No matter you are exam candidates of high caliber or newbies, our SAP C-ACDET-2506 exam quiz will be your propulsion to gain the best results with least time and reasonable money. Not only because the outstanding content of SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite C-ACDET-2506 Real Dumps that produced by our professional expert but also for the reason that we have excellent vocational moral to improve our SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite C-ACDET-2506 learning materials quality.

SAP C-ACDET-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 2	<ul style="list-style-type: none">Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

Topic 3	<ul style="list-style-type: none"> Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

SAP - C-ACDET-2506 - SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Authoritative Brain Dump Free

A lot of IT people want to pass SAP certification C-ACDET-2506 exams. Thus they can obtain a better promotion opportunity in the IT industry, which can make their wages and life level improved. But in order to pass SAP certification C-ACDET-2506 exam many people spent a lot of time and energy to consolidate knowledge and didn't pass the exam. This is not cost-effective. If you choose VCEPrep's product, you can save a lot of time and energy to consolidate knowledge, but can easily pass SAP Certification C-ACDET-2506 Exam. Because VCEPrep's specific training material about SAP certification C-ACDET-2506 exam can help you 100% pass the exam. If you fail the exam, VCEPrep will give you a full refund.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q15-Q20):

NEW QUESTION # 15

Users are able to publish a contract workspace without populating the Supplier field. What action can be performed on the Supplier field to force population before publishing?

- A. **Enable Require value before publish**
- B. Configure a visibility condition
- C. Configure a validity condition
- D. Enable Required

Answer: A

Explanation:

SAP Ariba provides a specific property in the Advanced tab called "Require value before publish", which ensures that a field must be populated prior to the contract workspace being published. Enabling this option on the Supplier field enforces this mandatory behavior during the publish action. The standard "Required" checkbox only enforces field completion in the UI during data entry but does not prevent publishing if the field is empty. Visibility conditions control whether the field is displayed, not whether it is required at publish. Validity conditions enforce value correctness but not presence at publish time. This feature enhances data completeness at critical lifecycle points.

NEW QUESTION # 16

What is the recommended order of operations for creating a required Flex Master Data (FMD) type field in a project header?

- A. 1. Create the FMD template 2. Load the data 3. Create the FMD type field
- B. 1. Load the data 2. Create the FMD type field 3. Create the FMD template
- **C. 1. Create the FMD template 2. Create the FMD type field 3. Load the data**
- D. 1. Create the FMD type field 2. Create the FMD template 3. Load the data

Answer: C

Explanation:

The correct order is to first create the Flex Master Data (FMD) template, which defines the structure and attributes of the data.

Then, create the FMD type custom field in the project header referencing that template.

Finally, load the master data records into the template via CSV import. This sequence ensures the field has a valid template to

reference, and data is available when users interact with the field.

NEW QUESTION # 17

During which SAP Activate Methodology phase do you migrate the configuration to Production?

- A. Deploy
- B. Push
- C. Migrate
- D. Move

Answer: A

Explanation:

The Deploy phase is when final cutover activities take place, including migrating configurations and master data to production, running final system tests, and performing the go-live. The other options are not standard SAP Activate phases for Ariba.

NEW QUESTION # 18

You can choose multiple field configurations and migrate them to the production site by creating a package in your test site. Which of the following steps should be included? (Select 3 correct answers)

- A. Publish the form template within the test site in order to add the form fields in the package.
- B. The Flex Master Data (FMD) templates must be defined and their data should be loaded in the production site before migrating FMD custom fields.
- C. Discard any other packages that appear in My Action Items.
- D. Make sure you update the string resource files in the production site before migrating the corresponding configurations from test to production site.
- E. If you are migrating fields that are associated with enumerations, you should load those enumerations in the production site before migrating the fields.

Answer: B,D,E

Explanation:

When migrating field configurations in SAP Ariba, it's essential to prepare all dependent components to avoid migration errors.

* Enumerations (B): These must be imported into Production before migrating fields that reference them, since the fields depend on the enumerated values to validate configurations.

* String Resource Files (C): These contain translations and label customizations. They should be uploaded and updated in Production first to ensure that migrated fields have the proper localized text.

* Flex Master Data (E): Since fields referencing FMD templates rely on these data structures, the templates and their associated data must exist in Production before migrating the fields that depend on them. Discarding unrelated packages (A) or publishing form templates (D) is unrelated or unnecessary for field migration workflows; fields and forms are handled separately. SAP best practices emphasize preparing all referenced master data and resource files to ensure smooth and error-free field migration.

NEW QUESTION # 19

Which of the following master data types requires manual migration from Test to Production in a Greenfield migration?

- A. Translations
- B. Enumerations
- C. Clause Library
- D. Relations and relation entries

Answer: B

Explanation:

In SAP Ariba Greenfield deployments, Enumerations (picklist value lists) require manual migration because they are not included in Intelligent Configuration Manager (ICM) bundles. Enumerations must be manually exported from Test and imported into Production to ensure correct picklist values for fields that depend on them.

Other master data types like Clause Library and Relations can be migrated using standard migration tools or processes. Translations are handled via AML & Translations Upload.

Ensuring enumerations are migrated correctly is critical because missing or inconsistent enumerations can cause field validation errors and disrupt system usage.

NEW QUESTION # 20

Our experts are working hard on our C-ACDET-2506 exam questions to perfect every detail in our research center. Once they find it possible to optimize the C-ACDET-2506 study guide, they will test it for many times to ensure the stability and compatibility. Under a series of strict test, the updated version of our C-ACDET-2506 learning quiz will be soon delivered to every customer's email box since we offer one year free updates so you can get the new updates for free after your purchase.
