system for further testing.

\* Test system: After configurations and developments are done in the development system, they are transported to the test system. This environment is used for rigorous testing to ensure that everything works as expected and to identify any issues before moving to the production environment.

These systems play crucial roles in the implementation process, allowing for a structured and phased approach to setting up, customizing, testing, and finally deploying SAP S/4HANA Cloud Public Edition.

#### **NEW QUESTION # 25**

Which solution is designed to help customers understand their environmental, social, and governance (ESG) data?

- A. SAP Responsible Design and Production
- B. **SAP Sustainability Control Tower**
- C. SAP Sustainability Footprint Management
- D. SAP Green Token

**Answer: B**

#### **NEW QUESTION # 26**
