最新的 SAP Certified Associate C_S4EWM_2023 免費考試真題 (Q12-Q17):

問題 #12

How do you control the physical inventory procedures which can be done in a specific part of the warehouse?

- A. You define a queue and assign this to the physical inventory area
- B. You assign bins directly to the physical inventory area
- C. You define an activity area and assign this to the physical inventory area
- D. You define a storage section and assign this to the physical inventory area.

答案：C

解題說明：

To control physical inventory procedures for a specific part of the warehouse:

* C. Define an Activity Area and Assign It to the Physical Inventory Area:

* Activity areas group bins or storage sections for specific warehouse activities, such as physical inventory.

* Assigning the activity area to the physical inventory area restricts procedures to that section.

Incorrect Options:

* A: Queues manage task execution but are not used for physical inventory.

* B: Bins can be grouped, but assignment alone is insufficient.

* D: Storage sections define physical locations but are not directly linked to inventory areas.

問題 #13

An exception code can be triggered by the system or entered by a user. What must you assign to an external exception code? Note: There are 2 correct answers to this question.

- A. An execution step
- B. A business context
- C. A workflow as a follow-on action
- D. An internal exception code

答案：B,D

解題說明:

Comprehensive and Detailed In-Depth Explanation:

External exception codes in SAP EWM handle deviations. Option B ("A business context") is correct as it defines where the code applies (e.g., picking), and option C ("An internal exception code") is correct because it maps the external code to an internal action, both configured in SPRO: SCM Extended Warehouse Management > Cross-Process Settings > Exception Handling > Define Exception Codes. Option A (workflow) is optional, and option D (execution step) is not a standard assignment.

問題 #14

Which of the following are product warehouse tasks during putaway with process-oriented storage control?

- A. The final process step
- **B. The first and final process steps**
- C. All process steps
- D. The first process step

答案: **B**

解題說明:

Comprehensive and Detailed In-Depth Explanation:

In process-oriented storage control (POSC) for putaway, warehouse tasks are created for specific steps.

Option D ("The first and final process steps") is correct because tasks are generated for the initial step (e.g., unloading) and the final step (e.g., putaway to bin), as defined in the storage process configuration in SPRO:

SCM Extended Warehouse Management > Cross-Process Settings > Process-Oriented Storage Control.

Option A (all steps) includes intermediate steps not always task-based, while B and C are too restrictive.

問題 #15

Which of the following are internal goods movements? Note: There are 3 correct answers to this question.

- **A. Ad hoc movements**
- **B. Warehouse reorganization**
- **C. Replenishment**
- D. Direct putaway
- E. Slotting

答案: **A,B,C**

解題說明:

Internal goods movements in SAP EWM include:

* B. Ad Hoc Movements:

* Unplanned movements of stock to meet operational needs.

* C. Warehouse Reorganization:

* Optimizing storage space by rearranging stock locations.

* D. Replenishment:

* Refilling picking locations from bulk storage to ensure stock availability.

Incorrect Options:

* A: Slotting is a planning process for determining optimal storage locations, not an internal goods movement.

* E: Direct putaway is part of inbound processing, not an internal movement.

問題 #16

What does SAP recommend for the distribution of master data information via IDoc in a system landscape with a decentralized EWM based on SAP S/4HANA.

- **A. Define a distribution model with the Core Interface (CIF).**
- B. Define reduced message types for materials, customer, and vendors.

- 答案：A
