

# Pass Guaranteed 2026 Microsoft Fantastic AZ-104 Exam Duration

---

## AZ-104 Renewal Exam (2025/2026) – Updated Questions and Verified Answers | 100% Guaranteed Microsoft Pass

---

### Question 1

You need to assign a role to a user to manage all resources in a specific Azure resource group. Which role should you assign?

- A. Owner
- B. Contributor
- C. Reader
- D. User Access Administrator

**Correct Answer: B. Contributor**

**Rationale:** The Contributor role grants full access to manage all resources within a resource group without allowing changes to role assignments, unlike the Owner role. Reader only allows view access, and User Access Administrator is for managing access, not resources.

### Question 2

What should you configure to enforce multi-factor authentication (MFA) for users accessing Azure resources from untrusted locations?

- A. Azure AD Conditional Access policy
- B. Azure AD Identity Protection
- C. Azure AD Privileged Identity Management
- D. Azure Security Center

**Correct Answer: A. Azure AD Conditional Access policy**

**Rationale:** Conditional Access policies in Azure AD enforce MFA based on conditions like location, ensuring secure access to Azure resources from untrusted networks.

### Question 3

P.S. Free 2026 Microsoft AZ-104 dumps are available on Google Drive shared by DumpsTorrent: [https://drive.google.com/open?id=1\\_WVYVsrxnaqTwA4UO7DValfsUKp4KJJj](https://drive.google.com/open?id=1_WVYVsrxnaqTwA4UO7DValfsUKp4KJJj)

## AZ-104 Sample Questions Answers - New AZ-104 Test Simulator

In addition to the comprehensive Microsoft AZ-104 practice exams, our product also includes Microsoft Azure Administrator (AZ-104) PDF questions developed by our team to help you get prepared in a short time. Our Prepare for your Microsoft Azure Administrator (AZ-104) PDF format works on all smart devices without limits of time and place.

### Microsoft Azure Administrator Sample Questions (Q171-Q176):

#### NEW QUESTION # 171

You have an Azure subscription that contains the hierarchy shown in the following exhibit.

☐ You create an Azure Policy definition named Policy1.

To which Azure resources can you assign Policy and which Azure resources can you specify as exclusions from Policy1? To answer, select the appropriate options in the answer NOTE Each correct selection is worth one point.

**Answer:**

Explanation:

☐ Explanation:

1. Tenant Root Group, ManagementGroup1, Subscription1 and RG1

<https://learn.microsoft.com/en-us/answers/questions/1086208/assign-policy-to-specific-resource-in-azure>

2. ManagementGroup1, Subscription1, RG1, and VM1

#### NEW QUESTION # 172

HOTSPOT

You have the App Service plan shown in the following exhibit.

☐ The scale-in settings for the App Service plan are configured as shown in the following exhibit.

☐ The scale out rule is configured with the same duration and cool down time as the scale in rule.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Hot Area:

☐

**Answer:**

Explanation:

☐ Section: [none]

Explanation:

Box 1: 5

The maximum 5 will be kept as the CPU Usage >= 30.

Box 2: 3

As soon as the average CPU usage drops below 30%, the count will decrease by 1. After the 5 minute cool-down it will decrease by another 1, reaching 3.

<https://docs.microsoft.com/en-us/azure/storage/common/storage-account-overview>

#### NEW QUESTION # 174

You have an app named App1 that runs on an Azure web app named webapp1.

The developers at your company upload an update of App1 to a Git repository named GUI.

Webapp1 has the deployment slots shown in the following table.

You need to ensure that the App1 update is tested before the update is made available to users. Which two actions should you perform? Each correct answer presents part of the solution.

NOTE Each correct selection is worth one point.

- A. Stop webapp1-test
- **B. Swap the slots.**
- C. Stop webapp1 prod.
- **D. Deploy the App1 update to webapp1-test, and then test the update.**
- E. Deploy the App1 update to webapp1-prod, and then test the update.

**Answer: B,D**

Explanation:

You can validate web app changes in a staging deployment slot before swapping it with the production slot. Deploying an app to a slot first and swapping it into production makes sure that all instances of the slot are warmed up before being swapped into production. This eliminates downtime when you deploy your app. The traffic redirection is seamless, and no requests are dropped because of swap operations. You can automate this entire workflow by configuring auto swap when pre-swap validation isn't needed.

After the swap you can deploy the App1 update to webapp1-test, and then test the update. If the changes swapped into the production slot aren't as per your expectation then you can perform the same swap immediately to get your "last known good site" back.

#### NEW QUESTION # 175

You have an Azure subscription that contains an Azure Service Bus named Bus1.

Your company plans to deploy two Azure web apps named App1 and App2. The web apps will create messages that have the following requirements:

\* Each message created by App1 must be consumed by only a single consumer

\* Each message created by App2 will be consumed by multiple consumers.

Which resource should you create for each web app? To answer, drag the appropriate resources to the correct web apps. Each resource may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:
