UiPath Automation Business Analyst Associate Exam (2023.10) Sample Questions (Q65-Q70):

NEW QUESTION # 65
What document outlines the tests to be performed and logistics for end-user testing after development?

- A. Application Tracker
- B. Solution Design Document (SDD)
- C. User Acceptance Testing (UAT) Plan
- D. Project Readiness Checklist

Answer: C

Explanation:
The User Acceptance Testing (UAT) Plan is the document that details how end-user testing will occur once development is complete.
It defines the test cases, success criteria, testing timelines, and responsible parties from both the Implementation and Client Teams.

This document is essential for organizing the UAT phase, ensuring that all involved stakeholders are aware of what will be tested, how issues will be logged, and who is responsible for resolving them. It also outlines the criteria that must be met for the automation to be considered acceptable and ready for production.

The UAT Plan supports a structured and transparent testing process, minimizing the risk of miscommunication and ensuring that the delivered solution meets business expectations. It helps validate that the automation aligns with the agreed-upon requirements, business rules, and user needs captured during the earlier stages of the project.

NEW QUESTION # 66

What does Automation Implementation Methodology ensure?

- A. Consistent quality, faster and more reliable implementations, and quicker process handovers
- B. Independent project execution with minimal team coordination
- C. Inconsistent delivery quality with flexible tools
- D. Increased cost of automation with flexible timelines

Answer: A

Explanation:

The UiPath Automation Implementation Methodology ensures consistent quality, faster and more reliable implementations, and quicker process handovers by establishing a structured and well-defined approach to automation projects. This methodology includes stages from kickoff to project closure, each involving specific stakeholders, defined deliverables, and quality assurance measures.

The methodology helps organizations deliver automation projects in a repeatable and predictable way, reducing variability in outcomes and enhancing stakeholder satisfaction. It incorporates best practices that align the Client Team and the Implementation Team, ensuring both sides have clear expectations and roles. It also facilitates early identification of risks, effective communication, and streamlined deployment, which leads to faster turnarounds.

Moreover, by following a proven framework, the implementation team can avoid redundant efforts, minimize rework, and focus on value creation. This ultimately leads to more scalable and maintainable automation solutions, reduced time-to-value, and smoother transitions from development to production.

NEW QUESTION # 67

What is the informal starting point of a UiPath automation project?

- A. Deployment Readiness
- B. Access Provisioning
- C. Automation Opportunity with Good Potential
- D. Kickoff Meeting

Answer: C

Explanation:

The informal start of a UiPath automation project begins when there is an automation opportunity with good potential. This is the moment when a business stakeholder, manager, or automation champion identifies a process that appears suitable for automation due to its repetitiveness, volume, and potential return on investment.

Although not an official stage in the UiPath Automation Implementation Methodology, recognizing an automation opportunity is a critical pre-project activity. It typically triggers further investigation during the Discovery or Business Case and Technical Validation stages, where the process is formally evaluated for its feasibility and value.

Identifying such opportunities is essential to maintaining a healthy automation pipeline. The earlier the opportunity is spotted, the sooner it can be assessed and moved into the structured implementation process, ultimately contributing to continuous automation at scale within an organization.

NEW QUESTION # 68

In the Kickoff stage, which of the following must be defined and communicated?

- A. Post-deployment SLA
- B. Only UAT test cases
- C. Client team vacation schedules
- D. Access to Studio and Orchestrator

Answer: D

Explanation:
In theKickoff stage, access to key platforms likeUiPath StudioandOrchestratormust beclearly defined and communicated. Early access planning is essential to avoid development delays and ensure that developers, robots, and testers can interact with the required environments and systems.
In many projects, delays occur because access provisioning is not handled upfront. That's why UiPath emphasizes capturing these details early in theApplication Tracker, with input from the Solution Architect and Infrastructure Engineer.
By discussing access needs during Kickoff, teams can involve theClient ITteam early, prepare credentials and environments, and prevent blockers during later stages such as development and testing.

NEW QUESTION # 69
What is the primary purpose of the Process Assessment Tool in UiPath?

- A. Tracking project defects
- B. Managing robot workloads
- C. Determining process fit and feasibility for automation
- D. Designing automated workflows

Answer: C

Explanation:
TheProcess Assessment Toolin UiPath is designed toevaluate whether a business process is a good fit for automation. It assists business analysts and other stakeholders in determining both thefeasibilityand thevalue of automating a specific process.
The tool assesses various dimensions such as process complexity, frequency, standardization, exception handling, and potential business impact. Based on this evaluation, the tool generates a score or categorization that helps prioritize processes for automation.
This helps organizations invest their automation efforts in the right areas - those that offer high ROI and are technically viable. It also enablesstrategic decision-makingin the Discover phase, where automation candidates are initially shortlisted and analyzed.
