Topic 4	• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q61-Q66):

NEW QUESTION # 61
What is the purpose of the Interval filter in the Orchestrator's Monitoring page?

- A. It enables you to sort the displayed data based on job priorities.
- B. It allows you to choose between background and foreground processes for the displayed data.
- C. It allows you to control the granularity of the displayed data and check the health of your system in either the last day or the last hour.
- D. It allows you to allocate licenses per machine for the displayed data.

Answer: C

Explanation:
The purpose of the Interval filter in the Orchestrator's Monitoring page is to allow you to control the granularity of the displayed data and check the health of your system in either the last day or the last hour. The Monitoring page provides various metrics and charts that show the status and performance of your robots, processes, queues, and transactions. The Interval filter lets you choose the time frame for the data that you want to see. You can select either the last day or the last hour as the interval. The data will be updated accordingly and show you the trends and changes in your system over the selected period. This can help you identify any issues or anomalies and take corrective actions if needed.

NEW QUESTION # 62
A developer needs to design a process using the REFramework. but without Orchestrator Queues. Which Is the correct order of actions the developer needs to do in the Get Transaction Data state in this case?

- A. 1. Remove the Get Transaction Item activity from GetTransactionData workflow2. Add a Read Range activity in GetTransactionData workflow to read the data from a local Excel file.3. Add the logic required to read the data source only one time.4. Add the logic required to retrieve only one row from read data each time.
- B. 1. Remove the Get Transaction Item activity from GetTransactionData workflow.2. Add a Read Row activity in GetTransactionData workflow to read the data from a local Excel file.3. Add the logic required to read the data source only one time.4. Add the logic required to check if all rows/transaction items from the read data have been processed
- C. 1. Remove the Get Transaction Item activity from GetTransactionData workflow.2. Add a Read Row activity in GetTransactionData workflow to read the data from a local Excel file.3. Add the logic required to read the data source only one time.4. Add the logic required to retrieve only one row from read data each time.5. Add the logic required to check if all rows/transaction items from the read data have been processed.
- D. 1. Remove the Get Transaction Item activity from GetTransactionData workflow.2. Add a Read Range activity in GetTransactionData workflow to read the data from a local Excel file.3. Add the logic required to read the data source only one time.4 Add the logic required to retrieve only one row from read data each time5. Add the logic required to check if all rows/transaction items from the read data have been processed.

Answer: D

Explanation:
* The correct order of actions in the Get Transaction Data state is:
* Remove the Get Transaction Item activity from the GetTransactionData workflow.
* Add a Read Range activity in the GetTransactionData workflow to read the data from a local Excel file.
* Add the logic required to read the data source only one time.
* Add the logic required to retrieve only one row from read data each time.
* Add the logic required to check if all rows/transaction items from the read data have been processed.
* This sequence ensures that the data is read once, processed row by row, and checks for completion.

NEW QUESTION # 63
What do the percentages from the Test Explorer panel represent?

- A. Percent of test data run.

- B. Correctness of the code percent.
- C. Coverage percent.
- D. Passing percent.

Answer: D

Explanation:
The percentages from the Test Explorer panel represent the passing percent of the test cases that are executed.
The Test Explorer panel shows the status of each test case, the total number of test cases, the number of passed test cases, the number of failed test cases, and the passing percent. The passing percent is calculated by dividing the number of passed test cases by the total number of test cases and multiplying by 100. For example, if there are 10 test cases and 8 of them pass, the passing percent is 80%. References: Test Explorer

NEW QUESTION # 64
What is the correct sequence of steps in a REFramework project that is linked to Orchestrator it an application exception occurs on a Queue Item m the Process Transaction stale?
Instructions: Drag the Description found on the "Left" and drop on the correct Step Sequence found on the Right".

Answer:

Explanation:
Explanation:

NEW QUESTION # 65
What do the percentages from the Test Explorer panel represent?

- A. Percent of test data run.
- B. Correctness of the code percent.
- C. Coverage percent.
- D. Passing percent.

Answer: D

Explanation:
The percentages from the Test Explorer panel represent the passing percent of the test cases that are executed.
The Test Explorer panel shows the status of each test case, the total number of test cases, the number of passed test cases, the number of failed test cases, and the passing percent. The passing percent is calculated by dividing the number of passed test cases by the total number of test cases and multiplying by 100. For example, if there are 10 test cases and 8 of them pass, the passing percent is 80%. References: Test Explorer
