The Designing and Implementing Microsoft DevOps Solutions certification exam consists of a combination of multiple-choice questions and performance-based scenarios that test the knowledge and skills of the candidates. AZ-400 Exam is challenging and requires a thorough understanding of DevOps practices and Microsoft Azure. However, passing the exam provides IT professionals with a valuable certification that demonstrates their expertise in DevOps and Microsoft Azure.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q213-Q218):

NEW QUESTION # 213
You manage the Git repository for a large enterprise application.
During the development of the application, you use a file named Config.json.
You need to prevent Config.json from being committed to the source control whenever changes to the application are committed.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:
Explanation
Step 1: Delete and recreate the repository.
Step 2: Add Config.json to the .gitignore file
Each line in the .gitignore excludes a file or set of files that match a pattern.
Example:
ignore a single file
Config.json
Step 3: Run the git add .gitignore command
At the initial commit we want basically move from Untracked to Staged, for staging we have to indicate which file we want to move or specify a pattern, as example:

https://geohernandez.net/how-to-add-an-existing-repository-into-azure-devops-repo-with-git/

NEW QUESTION # 214
Note: This section contains one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem. You must determine whether the solution meets the stated goals.
More than one solution in the set might solve the problem. It is also possible that none of the solutions in the set solve the problem.
After you answer a question in this section, you will NOT be able to return. As a result, these questions do not appear on the Review Screen.
You have an on-premises web server named Server1.
You need to ensure that you can build .NET apps and deploy the apps to Server1 by using Azure Pipelines.
Solution; You deploy Managed DevOps Pools and select the Azure Pipelines - Windows Server 2022 image.
Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION # 215
You use Get for source control.
You need to optimize the performance of a repository. The solution must meet the following requirements:
* Permanently remove all items referenced only in the ref log.
* Remove history that is NOT in any current branch.
How should you complete the command? To answer, select the appropriate options in the answer area.

Answer:

Explanation:
Explanation:

NEW QUESTION # 216

You have a project in Azure DevOps named Contoso App that contains pipelines in Azure Pipelines for GitHub repositories. You need to ensure that developers receive Microsoft Teams notifications when there are failures in a pipeline of Contoso App. What should you run in Teams? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation
Box 1: subscribe
To start monitoring all pipelines in a project, use the following command inside a channel:
@azure pipelines subscribe [project url]
Box 2: https://dev.azure.com/contoso/contoso-app/
Subscribe to a pipeline or all pipelines in a project to receive notifications:
@azure pipelines subscribe [pipeline url/ project url]

NEW QUESTION # 217

Your company plans to deploy an application to the following endpoints:
* Ten virtual machines hosted in Azure
* Ten virtual machines hosted in an on-premises data center environment
All the virtual machines have the Azure Pipelines agent.
You need to implement a release strategy for deploying the application to the endpoints.
What should you recommend using to deploy the application to the endpoints? To answer, drag the appropriate components to the correct endpoints. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation:
Box 1: A deployment group
When authoring an Azure Pipelines or TFS Release pipeline, you can specify the deployment targets for a job using a deployment group.
If the target machines are Azure VMs, you can quickly and easily prepare them by installing the Azure Pipelines Agent Azure VM extension on each of the VMs, or by using the Azure Resource Group Deployment task in your release pipeline to create a deployment group dynamically.
Box 2: A deployment group
