Having a Integration-Architect certificate is a task that every newcomer rookie dreams about. With it, you can not only become the elite in the workplace in the eyes of leaders, but also get a quick promotion and a raise, and maybe you have the opportunity to move to a better business. Whether you are a student or an office worker, you can be satisfied here, and you will never regret if you choose Integration-Architect Exam Torrent. For we have successfully help tens of thousands of candidates achieve their aims. We believe you won't be the exception to pass the Integration-Architect exam and get the dreaming Integration-Architect certification.

Salesforce Integration-Architect Certification Exam is a globally recognized certification program that validates the expertise and skills of integration architects in designing and implementing complex integration solutions using the Salesforce platform. Salesforce Certified Integration Architect certification exam is designed for experienced integration architects who possess a deep understanding of integration patterns, data modeling, security, and performance best practices.

Reliable Integration-Architect Exam Guide | Integration-Architect Exam Brain Dumps

The practice materials of the exam with low quality may complicate matters of the real practice exam. So, you must know about our Integration-Architect question torrent. Our study material is not same as other dumps or study tools, it not only has good quality but also has cheap price. We have most professional team to compiled and revise Integration-Architect Exam Question, in order to try our best to help you pass the exam and get a better condition of your life and your work.

Salesforce Certified Integration Architect Sample Questions (Q114-Q119):

NEW QUESTION # 114

Northern Trail Outfitters (NTO) has hired an Integration Architect to design the integrations between existing systems and a new instance of Salesforce. NTO has the following requirements:

1. Initial load of 2M Accounts, 5.5M Contacts, 4.3M Opportunities, and 45k Products into the new org.
2. Notification of new and updated Accounts and Contacts needs to be sent to 3 external systems.
3. Expose custom business logic to 5 external applications in a highly secure manner.
4. Schedule nightly automated dataflows, recipes and data syncs.

Which set of APIs are recommended in order to meet the requirements?

- A. Bulk API, Streaming API, Apex SOAP API, Analytics REST API
- **B. Bulk API, Streaming API, Apex REST API, Analytics REST API**
- C. Bulk API, Chatter REST API, Apex REST API, Analytics REST API

- D. Bulk API, Chatter REST API, Apex SOAP API, Tooling API

Answer: B

NEW QUESTION # 115

An Integration Architect has designed a mobile application for Salesforce users to get data while on the road using a custom UI. The application is secured with OAuth and is currently functioning well. There is a new requirement where the mobile application needs to obtain the GPS coordinates and store it on a custom geolocation field.

The geolocation field is secured with Field Level Security, so users can view the value without changing it.

What should be done to meet the requirement?

- A. The mobile device makes a SOAP API inbound call. The mobile device receives a REST Apex callout call.
- **B. The mobile device makes a REST Apex inbound call.**
- C. The mobile device makes a REST API inbound call.

Answer: B

Explanation:

Explanation

The mobile device should make a REST Apex inbound call to meet the requirement. A REST Apex inbound call allows the mobile device to invoke custom Apex logic on Salesforce using a RESTful interface. The Apex logic can then access the geolocation field using the user's OAuth token and update it with the GPS coordinates from the mobile device. The geolocation field is secured with Field Level Security, so the user can view the value without changing it. A SOAP API inbound call or a REST API inbound call would not be able to access the custom geolocation field, as they are not supported by the standard Salesforce objects and fields.

NEW QUESTION # 116

Northern Trail Outfitters is creating a distributable Salesforce package. The package needs to call into a custom Apex REST endpoint in the central org. The security team wants to ensure a specific integration account is used in the central org that they will authorize after installation of the package. Which item should an architect recommend to secure the integration?

- A. Use an encrypted field to store the password.
- B. Contact Salesforce Support and create a case to temporarily enable API access for managed packages.
- **C. Create a connected app in the central org and add the callback URL for each org in the package it is installed in to redirect after a successful authentication.**

Answer: C

Explanation:

To securely integrate a distributed package with a central "Hub" org, the architect should utilize the OAuth 2.0 Web Server Flow. In this model, a Connected App is created in the central org to act as the identity and access provider. A critical component of this setup is the Callback URL (Redirect URI). When a user in the "Subscriber" org (where the package is installed) initiates the connection, Salesforce redirects them to the central org to authorize the access. After successful authentication, the central org needs the correct callback URL to return the authorization code to the specific subscriber org.

Using this flow satisfies the security team's requirement for a specific integration account. The administrator in the central org can pre-authorize specific profiles or permission sets to use the Connected App, ensuring that only the designated integration user's credentials are used to fulfill requests. Option A is a security "anti-pattern" (storing passwords in fields), and Option C is unnecessary as API access is a standard feature. This OAuth-based approach provides a secure, revocable, and standardized way to manage cross-org communication in a multi-tenant environment.

NEW QUESTION # 117

A global financial company with a core banking system processing 1 million transactions per day wants to build a community portal. Customers need to review their bank account details and transactions. What should an integration architect recommend to enable community users to view their financial transactions?

- A. Use Iframe to display core banking financial transactions data in the customer community.
- **B. Use Salesforce Connect to display the financial transactions as an external object.**

Answer: B

Explanation:

When dealing with high-volume data (1 million transactions per day) that does not need to be stored natively in Salesforce, the architect should recommend Data Virtualization via Salesforce Connect.

Salesforce Connect allows the company to display external data as External Objects. This approach provides several architectural advantages for a banking community:

* No Data Storage: Transactions remain in the core banking system, avoiding the massive storage costs and complex synchronization logic required to house millions of records natively in Salesforce.

* Real-Time Visibility: Because External Objects are queried on-demand via the OData protocol or a custom Apex adapter, customers see the most up-to-date transaction history every time they refresh the page.

While an IFrame (Option B) is technically possible, it is often discouraged due to security concerns (such as clickjacking) and a poor user experience, as the IFrame does not natively integrate with Salesforce UI components or reporting. Salesforce Connect provides a "seamless" look and feel, allowing External Objects to be used in related lists and Lightning components just like standard Salesforce records, while keeping the heavy data burden on the performant core banking system.

NEW QUESTION # 118

Northern Trail Outfitters (NTO) uses different shipping services for each of the 34 countries it serves.

Services are added and removed frequently to optimize shipping times and costs. Sales Representatives serve all NTO customers globally and need to select between valid service(s) for the customer's country and request shipping estimates from that service.

Which two solutions should an architect propose?

Choose 2 answers

- A. Invoke middleware service to retrieve valid shipping methods.
- B. Use Platform Events to construct and publish shipper-specific events.
- C. Use middleware to abstract the call to the specific shipping services.
- D. Store shipping services in a picklist that is dependent on a country picklist.

Answer: A,C

Explanation:

Invoking middleware service to retrieve valid shipping methods is a solution that can allow the sales representatives to select between valid services for the customer's country. The middleware service can act as a single point of entry for all shipping services and provide routing and transformation capabilities. Using middleware to abstract the call to the specific shipping services is a solution that can allow the sales representatives to request shipping estimates from the selected service. The middleware can hide the complexity and heterogeneity of the shipping services and provide mediation and orchestration capabilities. Using Platform Events to construct and publish shipper-specific events is not a solution, as Platform Events are used for event-driven integration, not for web-service integration. Storing shipping services in a picklist that is dependent on a country picklist is not a solution, as it does not address how to request shipping estimates from the shipping services. NEW QUESTION # 119

.....

Our Integration-Architect study guide is convenient for the clients to learn and they save a lot of time and energy for the clients. After the clients pay successfully for the Integration-Architect exam dump they can immediately receive our products in the form of mails in 5-10 minutes and then click on the links to use our software to learn. The clients only need 20-30 hours to learn and then they can attend the test. For those in-service office staff and the students who have to focus on their learning this is a good new because they have to commit themselves to the jobs and the learning and don't have enough time to prepare for the test. Learning the Integration-Architect prep material takes you less than a week and you can learn them in the weekends or use your leisure time to learn them.
