You no longer have to buy information for each institution for an ISA-IEC-62443 exam, nor do you need to spend time comparing which institution's data is better. ISA-IEC-62443 provides you with the most comprehensive learning materials. Our company employs the most qualified experts who hold a variety of information. At the same time, they use years of experience to create the most scientific ISA-IEC-62443 Learning Engine.

If you still spend a lot of time studying and waiting for ISA-IEC-62443 qualification examination, then you need our ISA-IEC-62443 test prep, which can help solve all of the above problems. I can guarantee that our study materials will be your best choice. Our ISA-IEC-62443 valid practice questions have three different versions, including the PDF version, the software version and the online version, to meet the different needs, our ISA-IEC-62443 Study Materials have many advantages, and you can free download the demo of our ISA-IEC-62443 exam questions to have a check.

Knowledge makes prominent contributions to human civilization and progress. In the 21st century, the rate of unemployment is increasing greatly. Many jobs are replaced by intelligent machines. You must learn practical knowledge such as our ISA-IEC-62443 actual test guide, which cannot be substituted by artificial intelligence. Now, our ISA-IEC-62443 learning prep can meet your demands. You will absorb the most useful knowledge with the assistance of our study materials. The ISA-IEC-62443 certificate is valuable in the job market. But you need professional guidance to pass the exam. For instance, our ISA-IEC-62443 exam questions fully accords with your requirements.

## ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q102-Q107):

### NEW QUESTION # 102

How many element groups are in the "Addressing Risk" CSMS category?

Available Choices (select all choices that are correct)

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: D**

Explanation:

The "Addressing Risk" CSMS category consists of three element groups: Security Policy, Organization and Awareness; Selected Security Countermeasures; and Implementation of Security Program<sup>1</sup>. These element groups cover the aspects of defining the security objectives, roles and responsibilities, policies and procedures, awareness and training, security countermeasures selection and implementation, and security program execution and maintenance<sup>1</sup>. The "Addressing Risk" CSMS category aims to reduce the security risk to an acceptable level by applying appropriate security measures to the system under consideration (SuC)<sup>1</sup>. References:

#### NEW QUESTION # 103

Which protocol is commonly used for managing the security of message transmission on the Internet via web browsers?

- **A. TLS**
- B. IPsec
- C. L2TP
- D. PPTP

**Answer: A**

Explanation:

Transport Layer Security (TLS) is the standard protocol for securing web communications, including HTTP over TLS (HTTPS) in web browsers. TLS provides encryption, authentication, and data integrity, and has replaced SSL as the primary means of securing browser-based communications.

Reference: ISA/IEC 62443-3-3:2013, Section 4.2.3.7 ("Use of TLS for secure communication"); NIST SP 800-52 Rev. 2.

#### NEW QUESTION # 104

What are three possible entry points (pathways) that could be used for launching a cyber attack?

Available Choices (select all choices that are correct)

- A. LAN, WAN, and hard drive
- B. LAN, portable media, and hard drives
- **C. LAN, portable media, and wireless**
- D. LAN, power source, and wireless OD.

**Answer: C**

Explanation:

A cyber attack is an attempt to compromise the confidentiality, integrity, or availability of a computer system or network by exploiting its vulnerabilities. A cyber attack can be launched from various entry points, which are the pathways that allow an attacker to access a target system or network. According to the ISA/IEC

62443-3-2 standard, which defines a method for conducting a security risk assessment for industrial automation and control systems (IACS), some of the possible entry points for a cyber attack are:

\* LAN: A local area network (LAN) is a network that connects devices within a limited geographic area, such as a building or a campus. A LAN can be an entry point for a cyber attack if an attacker gains physical or logical access to the network devices, such as switches, routers, firewalls, or servers. An attacker can use various techniques to access a LAN, such as network scanning, spoofing, sniffing, or hijacking. An attacker can also exploit vulnerabilities in the network protocols, services, or applications that run on the LAN. A cyber attack on a LAN can affect the communication and operation of the devices and systems connected to the network, such as IACS.

\* Portable media: Portable media are removable storage devices that can be used to transfer data between different systems or devices, such as USB flash drives, CDs, DVDs, or external hard drives. Portable media can be an entry point for a cyber attack if an attacker uses them to introduce malicious code or data into a target system or device. An attacker can use various techniques to infect portable media, such as autorun, social engineering, or physical tampering. An attacker can also exploit vulnerabilities in the operating systems, drivers, or applications that interact with portable media. A cyber attack using portable media can affect the functionality and security of the systems or devices that use them, such as IACS.

\* Wireless: Wireless is a technology that enables communication and data transmission without physical wires or cables, such as Wi-Fi, Bluetooth, or cellular networks. Wireless can be an entry point for a cyber attack if an attacker intercepts, modifies, or disrupts

the wireless signals or data. An attacker can use various techniques to access wireless networks or devices, such as cracking, jamming, or eavesdropping. An attacker can also exploit vulnerabilities in the wireless protocols, standards, or encryption methods. A cyber attack on wireless can affect the availability and reliability of the wireless communication and data transmission, such as IACS.

Therefore, LAN, portable media, and wireless are three possible entry points that could be used for launching a cyber attack.

#### NEW QUESTION # 105

Security Levels (SLs) are broken down into which three types?

Available Choices (select all choices that are correct)

- A. SL-1, SL-2, and SL-3
- **B. Target.capability, and achieved**
- C. Target.capacity, and achieved
- D. Target.capability, and availability

**Answer: B**

Explanation:

Security Levels (SLs) are a way of expressing the security performance of an industrial automation and control system (IACS) or its components. SLs are broken down into three types: target, capability, and achieved<sup>1</sup>.

\* Target SL is the level of security performance that is required for a system or component to protect against a specific threat scenario. The target SL is determined by conducting a risk assessment that considers the likelihood and impact of potential security incidents<sup>1</sup>.

\* Capability SL is the level of security performance that a system or component can provide based on its design and implementation. The capability SL is determined by evaluating the security functions and features of the system or component against a set of security requirements<sup>1</sup>.

\* Achieved SL is the level of security performance that a system or component actually provides in its operational environment. The achieved SL is determined by verifying that the system or component is properly installed, configured, maintained, and monitored<sup>1</sup>.
