Attend a Live Session  
Self-paced course

As for the points you may elapse or being frequently tested in the real exam, we give referent information, then involved them into our C\_S43\_2601 practice materials. Their expertise about C\_S43\_2601 practice materials is unquestionable considering their long-time research and compile. Furnishing exam candidates with highly effective materials, you can even get the desirable outcomes within one week. By concluding quintessential points into C\_S43\_2601 practice materials, you can pass the exam with the least time while huge progress.

After taking a bird's eye view of applicants' issues, DumpsMaterials has decided to provide them with the Real C\_S43\_2601 Questions. These SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) (C\_S43\_2601) dumps pdf is according to the new and updated syllabus so they can prepare for SAP certification anywhere, anytime, with ease. A team of professionals has made the product of DumpsMaterials after much hard work with their complete potential so the candidates can prepare for SAP practice test in a short time.

>> C\_S43\_2601 Latest Exam Cost <<

## C\_S43\_2601 Latest Test Report & Practice C\_S43\_2601 Test Engine

Although it is not an easy thing for somebody to pass the C\_S43\_2601 exam, DumpsMaterials can help aggressive people to achieve their goals. More qualified C\_S43\_2601 certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition. This is the reason why we need to recognize the importance of getting our C\_S43\_2601 Quiz torrent. And with our C\_S43\_2601 exam questions, your dream will be easy to come true.

## SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Sample Questions (Q11-Q16):

### NEW QUESTION # 11

Create a Task List

The project team evaluates during the implementation project Task Lists in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Create a Task List header
- \* Create Task List operations
- \* Create a Task List with 3 Task List operations. Maintenance Strategy Z## comprises Maintenance Packages with different hierarchy levels.

Use the following information at header level of the Task List:

Field	Value
Group	TL-##
Group Counter	1
Planning Plant	1010
Description	Regular Maintenance GR##
Work Center	MK-00
Work Center Plant	1010
Usage	4
Planner Group	##
Maintenance Strategy	Z##

Use the following information for each Task List operation:

Field	Value
Work Ctr	MK-00
Plnt	1010
Control Key	PM01
Work	30
Unit	MIN

\* Assign Maintenance Packages to the Task List Operations as follows:

- \* Operation 10 is to be performed monthly.
- \* Operation 20 is to be performed every 4 months.
- \* Operation 30 is to be performed every 12 months.

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Since we encountered that error with the Z48 strategy , we must ensure that is fixed before we can finish the Task List. Here is the complete, verified, step-by-step process to finalize Task 7 , including the "hidden" pre- requisite.

Task 7: Create a General Task List

Objective : To create a standardized template of maintenance steps that can be automatically pulled into future work orders based on a schedule.

Step 1: The Pre-requisite (Fixing Strategy Z48)

If you haven't done this yet, SAP will not let you save the Task List.

- \* Transaction : IP11 (Maintain Maintenance Strategies).
- \* Action : Click New Entries .
- \* Strategy : Z48
- \* Description : Strategy for Group 48
- \* Strategy Unit : MON (Months).
- \* Packages : On the left, double-click Packages , then click New Entries :
- \* Line 1 : Cycle 1 / Unit MON / Text Monthly
- \* Line 2 : Cycle 4 / Unit MON / Text Every 4 Months
- \* Line 3 : Cycle 12 / Unit MON / Text Yearly
- \* Save (Floppy Disk icon).

Explanation : A strategy is the "calendar" that defines how often work happens. Without this, the system doesn't know what

"Monthly" or "Yearly" means.

Step 2: Create Task List Header

- \* Transaction : IA05 .
- \* Initial Screen : Group TL-48, Group Counter 1. Press Enter .
- \* Header Fields :
- \* Description : Regular Maintenance GR48
- \* Planning Plant : 1010
- \* Work Center : MK-00 / Plant : 1010
- \* Usage : 4 (Plant Maintenance)
- \* Status : 4 (Released)
- \* Planner Group : P48
- \* Maint. Strategy : Z48

Explanation : The header defines who is responsible for the work (Planner Group P48) and which scheduling rules (Strategy Z48) apply to the whole list.

Step 3: Create Operations

- \* Click the Operations button (F6) at the top.
- \* Enter three rows with this data:
- \* Op 10 : Work Center MK-00, Plant 1010, Control Key PM01, Work 30, Unit MIN.
- \* Op 20 : (Same as above).
- \* Op 30 : (Same as above).

Explanation : Operations are the actual steps the technician follows. Here, we are saying each step takes 30 minutes of mechanical labor.

Step 4: Assign Maintenance Packages (The "Frequencies")

This is the most important part of Task 7. We tell SAP which operation happens when.

- \* Select Row 10 (click the box at the far left of the row).
- \* Go to Menu: Goto > Maintenance Packages .
- \* Check the box for the 1 Month package. Click the Back (Green Arrow) icon.
- \* Select Row 20 .
- \* Go to Goto > Maintenance Packages and check the 4 Month package. Click Back .
- \* Select Row 30 .
- \* Go to Goto > Maintenance Packages and check the 12 Month package. Click Back .

Explanation : Now, SAP knows that Op 10 happens every month, but Op 30 only happens once a year.

Step 5: Save

- \* Click the Save icon.
- \* The message at the bottom should say: "Task list TL-48 saved with group counter 1" .

## NEW QUESTION # 12

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

Field	Value
Maint. Plan cat. (via SAP GUI) Maintenance Plan for (via FLP)	Maintenance Order
Maintenance Strategy	Z##
Description	Regular pump maintenance Z##
Equipment	T-PA##
Order Type	PM02
Task List Type	A
Group	TL-##
Counter	1

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

\* Transaction Code : Enter IP42 in the command field and press Enter .

\* Initial Screen :

\* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

\* Maintenance Strategy : Enter Z48 .

\* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

\* Description : Enter Regular pump maintenance Z48 .

\* Equipment : Enter T-PA48 .

\* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

\* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

\* Look for the Task List section at the bottom of the screen.

\* Task List Type : Enter A (General Task List).

\* Group : Enter TL-48 .

\* Counter : Enter 1 .

\* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

\* Click the Save (floppy disk) icon.

\* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

### NEW QUESTION # 13

Task 6: Configure Maintenance Order Types and work with Maintenance Orders The project team evaluates during the implementation project Maintenance Orders in SAP S/4HANA Asset Management. The following features need to be checked:

\* Configure a Maintenance Order Type and create a Maintenance Order

\* Create a Time Confirmation a Maintenance Order

\* Prepare a Maintenance Order for Completion

\* Create a Maintenance Order and save it.

Note:

Make sure that you have maintained all required customizing settings for the Maintenance Order Type.

Use the following information at header level:

Field	Value
Order Type	ZZ##
Description	Repair pump
Priority	Medium
Equipment	T-PA##
Planning Plant. ®	1010
Maintenance activity type	003 Repair
Plnd Costing Va	ZZ01
Act. Costing Va	ZZ01
Priority Type	PM

Plan a Maintenance Order Operation and use the following information:

Field	Value
WkCtr	T-ME##
Plnt	1010
Ctrl key	

\* Create a Time Confirmation for the just created Maintenance Order. Use the following information:

Field	Value
Work Center	T-ME##
Work Center Plant	1010
Actual Work	2 HR
Activity Type	1410
Final Confirmtn	x (select indicator)

\* Display the Actual Costs assigned to the just created Maintenance Order and set it to Technically Completed. Display the Settlement Rule.

Note:

The following information is displayed:

Field	Value
Actual Costs / Internal Labor	60,00 EUR
Sys.Status	TECO CNF JBF1 NMAT PRC SETC
Acct Assignment Cat. (via SAP GUI)	CTR
Settlement Category (via FLP)	Cost Center
Settlement Receiver	4110

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 6 Overview

The goal of this task is to process a repair from start to finish. You will convert the "leaking pump" notification into a work order, plan the labor, record the work performed, and technically close the file.

Step 1: Create the Maintenance Order from Notification

Instead of starting from scratch, we link the order to the notification you created in Task 5.

\* Access the Transaction : Use transaction code IW31 .

\* Initial Screen :

\* Order Type : PM01.

\* Notification : Enter your notification number (e.g., 10000147).

\* Press Enter .

\* Header Data :

\* The description "Pump is leaking" should pull in automatically.

\* Main Work Center : Ensure it is T-ME48.

Explanation : By entering the notification number, SAP automatically pulls in the equipment, functional location, and problem description, ensuring "data integrity" across the maintenance process.

Step 2: Plan the Operations (Labor)

You must tell the system how much effort the repair requires.

\* Go to the Operations Tab .

\* Enter Planning Data :

\* Work : 2.

\* Unit (Un) : H (Hours).

\* Number : 1 (One person).

\* Duration (Dur.) : 2 / Unit : H.

\* Add Enhancement Data :

\* Click the Additional Data tab - > Enhancement sub-tab.

\* In the Field Key box, use the search (F4) to select 0000001 (User-defined fields).

\* In the first text box ( Text 1 ), type: Industrial Z48.

Explanation : Planning the work allows the system to calculate the estimated cost of the repair. The "Enhancement" data is used to store specific technical details (like the motor type) that aren't in the standard SAP fields.

Step 3: Release the Order

An order in "Created" (CRTD) status is just a plan. To start work, it must be "Released" (REL).

\* Release : Look at the top toolbar and click the Green Flag icon .

\* Verify Status : The "Sys.Status" field should now include REL.

\* Save : Click the Save (floppy disk) icon.

Explanation : Releasing the order is the "Green Light" for the shop floor. It allows technicians to charge time to the job and warehouse staff to issue parts.

Step 4: Time Confirmation (Recording the Work)

Now we record that the repair is physically finished.

\* Access the Transaction : Use transaction code IW41 .

- \* Enter Data :
- \* Order : Enter your order number (e.g., 4000395).
- \* Actual Work : 2 H.
- \* Check the boxes for Final Confirmation and No Remaining Work .
- \* Confirmation Text : Pump repaired and tested.
- \* Save : Click the Save icon.

Explanation : This step captures the "Actual Cost." SAP multiplies the 2 hours of labor by the hourly rate of work center T-ME48 to calculate exactly how much this repair cost the company.

#### Step 5: Technical Completion (TECO)

The final administrative step to close the repair file.

- \* Access the Transaction : Use transaction code IW32 .
- \* Complete Technically :
- \* Go to menu: Order > Functions > Complete > Complete (technically) .
- \* Click the Green Checkmark on the popup window.
- \* Save : Click the Save icon.

Explanation : TECO (Technical Completion) locks the order. It tells the system the asset is back in service and prevents any further labor or parts from being charged to this specific job.

### NEW QUESTION # 14

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

- \* Display the automatically created Inspection Lot
- \* Record Inspection Results
- \* Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:

Field	Value
Material	T-PM1100
Plant	1010
Inspection Lot Origin	89 Miscellaneous
Group	CL-DE-00
Group Counter	1

- \* Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

#### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

- \* Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
- \* Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
- \* Verify the Following Data :
- \* Material : T-PM1100
- \* Plant : 1010
- \* Inspection Lot Origin : 89 (Miscellaneous)
- \* Group : CL-DE-00
- \* Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

- \* Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).
- \* Select the Lot : Enter your inspection lot number and click Execute .
- \* Record Results :
- \* Enter the inspection values for each characteristic listed in the checklist.
- \* Ensure the values you enter are within the "Acceptable" range or marked as "Pass".
- \* Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .
- \* Save : Click the Save (floppy disk) icon.

Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.

The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

**NEW QUESTION # 15**

Task 4: Configure and create Technical Objects

The project team evaluates during the implementation project Technical Object structures in SAP S/4HANA Asset Management.

The following features need to be checked:

- \* Configure and create Functional Locations
- \* Create, serialize and install Equipment
- \* Create Functional Location master record ZZ0##-01 and save it. Use the following information:

Field	Value
Functional Location	ZZ0##-01
Structure Indicator	ZZ##
Functional Location Category	T
Description	Production Line Z##
Maintenance Plant	1020
Cost Center	4110
Planning Plant	1020
Planner Group	Z##
Main WorkCtr	T-ME##
Work Center Plant	1010 ®

\* Create Equipment master record EQUI-## and save it. Use the following information:

Field	Value
Equipment	EQUI-##
Description	Drive Motor GR##
Equipment Category	T

\* Serialize the just created Equipment master record EQUI-## . Use the following data:

Field	Value
Material	T-PM8000
Serial Number	EQUI-##

\* Install Equipment EQUI-## at the Functional Location 00-01-ASS-02 .

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 4: Configure and create Technical Objects

This task evaluates your ability to structure and manage the physical and functional hierarchy of assets in SAP S/4HANA Asset Management.

Step 1: Create Functional Location Master Record

A Functional Location represents the area at which a maintenance task is to be performed.

\* Access the Transaction : Use transaction code IL01 (Create Functional Location).

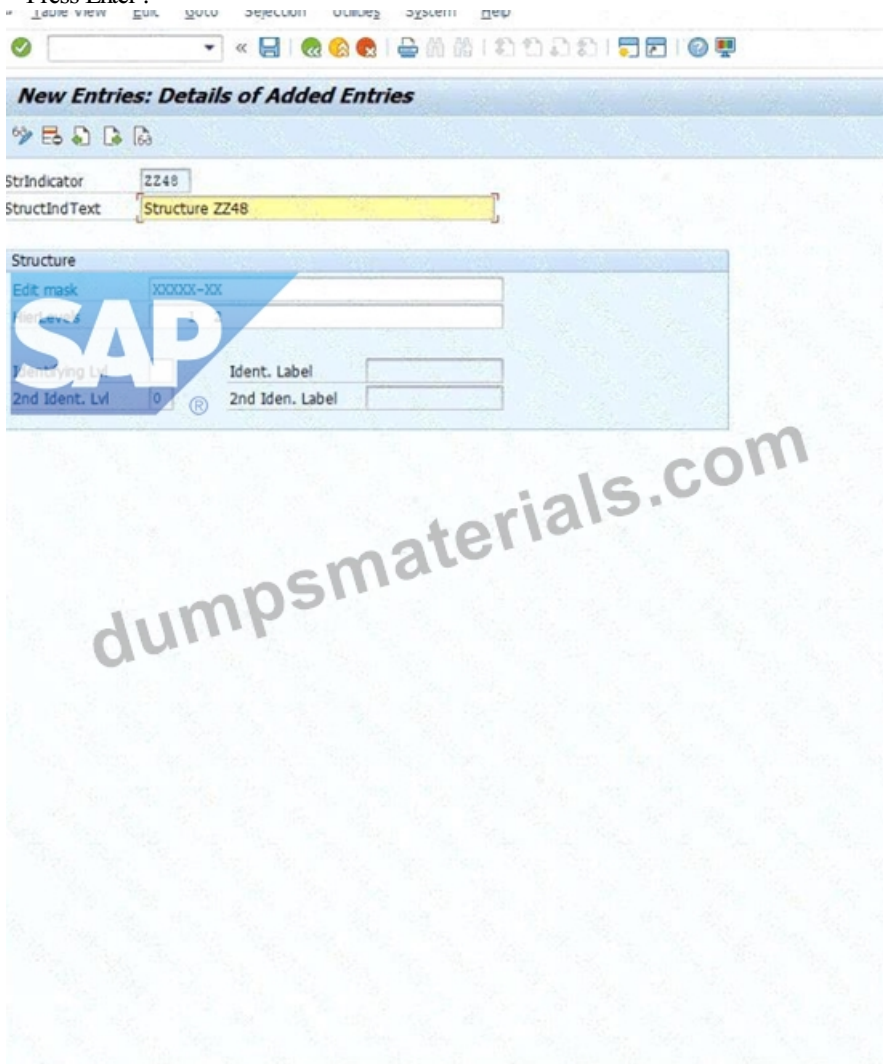

\* Enter Initial Data :

\* Functional Location : ZZ048-01.

\* Structure Indicator : ZZ48.

\* Functional Location Category : T.

\* Press Enter .

\* Enter General Data :

\* Description : Production Line Z48.

\* Enter Location and Organization Data :

\* Maintenance Plant : 1020.

\* Cost Center : 4110.

\* Planning Plant : 1020.

\* Planner Group : Z48.

\* Main WorkCtr : T-ME48.

\* Work Center Plant : 1010.

\* Save : Click the Save icon.

Explanation : By creating this record, you define a specific functional area within Plant 1020 where maintenance costs and history will be tracked for all equipment installed there.

**SAP**®

*dumpsmaterials.com*

Equipment created with the number EQUI-48

\* Enter General Data :

\* Description : Drive Motor GR48.

\* Save : Click the Save icon.

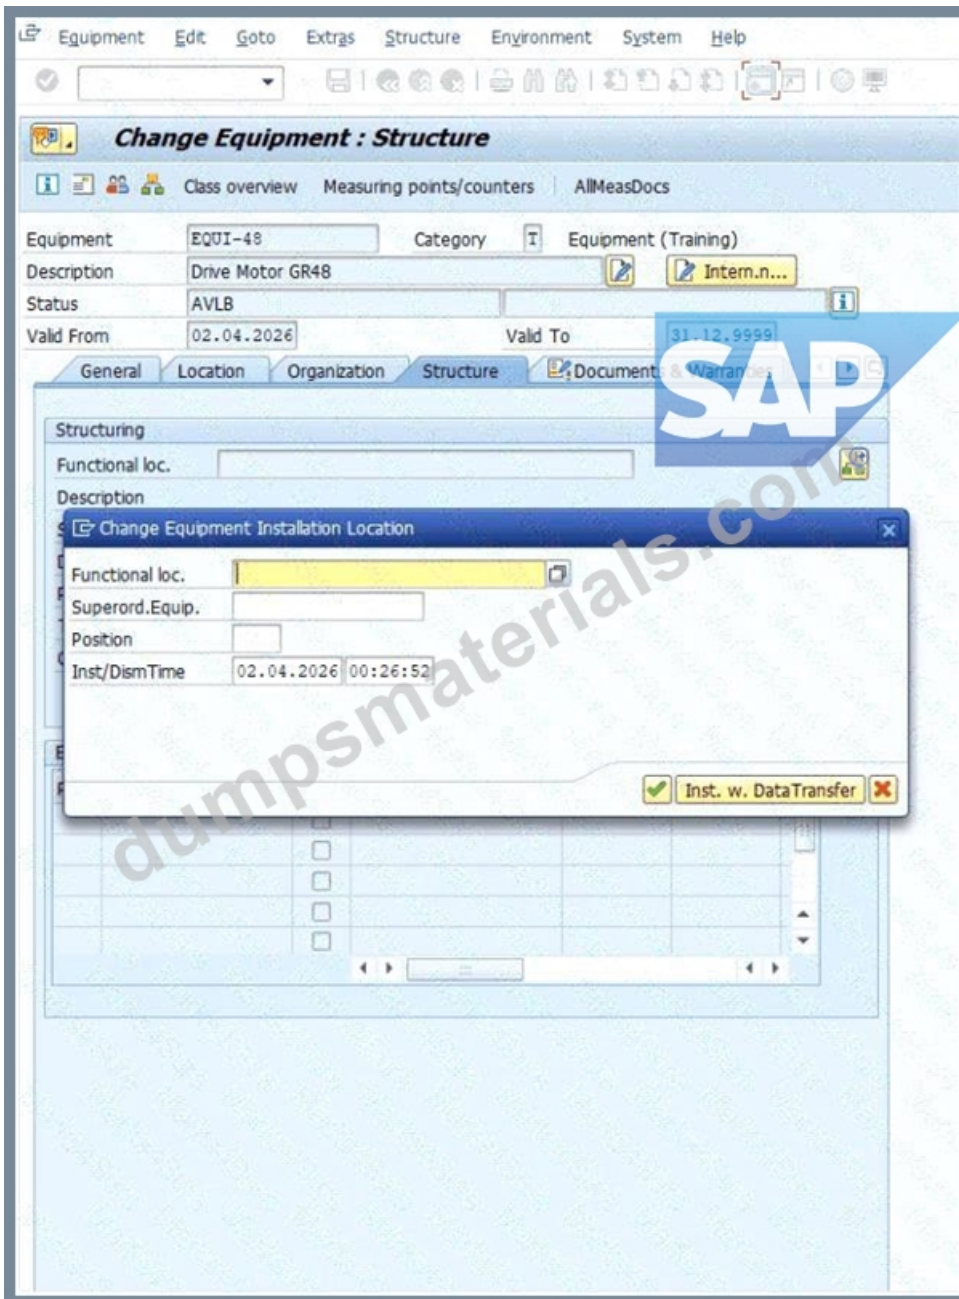

Explanation : This step creates a master record for a physical asset-a drive motor-allowing you to track its individual lifecycle, independent of where it is currently installed.

**Change Equipment : Initial Screen**

Equipment

**SAP** [sapmaterials.com](http://sapmaterials.com)

✔ Equipment EQUI-48 changed

### Step 3: Serialize the Equipment

Serialization links a piece of equipment to a specific material and unique serial number for inventory management and tracking.

- \* Access the Transaction : Use transaction code IE02 (Change Equipment) and enter EQUI-48.
- \* Navigate to Serial Data : Go to the SerData (Serial Data) tab.
- \* Enter Serialization Data :
- \* Material : T-PM8000.
- \* Serial Number : EQUI-48.
- \* Save : Click the Save icon.

Explanation : Linking the motor to Material T-PM8000 enables the system to track this specific asset as a serialized part, which is essential for warehouse movements and warranty tracking.

Telephone	040-987654	Fax	040-987655

**SAP**

#### Step 4: Install Equipment at a Functional Location

This establishes the relationship between the physical asset (Equipment) and the functional area where it is operating.

- \* Access the Transaction : Use transaction code IE02 (Change Equipment) for EQUI-48.
- \* Modify Installation Location :
- \* Click on the Structure tab.
- \* Find the FunctLoc field.
- \* Enter the location: 00-01-ASS-02.
- \* Save : Click the Save icon.

Explanation : This installation "plugs" your drive motor into the functional hierarchy at location 00-01-ASS-02. From this point forward, any maintenance performed on this motor will be automatically associated with that location's history.
