

SSE-Engineer Interactive Testing Engine | SSE-Engineer Latest Dump

P.S. Free 2025 Palo Alto Networks SSE-Engineer dumps are available on Google Drive shared by BraindumpQuiz: https://drive.google.com/open?id=1QICSgMdEGHSITkp_sj4vpgVFI78BSfr9

After purchasing the SSE-Engineer exam dumps from BraindumpQuiz, you will have access to three formats designed by BraindumpQuiz for the preparation of the Palo Alto Networks SSE-Engineer exam. These Palo Alto Networks Security Service Edge Engineer exam dumps formats will provide actual Palo Alto Networks SSE-Engineer PDF Questions to help you prepare for the Palo Alto Networks SSE-Engineer exam.

Palo Alto Networks SSE-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Prisma Access Troubleshooting: This section of the exam measures the skills of Technical Support Engineers and covers the monitoring and troubleshooting of Prisma Access environments. It includes the use of Prisma Access Activity Insights, real-time alerting, and a Command Center for visibility. Candidates are expected to troubleshoot connectivity issues for mobile users, remote networks, service connections, and ZTNA connectors. It also focuses on resolving traffic enforcement problems including security policies, HIP enforcement, User-ID mismatches, and split tunneling performance issues.
Topic 2	<ul style="list-style-type: none">Prisma Access Planning and Deployment: This section of the exam measures the skills of Network Security Engineers and covers foundational knowledge and deployment skills related to Prisma Access architecture. Candidates must understand key components such as security processing nodes, IP addressing, DNS, and compute locations. It evaluates routing mechanisms including routing preferences, backbone routing, and traffic steering. The section also focuses on deploying Prisma Access service infrastructure for mobile users using VPN clients or explicit proxy and configuring remote networks. Additional topics include enabling private application access using service connections, Colo-Connect, and ZTNA connectors, implementing identity authentication methods like SAML, Kerberos, and LDAP, and deploying Prisma Access Browser for secure user access.
Topic 3	<ul style="list-style-type: none">Prisma Access Administration and Operation: This section of the exam measures the skills of IT Operations Managers and focuses on managing Prisma Access using Panorama and Strata Cloud Manager. It tests knowledge of multitenancy, access control, configuration, and version management, and log reporting. Candidates should be familiar with releasing upgrades and leveraging SCM tools like Copilot. The section also evaluates the deployment of the Strata Logging Service and its integration with Panorama and SCM, log forwarding configurations, and best practice assessments to maintain security posture and compliance.

Topic 4	<ul style="list-style-type: none"> Prisma Access Services: This section of the exam measures the skills of Cloud Security Architects and covers advanced features within Prisma Access. Candidates are assessed on how to configure and implement enhancements like App Acceleration, traffic replication, IoT security, and privileged remote access. It also includes implementing SaaS security and setting up effective policies related to security, decryption, and QoS. The section further evaluates how to create and manage user-based policies using tools like the Cloud Identity Engine and User ID for proper identity mapping and authentication.

SSE-Engineer Latest Dump, SSE-Engineer Latest Exam Preparation

As we know, if you can obtain the job qualification SSE-Engineer certificate, which shows you have acquired many skills. In this way, your value is greatly increased in your company. Then sooner or later you will be promoted by your boss. Our SSE-Engineer Preparation exam really suits you best for your requirement. We have been considered to be the best friend for helping numerous of our customers successfully get their according SSE-Engineer certification.

Palo Alto Networks Security Service Edge Engineer Sample Questions (Q47-Q52):

NEW QUESTION # 47

What is the flow impact of updating the Cloud Services plugin on existing traffic flows in Prisma Access?

- A. They will be unaffected only if Panorama is deployed in high availability (HA) mode.
- B. They will be unaffected because the plugin upgrade is transparent to users.
- C. They will automatically terminate when the upgrade begins.
- D. They will experience latency during the plugin upgrade process.

Answer: B

Explanation:

Updating the Cloud Services plugin in Prisma Access does not disrupt existing traffic flows because the upgrade process is designed to be seamless and transparent. Prisma Access ensures high availability by maintaining active sessions and policies while applying the update in the background. This allows ongoing connections to continue without interruptions, minimizing impact on user experience.

NEW QUESTION # 48

Which two statements apply when a customer has a large branch office with employees who all arrive and log in within a five-minute time period? (Choose two.)

- A. Maximum number of TCP DNS retries is 3.
- B. DNS results are only cached for frequently used hostnames.
- C. DNS results are cached for 300 seconds.
- D. Maximum pending TCP DNS requests is 64.

Answer: A,D

Explanation:

When a large branch office experiences a high volume of employees logging in within a short time frame, the following apply:

* Maximum pending TCP DNS requests is 64- This means that Prisma Access can queue up to 64 pending DNS requests over TCP before dropping additional requests. If more requests are received simultaneously, some may fail or experience delays.

* Maximum number of TCP DNS retries is 3- If a DNS request fails over TCP, Prisma Access will attempt to retry the request up to three times before failing over to another method or returning an error.

NEW QUESTION # 49

Which two configurations must be enabled to allow App Acceleration for SaaS applications? (Choose two.)

- A. Forward Trust Certificate for the CA certificate
- B. QoS for user traffic
- C. Trusted Root CA for the CA certificate
- D. Acceleration agent for the client machines

Answer: A,C

Explanation:

To enable App Acceleration for SaaS applications in Prisma Access, the following configurations must be enabled: Trusted Root CA for the CA certificate ensures that Prisma Access can validate and trust the SaaS application's certificates, allowing seamless inspection and acceleration of traffic without security warnings.

Forward Trust Certificate for the CA certificate enables SSL decryption for SaaS applications, allowing Prisma Access to optimize traffic and apply acceleration techniques while maintaining security policies.

NEW QUESTION # 50

A company has four branch offices between Canada Central and Canada East which use the same IPSec termination node and have QoS configured with customized bandwidth per site. An engineer wants to onboard a new branch office on the same IPSec termination node.

What is the QoS behavior for the new branch office?

- A. Cannot be added to existing QoS configuration
- B. Automatically distributed to 20% for each site
- C. Unallocated until manually assigned
- D. Automatically distributed to 25% for each site

Answer: C

Explanation:

When onboarding a new branch office to an existing IPSec termination node in Prisma Access, the QoS bandwidth is not automatically assigned. Instead, the newly added branch remains unallocated until the administrator manually assigns bandwidth within the QoS configuration settings. This ensures that customized bandwidth per site remains intact and allows for fine-tuned traffic management based on business needs.

NEW QUESTION # 51

How can role-based access control (RBAC) for Prisma Access (Managed by Strata Cloud Manager) be used to grant each member of a security team full administrative access to manage the Security policy in a single tenant while restricting access to other tenants in a multitenant deployment?

- A. Add the team to the Parent Tenant, select Prisma Access & NGFW Configuration, and set the role to Security Administrator.
- B. Add the team to the Child Tenant, select All Apps & Services, and set the role to Security Administrator.
- C. Add the team to the Child Tenant, select Prisma Access & NGFW Configuration, and set the role to Security Administrator.
- D. Add the team to the Parent Tenant, select the Prisma Access Configuration Scope, and set the role to Security Administrator.

Answer: C

Explanation:

In a multitenant deployment, access control must be configured at the Child Tenant level to ensure that security administrators have full control over Security policy only within their assigned tenant while restricting access to other tenants. By selecting Prisma Access & NGFW Configuration, the assigned users gain full administrative access only for security policy management within the designated tenant, aligning with RBAC best practices for controlled access in Prisma Access Managed by Strata Cloud Manager.

NEW QUESTION # 52

.....

Our products are compiled by experts from various industries and they are based on the true problems of the past years and the

development trend of the industry. What's more, according to the development of the time, we will send the updated materials of SSE-Engineer test prep to the customers soon if we update the products. Under the guidance of our study materials, you can gain unexpected knowledge. Finally, you will pass the exam and get a SSE-Engineer Certification. Customers can learn according to their actual situation and it is flexible. Next I will introduce the advantages of our SSE-Engineer test prep so that you can enjoy our products.
