And we always have a very high hit rate on the Plat-Dev-301 study guide by our customers for our high pass rate is high as 98% to 100%.

## Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q45-Q50):

### NEW QUESTION # 45

An org has a requirement that an Account must always have one and only one Contact listed as Primary. So selecting one Contact will de-select any others. The client wants a checkbox on the Contact called 'Is Primary' to control this feature.

The client also wants to ensure that the last name of every Contact is stored entirely in uppercase characters. What is the optimal way to implement these requirements?

- A. Write an after update trigger on Account for the Is Primary logic and a before update trigger on Contact for the last name logic.
- B. Write a Validation Rule on the Contact for the Is Primary logic and a before update trigger on Contact for the last name logic.
- C. Write an after update trigger on Contact for the Is Primary logic and a separate before update trigger on Contact for the last name logic.
- **D. Write a single trigger on Contact for both after update and before update and callout to helper classes to handle each set of logic.**

**Answer: D**

Explanation:

A single trigger on Contact that handles both after update and before update events, utilizing helper classes for each logic set, is the most optimal implementation. It centralizes the logic for maintaining primary contacts and normalizing last names while allowing for clear separation of concerns through helper classes.

#### NEW QUESTION # 46

Universal Containers is leading a development team that follows the source-driven development approach in Salesforce. As part of their continuous integration and delivery (CI/CD) process, they need to automatically deploy changes to multiple environments, including sandbox and production.

Which mechanism or tool would best support their CI/CD pipeline in source-driven development?

- **A. Salesforce CLI with Salesforce DX**
- B. Ant Migration Tool
- C. Change Sets
- D. Salesforce Extensions for Visual Studio Code

**Answer: A**

Explanation:

Salesforce CLI with Salesforce DX supports source-driven development and is designed for continuous integration and delivery (CI/CD) processes. It enables developers to automate deployments across multiple environments, including sandbox and production.

#### NEW QUESTION # 47

A developer created the following test method:

```
@isTest(SeeAllData= true)
public static void testDeleteTrigger(){

    Account testAccount = new Account(name = 'Test1');
    insert testAccount;

    List<Account> testAccounts = [SELECT Id, Name from Account WHERE Name like 'Test%'];
    System.assert(testAccounts.size() > 0);

    delete testAccounts;
    testAccounts = [SELECT Id, Name from Account WHERE Name like 'Test%'];
    System.assert(testAccounts.size() == 0);
}
```

The developer org has five accounts where the name starts with "Test". The developer executes this test in the Developer Console. After the test code runs, which statement is true?

- A. There will be no accounts where the name starts with "Test".
- B. There will be five accounts where the name starts with "Test".
- **C. The test will fail.**
- D. There will be six accounts where the name starts with "Test".

**Answer: C**

Explanation:

Since the SeeAllData=true annotation is used, the test class does not have its own test data and is relying on the data in the org. The org already has accounts with the name starting with "Test", so the assertion that no accounts should exist after the deletion will fail because the test method only deletes the account that was created within its scope.

Apex Developer Guide

#### NEW QUESTION # 48

Universal Containers (LIC) wants to develop a customer community to help their customers log issues with their containers. The community needs to function for their German- and Spanish-speaking customers also. UC heard that it's easy to create an international community using Salesforce, and hired a developer to build out the site.

What should the developer use to ensure the site is multilingual?

- A. Use custom metadata to translate custom picklist values.
- B. Use custom objects to translate custom picklist values.
- C. Use custom labels to ensure custom messages are translated properly.
- D. Use custom settings to ensure custom messages are translated properly.

**Answer: C**

Explanation:

Custom labels are used for translating text strings in Salesforce that need to be presented in multiple languages. They support translations and can be referenced in Aura components, Visualforce pages, and Apex code.

#### NEW QUESTION # 49

A developer is building a Lightning web component that retrieves data from Salesforce and assigns it to the record property.

```
import { LightningElement, api, wire } from 'lwc';
import { getRecord } from 'lightning/uiRecordApi';

export default class Record extends LightningElement {
  @api fields;
  @api recordId;
  record;
}
```

What must be done in the component to get the data from Salesforce? A)

Add the following code above record:  
`@wire(getRecord, { recordId: '$recordId', fields: '$fields' })`

B) C)

Add the following code above record:  
`@api(getRecord, { recordId: '$recordId' })`  
Get the fields from the record and assign them to

- A. Option A
- B. Option B
- C. Option C

**Answer: A**

Explanation:

Option A is the correct answer. The @wire decorator is used in conjunction with getRecord from lightning/uiRecordApi to retrieve a

record from Salesforce. The syntax `@wire(getRecord, { recordId: '$recordId', fields: '$fields' })` sets up a reactive property, which means it will automatically rerun whenever the recordId or fields property changes.  
Get Record Data

## NEW QUESTION # 50

.....

With so many online resources, knowing where to start when preparing for an Salesforce Plat-Dev-301 exam can be tough. But with Salesforce Plat-Dev-301 practice test, you can be confident you're getting the best possible Salesforce Plat-Dev-301 Exam Dumps. Salesforce exam mirrors the Salesforce Plat-Dev-301 exam-taking experience, so you know what to expect on Salesforce Plat-Dev-301 exam day.
