How Peoplecert is so Confident in its Peoplecert DevOps-Foundation Exam Questions?

Our Peoplecert DevOps-Foundation exam questions have gained wide popularity among candidates. Almost all customers are willing to introduce our DevOps-Foundation practice quiz to their classmates and friends. And sometimes, they may buy our exam products together. After they have tried our study materials, most of them have successfully passed the Peoplecert DevOps-Foundation Exam and made a lot of money.

Peoplecert PeopleCert DevOps Foundation v3.6 Exam Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which statement is NOT TRUE?

- A. Continuous Integration requires developers commit code to trunk at least daily
- B. Waterfall approaches can take advantage of continuous integration and test-driven development practices
- C. Continuous Delivery ensures software is always in a releasable state
- **D. Continuous Deployment requires a manual push button**

Answer: D

Explanation:

Let's clarify what these terms mean in DevOps:

* Continuous Integration (CI): Developers integrate code into a shared repository frequently (ideally daily), with each integration automatically verified by tests.

* Continuous Delivery (CD): Ensures software is always in a releasable state. Every change can be deployed to production, but the deployment itself may be a manual decision.

* Continuous Deployment: Every change that passes automated tests is automatically deployed to production, without manual intervention.

Why is D ("Continuous Deployment requires a manual push button") NOT TRUE?

Because Continuous Deployment is about no manual intervention—once code passes all tests, it's automatically pushed live. Manual deployment is a feature of Continuous Delivery, not Continuous Deployment.

Extract-style reference:

"Continuous Deployment means that every change goes through the pipeline and is automatically put into production, resulting in many production deployments every day."

-Accelerate: The Science of Lean Software and DevOps, Jez Humble & Nicole Forsgren DevOps Foundation v3.6 distinguishes between Continuous Delivery (manual trigger) and Continuous Deployment (fully automated).

NEW QUESTION # 25

Which of the following are benefits of automation?

- **A. Higher quality and faster recovery**
- B. More frequent and turbulent releases
- C. Decreased security and risk mitigation
- D. Fewer errors and slower lead time

Answer: A

NEW QUESTION # 26

An organization is struggling to reduce delays when launching new projects.

Which of the following automation practices could help reduce these delays?

- A. Treating infrastructure as code
- B. Test-driven development
- **C. All of the Above**
- D. Automated continuous integration and builds

Answer: C

Explanation:

Reducing delays in launching projects requires eliminating manual, time-consuming tasks in the delivery process:

* A: Continuous Integration (CI) with automated builds speeds up integration and reduces defects.

* B: Test-Driven Development (TDD) ensures quality from the start, reducing rework and post-development bug fixing.
* C: Infrastructure as Code (IaC) enables rapid, repeatable provisioning of environments, avoiding manual setup delays.
All three practices contribute to faster, more reliable project starts. As PeopleCert notes, combining these practices creates a strong automation foundation, enabling organizations to move from idea to delivery quickly.
Therefore, D-All of the above-is correct.

The DevOps Handbook- CI, TDD, and IaC Principles

NEW QUESTION # 27

Which of the following is NOT a characteristic of DevOps?

- A. Working towards a common goal
- B. Ensuring overall organizational success
- C. Fast flow of unplanned work into production
- D. World-class stability, reliability, availability and security

Answer: C

Explanation:

A fast flow of unplanned work into production is not a characteristic of DevOps. In fact, DevOps practices strive to minimize unplanned work (like emergency changes or outages) through automation, testing, collaboration, and rigorous change control. The other options-ensuring organizational success, working toward a common goal, and world-class stability/reliability-are all key DevOps characteristics.

Reference: DevOps Foundation v3.6 syllabus section 1.4; State of DevOps Report.

NEW QUESTION # 28

What is NOT a type of IT work?

- A. Unplanned work
- B. Manufacturing
- C. Planned work
- D. Business projects

Answer: B

Explanation:

Manufacturing is not a type of IT work in DevOps.

DevOps classifies IT work as:

* Business projects: New value-creating work.

* Planned work: Routine, repeatable tasks (maintenance, upgrades).

* Unplanned work: Incidents, emergencies, support.

Extract-style reference:

"IT work includes business projects, planned work, and unplanned work. Manufacturing is an analogy for flow, but not a category of IT work itself."

-The Phoenix Project

PeopleCert DevOps Foundation v3.6: Recognizes these three categories to manage and improve IT workloads.

NEW QUESTION # 29

.....

Remember that this is a crucial part of your career, and you must keep pace with the changing time to achieve something substantial in terms of a certification or a degree.
