We have authoritative production team made up by thousands of experts helping you get hang of our Data-Architect study question and enjoy the high quality study experience. We will update the content of Data-Architect test guide from time to time according to recent changes of examination outline and current policies. Besides, our Data-Architect Exam Questions can help you optimize your learning method by simplifying obscure concepts so that you can master better. One more to mention, with our Data-Architect test guide, there is no doubt that you can cut down your preparing time in 20-30 hours of practice before you take the exam.

Salesforce Data-Architect certification is designed for professionals who want to demonstrate their expertise in designing, developing, and implementing data solutions using the Salesforce platform. It is intended for individuals who are looking to validate their knowledge of Salesforce data architecture and design principles. Salesforce Certified Data Architect certification is ideal for data architects, data engineers, and data analysts who work with Salesforce data and want to take their skills to the next level.

Achieving the Salesforce Data-Architect certification demonstrates your expertise in designing and implementing data architecture solutions that meet the needs of the business. It also demonstrates your ability to ensure data quality, data security, and compliance with data governance policies. Salesforce Certified Data Architect certification is highly regarded in the Salesforce ecosystem and can enhance your career opportunities and earning potential. By passing the Salesforce Data-Architect Certification Exam, you join an elite group of certified professionals who are recognized for their expertise in Salesforce data architecture.

Salesforce Certified Data Architect certification exam measures a candidate's expertise in designing and managing data architecture, data modeling, and data governance within the Salesforce platform. It also evaluates a candidate's ability to design and implement complex data integrations with external systems.

Here's a Quick and Proven Way to Pass Salesforce Data-Architect Certification exam

Do you want to prove your ability in IT field? Do you want to get more recognition and employment opportunities? So Data-Architect exam certification will be an important evidence to prove yourself. Almost all those who are working in the IT field know how important to get Data-Architect exam certification. As we know, everyone's energy is limited, if you want to pass the important Data-Architect Certification Exam in such short time, the exam software provided by our DumpsTests will be a good helper for your preparation for the exam. The complete questions and exam software created in accordance with the laws of the people's memory will help you succeed in the Data-Architect exam.

Salesforce Certified Data Architect Sample Questions (Q219-Q224):

NEW QUESTION # 219

A health care provider wishes to use salesforce to track patient care. The following actions are in Salesforce

1. Payment Providers: Orgas who pay for the care 2 patients.
 2. Doctors: They provide care plan for patients and need to support multiple patients, they are provided access to patient information.
 3. Patients: They are individuals who need care.
- A data architect needs to map the actor to Sf objects. What should be the optimal selection by the data architect?

- A. Patients as Accounts, Payment providers as Accounts, & Doctors as Person Accounts
- B. Patients as Person Accounts, Payment providers as Accounts, & Doctors as Contacts
- C. Patients as Contacts, Payment providers as Accounts, & Doctors as Accounts
- **D. Patients as Person Accounts, Payment providers as Accounts, & Doctors as Person Account**

Answer: D

Explanation:

Patients as Person Accounts, Payment providers as Accounts, & Doctors as Person Accounts is the optimal selection by the data architect to map the actor to Salesforce objects. This is because Person Accounts are a special type of accounts that can store both business and personal information for individual customers. Payment providers are organizations that pay for the care of patients, so they can be modeled as Accounts. Doctors are also individuals who provide care plans for patients and need access to patient information, so they can also be modeled as Person Accounts.

NEW QUESTION # 220

Universal Containers (UC) uses Salesforce for tracking opportunities (Opportunity). UC uses an internal ERP system for tracking deliveries and invoicing. The ERP system supports SOAP API and OData for bi-directional integration between Salesforce and the ERP system. UC has about one million opportunities. For each opportunity, UC sends 12 invoices, one per month. UC sales reps have requirements to view current invoice status and invoice amount from the opportunity page. When creating an object to model invoices, what should the architect recommend, considering performance and data storage space?

- A. Create a custom object Invoice_c with a master-detail relationship with Opportunity.
- B. Use Streaming API to get the current status from the ERP and display on the Opportunity page.
- **C. Create an external object Invoice_x with a Lookup relationship with Opportunity.**
- D. Create a custom object Invoice_c with a Lookup relationship with Opportunity.

Answer: C

Explanation:

Creating an external object Invoice_x with a Lookup relationship with Opportunity is the best option for modeling invoices, considering performance and data storage space. An external object allows the data to be stored in the ERP system and accessed via OData in Salesforce. This reduces the data storage consumption in Salesforce and improves the performance of queries and reports. A Lookup relationship allows the sales reps to view the invoice status and amount from the opportunity page. The other options would either consume more data storage space, require additional customization, or not provide real-time data access.

NEW QUESTION # 221

Universal Container (US) is replacing a home grown CRM solution with Salesforce, UC has decided to migrate operational (Open and active) records to Salesforce, while keeping historical records in legacy system, UC would like historical records to be available in Salesforce on an as needed basis.

Which solution should a data architect recommend to meet business requirement?

- A. Leverage real-time integration to pull records into Salesforce.
- **B. Leverage mashup to display historical records in Salesforce.**
- C. Build a chair solution to go the legacy system and display records.
- D. Bring all data Salesforce, and delete it after a year.

Answer: B

NEW QUESTION # 222

Universal Containers (UC) is concerned about the accuracy of their Customer information in Salesforce. They have recently created an enterprise-wide trusted source MDM for Customer data which they have certified to be accurate. UC has over 20 million unique customer records in the trusted source and Salesforce. What should an Architect recommend to ensure the data in Salesforce is

identical to the MDM?

- A. Load the Trusted Source data into Salesforce and run an Apex Batch job to find difference.
- **B. Use an AppExchange package for Data Quality to match Salesforce data against the Trusted source.**
- C. Extract the Salesforce data into Excel and manually compare this against the trusted source.
- D. Leave the data in Salesforce alone and assume that it will auto-correct itself over time.

Answer: B

NEW QUESTION # 223

Cloud Kicks stores Invoice records in a custom object. Invoice records are being sent to the Accounting department with missing States and incorrectly formatted Postal Codes.

Which two actions should Cloud Kicks take to improve data quality? (Choose two.)

- A. Write an Apex Trigger to require all fields to be populated.
- **B. Utilize a Validation Rule with a REGEX operator on Postal Code.**
- **C. Utilize a Validation Rule with a CONTAINS operator on address fields.**
- D. Change each address field to require on the Page Layout.

Answer: B,C

Explanation:

Utilizing a Validation Rule with a REGEX operator on Postal Code and utilizing a Validation Rule with a CONTAINS operator on address fields are two actions that Cloud Kicks should take to improve data quality for their Invoice records. A Validation Rule with a REGEX operator can check if the Postal Code field matches a specific pattern or format, such as a five-digit number or a combination of letters and numbers. A Validation Rule with a CONTAINS operator can check if the address fields contain certain values, such as valid state abbreviations or country names. These Validation Rules can prevent users from saving invalid or incomplete data and display error messages to guide them to correct the data. The other options are not effective or recommended for improving data quality, as they would either require additional customization, not enforce data standards, or not address the specific issues of missing states and incorrectly formatted postal codes

NEW QUESTION # 224

.....

As long as what you are looking for is high quality and accuracy practice materials, then our Data-Architect training guide is your indispensable choices. We are sufficiently definite of the accuracy and authority of our Data-Architect practice materials. So lousy materials will lead you end up in failure. They cannot be trusted unlike our Data-Architect Study Materials. Come together and our materials will serve as a doable way to strengthen your ability to solve questions on your way to success.
