Topic 2	<ul style="list-style-type: none">Core components: This section of the exam covers exploring the functionality of Veeam Backup & Replication and system requirements.
Topic 3	<ul style="list-style-type: none">Agent backup: This section of the exam covers the identification of protection groups for automating the installation of Veeam Agents.
Topic 4	<ul style="list-style-type: none">Replication: This section of the exam covers the description of use cases, architectures, and elements of replication jobs.
Topic 5	<ul style="list-style-type: none">Moving or copying backups: This section of the exam covers use cases for backup processes using VeeamMover.

Topic 6	<ul style="list-style-type: none"> • Veeam Data Platform: This section deals with the identification and description of the goal of each major product in the Veeam Data Platform.
Topic 7	<ul style="list-style-type: none"> • Scale-out Backup Repository: This section of the exam covers the description of the architecture, placement policies, and data tiers.
Topic 8	<ul style="list-style-type: none"> • Unstructured data backup: This section is about highlighting vital features required to protect unstructured data.
Topic 9	<ul style="list-style-type: none"> • Initial security considerations: This section defines ways and tools to secure the Veeam backup server.
Topic 10	<ul style="list-style-type: none"> • Veeam Backup Enterprise Manager: The section describes the use cases for Veeam Backup Enterprise Manager.
Topic 11	<ul style="list-style-type: none"> • Backup data optimizations: This section covers the need for object storage to be backed up and the supported object storage solutions while utilizing repositories.
Topic 12	<ul style="list-style-type: none"> • Data protection strategies: This section of the exam covers an overview of data protection strategies.
Topic 13	<ul style="list-style-type: none"> • Risk scenarios: This section covers exploring various risk scenarios and identifying the type of risks we may face in the environment.

Veeam Certified Engineer v12 Sample Questions (Q126-Q131):

NEW QUESTION # 126

A customer has a local VMware environment that they back up locally and offload all retention to Wasabi's Cloud. The local backups have become unavailable, and the customer has to recover from Wasabi's Cloud.

What method would provide the fastest RTO from Wasabi so that users can interact with the recovered system?

- A. Instant Recovery to local VMware VM
- B. Restore Entire VM to local VMware VM
- C. Instant Recovery to EC2 VM
- D. Instant Recovery to Wasabi Cloud VM

Answer: A

Explanation:

In a scenario where a customer needs to recover from Wasabi's Cloud due to local backups becoming unavailable, the method that would provide the fastest Recovery Time Objective (RTO) while allowing users to interact with the recovered system as quickly as possible is D: Instant Recovery to local VMware VM.

Veeam's Instant Recovery feature allows for the restoration of a backup directly into the production environment without the need to fully copy the backup data. When recovering from cloud storage like Wasabi, the backup data will be streamed on-demand to the local VMware environment, allowing the VM to start running immediately while the remaining data is transferred in the background. This method minimizes downtime and provides the quickest path to operational recovery, ensuring users can access the recovered system with minimal delay. It's important to note that the effectiveness of this approach depends on the available bandwidth and the size of the data being recovered.

NEW QUESTION # 127

What does Veeam's Secure Restore functionality ensure during restores?

- A. 256-bit AES encryption of in-flight data
- B. Custom ports for in-flight data
- C. Proper rights/permissions on files and folders
- D. Anti-virus scanning

Answer: D

NEW QUESTION # 128

Veeam ONE _____ can detect when a potential ransomware attack is happening and be configured to take mitigating actions.

- **A. Alarm Management**
- B. Data Protection View
- C. Reporting
- D. Alert Management

Answer: A

Explanation:

Explanation

Veeam ONE can help notify you of suspicious activity in your datacenter through the Possible Ransomware Activity alarm. This alarm can be configured to take mitigating actions such as sending an email notification, running a script or creating a support case.

NEW QUESTION # 129

An engineer has used a Linux Hardened Repository as the backup repository. The immutability period is set to 60 days.

The backup settings are:

- Retention Policy: 14 days
- GFS Weekly full backup: 1 week
- GFS Monthly full backup: 6 months

If a full backup is created on 27th May 2023 with a monthly GFS flag, when will this restore point be automatically deleted?

- A. 28th July 2023
- B. 5th August 2023
- **C. 28th November 2023**
- D. 2V June 2023

Answer: C

Explanation:

The immutability period set on a Linux Hardened Repository prevents deletion of backup files for the duration of the immutability period. In this case, it is set to 60 days. However, the GFS (Grandfather- Father-Son) retention policy specifies that a monthly full backup is to be kept for 6 months. Since the full backup was created on 27th May 2023 and flagged as a monthly GFS backup, it will be retained for 6 months irrespective of the retention policy or the immutability setting. Hence, the restore point will be automatically deleted after 6 months, which would be on the 28th of November 2023.

NEW QUESTION # 130

A customer currently has one backup job that runs every four hours to backup their VMs in a transaction consistent state. Which job configuration will keep all restore points safe in case the primary site and backups go down while still being able to do a point-in-time recovery of a SQL database from the backups on the second site?

- **A. Configure a backup copy job in mirror mode, to a repository on the second site**
- B. Configure a backup copy job in pruning mode and schedule it to copy every four hours, starting at midnight, to a repository on the second site
- C. Configure a backup copy job in pruning mode and have it copy data every day, starting at midnight, to a repository on the second site
- D. Configure a second VM backup job and schedule it to copy every four hours, starting at midnight, to a repository on the second site

Answer: A

Explanation:
