問題 #63

A Network Architect is explaining the Avi Vantage architecture to a new team member. Which statement best describes what it means to have a distributed data plane?

- A. Multiple Service Engines are deployed close to the applications, and each SE actively processes traffic.
- B. All client traffic is sent to a central, monolithic load balancer before being distributed.
- C. Each application is managed by its own dedicated Avi Controller.
- D. The Avi Controller is deployed as a three-node cluster, distributing the control plane tasks.

答案：A

問題 #64

Which deployment mode allows Avi to work directly with a VMware vSphere environment?

- A. Cloud Connector mode
- B. Static mode
- C. VMware Cloud mode
- D. No-Access mode

答案: A

問題 #65

A Service Engine in the data plane detects that a backend server in a pool has failed its health check. What is the sequence of events that follows?

- A. The Service Engine sends an email alert directly to the administrator.
- B. The Service Engine sends the health status data up to the Avi Controller, which then marks the server as DOWN and updates any other relevant SEs.
- C. The Service Engine immediately stops sending traffic to the failed server and notifies the other SEs directly.
- D. The Service Engine waits for the administrator to manually mark the server as DOWN in the UI.

答案: B

問題 #66

A DevOps Engineer is explaining the Avi architecture to a new team member. Which component is part of the distributed data plane and is directly responsible for processing all client- to-server traffic?

- A. The Avi Controller
- B. The vCenter Server
- C. The Service Engine (SE)
- D. The Avi Kubernetes Operator (AKO)

答案: C

問題 #67

A DevOps engineer is creating a script to parse Avi logs and automatically alert the security team about high-severity WAF events. The script needs to differentiate between a simple log of a WAF- inspected-but-clean request and a log of a request that was actively blocked. How will the log entries for these two events differ?

- A. The blocked request will have a different "VIP" address in the log entry.
- B. The blocked request will not have a "Server IP" field, as it was never sent to the pool.
- C. The blocked request will be a "Significant Log", while the clean request will be a "Non-Significant Log".
- D. The blocked request's log entry will be encrypted, while the clean request's log will be in plain text.

答案: C
