As long as the users choose to purchase our PDII exam preparation materials, there is no doubt that he will enjoy the advantages of the

most powerful update.

Salesforce Platform Developer II Sample Questions (Q19-Q24):

NEW QUESTION # 19
A company wants to run different logic based on an Opportunity's record type.
Which code segment handles this request and follows best practices?

- A. ☐
- B. ☐
- C. ☐
- D. ☐

Answer: B

Explanation:
The correct way to handle this request and follow best practices is to use option C. Option C uses a SOQL query with a subquery to filter the Opportunities by record type and then iterate over the results. This way, the developer can avoid hardcoding the record type names or IDs, which can change in different environments or languages, and use the relationship name between Opportunity and RecordType to access the record type name. This also reduces the number of SOQL queries and the number of iterations, as the developer only queries the Opportunities that match the record type criteria and does not need to check the record type name in the loop. Option C also follows the best practices for writing SOQL queries, such as using bind variables, avoiding unnecessary fields, and using selective filters12. Reference: [SOQL and SOSL Queries], [SOQL Relationships], [SOQL Best Practices]

NEW QUESTION # 20
Universal Containers wants to notify an external system in the event that an unhandled exception occurs when their nightly Apex batch job runs.
What is the appropriate publish/subscribe logic to meet this requirement?

- A. Have the external system subscribe to a custom
  Platform Event that gets fired with EventBus.publish(1,
- B. Have the external system subscribe to a standard Platform Event that gets fired.
- C. Have the external system subscribe to a standard
  Platform Event that gets fired with with Eventbus.publish(1.
- D. Have the external system subscribe to a custom Platform Event that gets fired with addError{}.

Answer: A

Explanation:
To notify an external system about an unhandled exception in a batch job, the appropriate approach is to have the external system subscribe to a custom Platform Event that gets published using EventBus.publish(). When an exception occurs, the batch job can publish this event which the external system can listen for and respond to accordingly. References:
Platform Events Developer Guide

NEW QUESTION # 21
A developer has created a Visualforce page that uses a third-party JavaScript framework. The developer has decided to supply data to the JavaScript functions using JavaScript Remoting for Apex Controllers.
What is the correct syntax to declare a remote method in Apex? (Choose two.)

- A. @RemoteAction public static String getTable()
- B. @RemoteAction global static String getTable()
- C. @RemoteObject global static String getTableQ
- D. @RemoteAction global String getTable()

Answer: A,B

NEW QUESTION # 22

How should a developer assert that a trigger with an asynchronous process has successfully run?

- A. Create all test data in the test class, use system. runs {} to invoke the trigger, then perform assertions.
- B. Create all test data, use future in the rest class, then perform assertions.
- C. Insert records into Salesforce, use seeAllData=true, then perform assertions.
- D. Create all test data in the test class, invoke Test.startTest{} and Test.etopTaat {} and then perform assertions.

Answer: D

Explanation:
Use Test.startTest() and Test.stopTest(). These methods ensure asynchronous code runs within test execution and allows for accurate assertions.References: Testing Asynchronous Apex

NEW QUESTION # 23

Consider the code above.

When a user dicks on the Link of a Contact's name, what happens'

- A. The page refreshes, showing the Contact's details.
- B. The outputPanel refreshes, showing the Contacts details.
- C. Nothing happens: the commandLink is missing an action attribute.
- D. A new page opens, showing the Contact's details.

Answer: B

NEW QUESTION # 24

......
