

C_ABAPD_2507 Study Test - Official C_ABAPD_2507 Practice Test

P.S. Free & New C_ABAPD_2507 dumps are available on Google Drive shared by TestPassKing: <https://drive.google.com/open?id=1FpXrz8ogLH8sP2L3ZHk1MjJT7kI9jD5X>

Everyone wants to succeed. As a worker in IT industry, you know how important the C_ABAPD_2507 exam certification is for your career success. There are more and more people to participate in C_ABAPD_2507 certification exam, and how to win in the increasingly competitive situation? To chose the right hand is the key. Our TestPassKing team has studies the C_ABAPD_2507 Certification Exam for years so that we have in-depth knowledge of the test. We believe that you must be succeed in the exam with the help of C_ABAPD_2507 test software provided by our TestPassKing.

SAP C_ABAPD_2507 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> SAP Clean Core Extensibility and ABAP Cloud: This section of the exam measures skills of SAP Application Programmers and covers the clean core principles and extensibility options within SAP BTP. It also includes cloud-native ABAP development practices, emphasizing the creation of upgrade-stable and maintainable extensions aligned with SAP’s cloud strategy.
Topic 2	<ul style="list-style-type: none"> ABAP RESTful Application Programming Model: This section of the exam measures skills of SAP Application Programmers and covers the fundamentals of the ABAP RESTful Application Programming Model (RAP). It includes topics such as behavior definitions, service binding, and the use of managed and unmanaged scenarios. The focus is on building modern, scalable, and cloud-ready applications using RAP.
Topic 3	<ul style="list-style-type: none"> ABAP Core Data Services and Data Modeling: This section of the exam measures skills of SAP ABAP Developers and covers the creation, definition, and use of Core Data Services (CDS) views for data modeling within SAP environments. Candidates are expected to understand annotations, data definitions, and the role of CDS in enabling advanced data processing and integration across SAP systems.
Topic 4	<ul style="list-style-type: none"> Object-Oriented Design: This section of the exam measures skills of SAP ABAP Developers and covers the basics of object-oriented programming in ABAP. It includes concepts such as classes, interfaces, inheritance, polymorphism, and encapsulation, all of which are necessary for building robust and scalable ABAP applications.

Official C_ABAPD_2507 Practice Test | C_ABAPD_2507 Exams Collection

We will free provide you part of the exercises of SAP Certification C_ABAPD_2507 Exam on the Internet to let you try to test our

product's quality. After your trail you will find TestPassKing's exercises is the most comprehensive one and is what you want to.

SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q54-Q59):

NEW QUESTION # 54

In class ZCL_CLASS_A, you use the statement DATA var TYPE ***

What may stand in place of ***? Note: There are 2 correct answers to this question.

- A. The name of a type defined privately in another class
- B. The name of a data element from the ABAP Dictionary
- C. The name of a type defined privately in class ZCL_CLASS_A
- D. The name of a domain from the ABAP Dictionary

Answer: B,D

Explanation:

In class ZCL_CLASS_A, you use the statement DATA var TYPE *** to declare a data object named var with a data type specified by ***. The data type can be any of the following1:

A predefined ABAP type, such as i, f, c, string, xstring, and so on.

A data element from the ABAP Dictionary, such as matrnr, carrid, bukrs, and so on. A data element defines the semantic and technical attributes of a data field, such as the domain, the length, the data type, the description, and the value range2.

A domain from the ABAP Dictionary, such as matrnr_d, carrid_d, bukrs_d, and so on. A domain defines the technical attributes of a data field, such as the data type, the length, the output length, the number of decimal places, and the value range3.

A type defined globally in a class, an interface, or a type pool, such as zcl_class_b=>type_a, zif_interface_c=>type_b, ztype_pool_d=>type_c, and so on. A global type is a type that is defined in a global repository object and can be used in any program or class4.

A type defined locally in the current class, such as type_a, type_b, type_c, and so on. A local type is a type that is defined in the declaration part of a class and can only be used within the class5.

Therefore, the possible values for *** are B. the name of a data element from the ABAP Dictionary and D. the name of a domain from the ABAP Dictionary. The other options are not valid because:

A. The name of a type defined privately in class ZCL_CLASS_A is a local type and cannot be used with the DATA statement. A local type can only be used with the TYPES statement5.

C. The name of a type defined privately in another class is a private type and cannot be accessed from outside the class. A private type can only be used within the class that defines it.

NEW QUESTION # 55

When you work with a test class, you can set up some prerequisites before the actual testing.

In which sequence will the following fixtures be called by the test environment?

□

Answer:

Explanation:

□ Explanation:

class_setup()

setup()

teardown()

class_teardown()

ABAP Unit Test framework defines a fixed sequence for test fixture methods to ensure reliable test execution and cleanup:

* class_setup():Called once before any tests in the test class are run. Used to prepare global test data or setup that applies to all tests.

* setup():Called before each individual test method to prepare local test data or preconditions.

* teardown():Called after each individual test method to clean up what was done in setup().

* class_teardown():Called once after all tests have been executed to clean up class-level resources.

This sequence supports isolation and repeatability of test executions, ensuring that one test's result does not influence another's.

NEW QUESTION # 56

Which RESTful Application Programming object can be used to organize the display of fields in an app?

- A. Projection view
- B. Service definition
- C. Data model view
- **D. Metadata extension**

Answer: D

Explanation:

A metadata extension is a RESTful Application Programming object that can be used to organize the display of fields in an app. A metadata extension is a CDS view that annotates another CDS view with UI annotations, such as labels, icons, or facets. These annotations define how the data should be presented in the app, such as which fields should be shown on the object page, which fields should be editable, or which fields should be used for filtering or sorting. A metadata extension can also be used to add custom actions or validations to the app¹². Reference: 1: Refine the Object Page with Annotations | SAP Tutorials 2: ABAP RAP : Enabling custom actions with a dialog for additional input fields | SAP Blogs

NEW QUESTION # 57

While debugging an ABAP program, you want the program to stop whenever the value of a variable change. Which of the following do you use?

- A. Conditional breakpoint
- **B. breakpoint Watchpoint**
- C. Exception

Answer: B

NEW QUESTION # 58

In a RAP business object, where is the validation implementation code contained?

- A. Global class
- **B. Local class**
- C. Subroutine
- D. Function

Answer: B

Explanation:

Comprehensive and Detailed Explanation from Exact Extract:

* In RAP, validations, determinations, and actions are implemented inside the local handler class (lhc_...) of the behavior pool.

* Global classes are not used directly for RAP BO logic, only for reusable utilities.

* Functions or subroutines are not cloud-compliant for RAP implementation.

Thus, validation code always resides in the local handler class inside the RAP behavior pool.

Study Guide Reference: RAP Development Guide - Validations in Behavior Implementation.

NEW QUESTION # 59

.....

Our C_ABAPD_2507 learning question can provide you with a comprehensive service beyond your imagination. C_ABAPD_2507 exam guide has a first-class service team to provide you with 24-hour efficient online services. Our team includes industry experts & professional personnel and after-sales service personnel, etc. Industry experts hired by C_ABAPD_2507 Exam Guide helps you to formulate a perfect learning system, and to predict the direction of the exam, and make your learning easy and efficient. Our staff can help you solve the problems that C_ABAPD_2507 test prep has in the process of installation and download.
