

Plat-Admn-202 latest exam online & Plat-Admn-202 valid test questions & Plat-Admn-202 test training vce

Before we start develop a new Plat-Admn-202 study materials, we will prepare a lot of materials. After all, we must ensure that all the questions and answers of the Plat-Admn-202 study materials are completely correct. First of all, we have collected all relevant reference books. Most of the Plat-Admn-202 Study Materials are written by the famous experts in the field. They are widely read and accepted by people. Through careful adaption and reorganization, all knowledge will be integrated in our Plat-Admn-202 study materials.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
Topic 2	<ul style="list-style-type: none">• Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.

Topic 3	<ul style="list-style-type: none"> • User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.
Topic 4	<ul style="list-style-type: none"> • Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
Topic 5	<ul style="list-style-type: none"> • App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.

Plat-Admn-202 Mock Exams & Plat-Admn-202 Best Practice

If you find someone around has a nice life go wild, it is because that they may have favored the use of study & work method different from normal people. Plat-Admn-202 dumps torrent files may be the best method for candidates who are preparing for their IT exam and eager to clear exam as soon as possible. People's success lies in their good use of every change to self-improve. Our Plat-Admn-202 Dumps Torrent files will be the best resources for your real test. If you choose our products, we will choose efficient & high-passing preparation materials.

Salesforce Certified Platform App Builder Sample Questions (Q148-Q153):

NEW QUESTION # 148

The VP of sales at AW Computing would like a Roll-Up Summary field on the Account object to aggregate the amount of opportunities related to an Account. The app builder is unable to implement this change.

Why is the app builder unable to fulfill the request?

- A. The default currency is not an active currency in the organization,
- B. Roll-Up Summary fields are unavailable on the Account object.
- C. Currency fields are unable to be referenced in Roll-Up Summary fields.
- **D. The organization has Advanced Currency Management enabled**

Answer: D

Explanation:

The inability to create a Roll-Up Summary field in this context can be attributed to:

B . The organization has Advanced Currency Management enabled. When Advanced Currency Management (ACM) is enabled, it affects how currency data is managed and aggregated, impacting the functionality of roll-up summary fields that involve currency amounts across different records.

To address this limitation, consider using custom reporting or a custom solution like a trigger or a scheduled batch class to manually calculate and update the total.

For more information on limitations with ACM, consult Salesforce's help article on Advanced Currency Management.

NEW QUESTION # 149

The DreamHouse Realty (DR) service manager has asked for some improvements in case management to enforce process compliance so that cases are unable to be reverted to an earlier case status, and to ensure that certain fields are required when specific case criteria are met.

What solution should an app builder implement to meet these requirements?

- **A. A Validation Rules**
- B. Process Builder
- C. Activities Component
- D. Workflow Rules

Answer: A

Explanation:

A validation rule can enforce process compliance by preventing users from saving records that do not meet certain criteria. In this case, a validation rule can prevent users from reverting to an earlier case status or leaving certain fields blank when specific case criteria are met

NEW QUESTION # 150

Cloud Kicks works on an annual subscription model. When a sale rep marks an opportunity as closed won, a new opportunity should automatically be created for the renewal. The contracts team works outside of salesforce but also needs to be notified about closed deals in order to initial the contract process with the customer.

Which automation solution would meet these requirements?

- A. Approval Process
- B. Outbound Message
- C. Validation Rule
- **D. Record-triggered flow**

Answer: D

Explanation:

A record-triggered flow can be used to automate actions when a record is created or updated. In this case, a record-triggered flow can be configured to create a new opportunity and send an email to the contracts team when an opportunity is marked as closed won.

NEW QUESTION # 151

AW Computing has a custom object for service plans.

A service plan needs to be associated to one and only one contact. The support manager noticed if the wrong contact is associated, the reps are unable to change the contact. The app builder already confirmed the user has correct access to the field and there are no validations associated with the service plans.

What could be causing the issue?

- A. The Allow reparenting checkbox, Child records can be reparented to other parent records after they are created, is checked.
- B. The Read/Write radio button, Allows users with at least Read/Write access to the Master record to create, edit, or delete related Detail records, is selected.
- **C. The Allow reparenting checkbox, Child records can be reparented to other parent records after they are created, is unchecked.**
- D. The Read Only radio button, Allows users with at least Read access to the Master record to create, edit, or delete related Detail records, is selected.

Answer: C

Explanation:

The issue described occurs due to the settings in the master-detail relationship. Specifically:

The Allow reparenting checkbox, Child records can be reparented to other parent records after they are created, is unchecked (B). This setting prevents changing the parent record (contact) of a child record (service plan) once it has been set. If 'Allow reparenting' is unchecked, it restricts the ability to change the associated contact, leading to the issue observed.

The other options do not directly address the inability to change the associated contact on a service plan record. The 'Read Only' and 'Read/Write' settings (A and C) pertain to access rights to the detail records based on the master record's access but do not affect the ability to reparent a record.

For a detailed understanding of master-detail relationships and their settings, including reparenting, see the Salesforce documentation on relationships:

Master-Detail Relationships: https://help.salesforce.com/articleView?id=relationships_considerations.htm&type=5

NEW QUESTION # 152

The app builder at Ursa Major Solar created a master-detail relationship between a parent object Galaxy__c and child object Star__c.

What is the effect of creating this type of relationship if users want to report on Galaxy__c with Star__c?

- A. A Star__c report type with Galaxy__c as a field will be automatically created.
- B. A new custom report type will need to be created for Star__c with lookup fields from Galaxy__c.
- C. A new custom report type will need to be created for Galaxy__c with Star__c.
- **D. A Galaxy__c with Star__c report type will be automatically created.**

Answer: D

Explanation:

When a master-detail relationship is created between two objects, Salesforce automatically creates a standard report type that allows users to report on the parent and child together.

Why A (Galaxy__c with Star__c) is correct: Exact Extract: "When you create a master-detail relationship, Salesforce automatically creates a primary report type that includes records from both the master and its detail." - Salesforce Help | Standard Report Types Therefore, a "Galaxy__c with Star__c" report type is automatically generated, allowing users to create reports showing all child records (Star__c) related to each parent (Galaxy__c).

Why A (Galaxy__c with Star__c) is correct: Exact Extract: "When you create a master-detail relationship, Salesforce automatically creates a primary report type that includes records from both the master and its detail." - Salesforce Help | Standard Report Types Therefore, a "Galaxy__c with Star__c" report type is automatically generated, allowing users to create reports showing all child records (Star__c) related to each parent (Galaxy__c).

Why not B: The parent-to-child relationship drives the report type. A "Star__c with Galaxy__c" type is not automatically created.

Why not C or D: Custom report types are only needed if you want to include additional related objects or modify relationships; Salesforce automatically provides one for master-detail pairs.
