Cloudera CDP Data Engineer - Certification Exam Sample Questions (Q197-Q202):

NEW QUESTION # 197

You're building a complex Airflow DAG with numerous tasks and dependencies. How can you improve the DAG's readability and maintainability?

- A. Implement extensive logging within each task to capture detailed execution information.
- B. Break down the DAG into smaller sub-DAGs with well-defined functionalities.
- C. Use clear and descriptive names for tasks, operators, and variables throughout the DAG code.
- D. All of the above

Answer: D

Explanation:
All the options listed in D contribute to improving the readability and maintainability of Airflow DAGs. Using descriptive names, modularizing with sub-DAGs, and adding relevant logging practices enhance understanding and troubleshooting for future maintenance.

NEW QUESTION # 198
Which of the following is NOT a factor considered by the Optimization Framework when optimizing a query?

- A. Data skewness
- B. User-defined functions (UDFs) complexity
- C. The phase of the moon
- D. Network latency between nodes

Answer: C

Explanation:
The Optimization Framework considers various factors like data distribution (skewness), the complexity of operations (including UDFs), and network performance among nodes. The phase of the moon is irrelevant to query optimization and is not considered by the framework.

NEW QUESTION # 199
What Airflow feature allows you to template parts of your DAG to dynamically change based on the execution context?

- A. BranchOperator
- B. XComs
- C. PythonOperator
- D. Jinja Templating

Answer: D

NEW QUESTION # 200
You need to design your Airflow DAG for data quality checks to be scalable and manageable as the number of datasets and checks grows. How can you achieve this?

- A. Hardcode all data quality checks and data sources directly within the DAG code.
- B. Leverage external configuration files (e.g., YAML or JSON) to define data quality checks and associated parameters.
- C. Utilize Airflow variables to store configuration details like data source paths and check thresholds.
- D. Implement a modular design using sub-DAGs, where each sub-DAG encapsulates the data quality checks for a specific dataset.

Answer: B,D

Explanation:
While option C might be relevant for handling transient errors, option B and D combined offer a robust approach:'BranchPythonOperator': Allows you to evaluate the outcome of the data quality checks (success or failurE. within the 'PythonOperator'. Conditional Branching: Based on the check results, the DAG can either proceed with downstream tasks (success) or trigger error handling routines if the checks fail. Automatic Retries (optional): Configuring retries for the data quality checks can be added as a safeguard in case of temporary issues (option D.

NEW QUESTION # 201

What is the correct way to define a start date for a DAG in Apache Airflow, ensuring that the DAG does not trigger immediately upon deployment?

- A. Set the start date to a future date using the datetime module.
- B. Leave the start date undefined.
- C. Use datetime.now() as the start date.
- D. Use) to automatically set the start date to one day before the current date.

Answer: A

Explanation:
Setting the start date to a future date using the datetime module ensures that the DAG will not trigger immediately upon deployment but will instead start at the specified future date. This allows for controlled execution and avoids unexpected runs during deployment.
