LatestCram team of professionals made this product after working day and night so that users can prepare from it for the Fortinet NSE8_812 certification test successfully. LatestCram even guarantees that you will pass the Fortinet NSE 8 - Written Exam (NSE8_812) (NSE8_812) test on the first try by preparing with real questions. If you fail to pass the certification exam, despite all your efforts, you could get a full refund from LatestCram according to terms and conditions.

Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q28-Q33):

NEW QUESTION # 28

Refer to the exhibit.

A customer wants to automate the creation and configuration of FortiGate VM instances in a VMware vCenter environment using Terraform. They have the creation part working with the code shown in the exhibit.

Which code snippet will allow Terraform to automatically connect to a newly deployed FortiGate if its IP was dynamically assigned by VMware NSX-T?

- A. ☐

- B. ☐
- C. ☒
- D. ☐

Answer: C

NEW QUESTION # 29

You are deploying a FortiExtender (FEX) on a FortiGate-60F. The FEX will be managed by the FortiGate. You anticipate high utilization. The requirement is to minimize the overhead on the device for WAN traffic. Which action achieves the requirement in this scenario?

- A. Add a switch between the FortiGate and FEX.
- B. Enable CAPWAP connectivity between the FortiGate and the FortiExtender.
- C. Change connectivity between the FortiGate and the FortiExtender to use VLAN Mode
- D. Add a VLAN under the FEX-WAN interface on the FortiGate.

Answer: C

Explanation:

VLAN Mode is a more efficient way to connect a FortiExtender to a FortiGate than CAPWAP Mode. This is because VLAN Mode does not require the FortiExtender to send additional control traffic to the FortiGate.

The other options are not correct.

* A. Add a switch between the FortiGate and FEX. This will add overhead to the network, as the switch will need to process the traffic.

* B. Enable CAPWAP connectivity between the FortiGate and the FortiExtender. This will increase the overhead on the FortiGate, as it will need to process additional control traffic.

* D. Add a VLAN under the FEX-WAN interface on the FortiGate. This will not affect the overhead on the FortiGate.

<http://docs.fortinet.com/document/fortiextender/7.0.3/admin-guide-fgt-managed/618684/vlan-mode-and-performance>

NEW QUESTION # 30

An automation stitch was configured using an incoming webhook as the trigger named 'my_incoming_webhook'. The action is configured to execute the CLI Script shown:

☐

- A. ☐
- B. ☐
- C. ☒
- D. ☐

Answer: C

Explanation:

To execute the CLI script shown using an incoming webhook as the trigger, the correct syntax for the curl command is: curl -X POST -H "Content-Type: application/json" -d '{"trigger_name":"my_incoming_webhook"}'

<https://fortisoar.example.com/api/v1/trigger> This command will send a POST request to the FortiSOAR API endpoint with the trigger name and the content type as JSON. The FortiSOAR API will then execute the automation stitch that matches the trigger name and run the CLI script on the FortiGate device. Reference: <https://docs.fortinet.com/document/fortisoar/7.0.0/administration-guide/103440/automation-stitches> <https://docs.fortinet.com/document/fortisoar/7.0.0/administration-guide/103441/incoming-webhook>

NEW QUESTION # 31

Refer to the exhibits.

The exhibits show a diagram of a requested topology and the base IPsec configuration.

A customer asks you to configure ADVPN via two internet underlays. The requirement is that you use one interface with a single IP address on DC FortiGate.

In this scenario, which feature should be implemented to achieve this requirement?

- A. Use network-overlay id
- B. Use local-id
- C. Use peer-id
- D. Change advpn2 to IKEv1

Answer: A

Explanation:

A is correct because using network-overlay id allows you to configure multiple ADVPN tunnels on a single interface with a single IP address on the DC FortiGate. This is explained in the FortiGate Administration Guide under ADVPN > Configuring ADVPN > Configuring ADVPN on the hub. References: <https://docs.fortinet.com/document/fortigate/7.4.0/administration-guide/978793/advpn>
<https://docs.fortinet.com/document/fortigate/7.4.0/administration-guide/978793/advpn/978794/configuring-advpn>

NEW QUESTION # 32

Refer to the exhibits.

An administrator has configured a FortiGate and Forti Authenticator for two-factor authentication with FortiToken push notifications for their SSL VPN login. Upon initial review of the setup, the administrator has discovered that the customers can manually type in their two-factor code and authenticate but push notifications do not work. Based on the information given in the exhibits, what must be done to fix this?

- A. On FG-1 port1, the fm access protocol must be enabled.
- B. On FG-1 CLI, the fm-push server setting must point to 100.64.141.
- C. FAC-1 must have an internet routable IP address for push notifications.
- D. On FAC-1, the FortiToken public IP setting must point to 100.64.1 41

Answer: D

Explanation:
