Associate-Cloud-Engineer Dumps Reviews & Exam Associate-Cloud-Engineer Simulations

To help you prepare well, we offer three formats of our Associate-Cloud-Engineer exam product. These formats include Google Associate-Cloud-Engineer PDF dumps, Desktop Practice Tests, and web-based Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) practice test software. Our efficient customer service is available 24/7 to support you in case of trouble while using our Associate-Cloud-Engineer Exam Dumps. Check out the features of our formats.

Google Associate Cloud Engineer certification is a valuable asset for professionals seeking to enhance their career prospects in the cloud computing industry. Google Associate Cloud Engineer Exam certification demonstrates a candidate's ability to use Google Cloud Platform technologies to design, develop, and manage cloud-based applications. Google Associate Cloud Engineer Exam certification also provides individuals with the skills and knowledge needed to work effectively in a cloud computing environment. As more organizations adopt cloud computing technologies, the demand for certified Google Associate Cloud Engineers is likely to increase, making this certification a valuable investment for individuals seeking a career in cloud computing.

Google Associate Cloud Engineer Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31

A company has many applications on Amazon EC2 instances running in Auto Scaling groups. Company policies require that data on the attached Amazon EBS volume must be retained.

Which actions will meet this requirement without impacting performance?

- A. Enable Termination Protection on the Amazon EC2 instances.
- B. Change the auto scaling Health Check to point to a source on the root volume.
- C. Use Amazon EC2 user data to set up a synchronization job for root volume data.
- D. **Disable DeleteOnTermination for the Amazon EBS volumes.**

Answer: D

Explanation:

Explanation/Reference: https://aws.amazon.com/ec2/faqs/#Spot_instances

NEW QUESTION # 32

You have designed a solution on Google Cloud Platform (GCP) that uses multiple GCP products.

Your company has asked you to estimate the costs of the solution.

You need to provide estimates for the monthly total cost. What should you do?

- A. Provision the solution on GCP. Leave the solution provisioned for 1 week.
Navigate to the Billing Report page in the Google Cloud Platform Console.
Multiply the 1 week cost to determine the monthly costs.
- B. **For each GCP product in the solution, review the pricing details on the products pricing page.**
Use the pricing calculator to total the monthly costs for each GCP product.
- C. Provision the solution on GCP. Leave the solution provisioned for 1 week.
Use Stackdriver to determine the provisioned and used resource amounts.
Multiply the 1 week cost to determine the monthly costs.
- D. For each GCP product in the solution, review the pricing details on the products pricing page.
Create a Google Sheet that summarizes the expected monthly costs for each product.

Answer: B

Explanation:

GCP best practices is to use Billing Calculator to estimate costs.

NEW QUESTION # 33

You have created a code snippet that should be triggered whenever a new file is uploaded to a Cloud Storage bucket. You want to deploy this code snippet. What should you do?

- A. **Use Cloud Functions and configure the bucket as a trigger resource.**
- B. Use Dataflow as a batch job, and configure the bucket as a data source.
- C. Use Google Kubernetes Engine and configure a CronJob to trigger the application using Pub/Sub.
- D. Use App Engine and configure Cloud Scheduler to trigger the application using Pub/Sub.

Answer: A

Explanation:

Explanation

Google Cloud Storage Triggers

Cloud Functions can respond to change notifications emerging from Google Cloud Storage. These notifications can be configured to trigger in response to various events inside a bucket-object creation, deletion, archiving and metadata updates.

Note: Cloud Functions can only be triggered by Cloud Storage buckets in the same Google Cloud Platform project.

Event types

Cloud Storage events used by Cloud Functions are based on Cloud Pub/Sub Notifications for Google Cloud Storage and can be configured in a similar way.

Supported trigger type values are:

google.storage.object.finalize

google.storage.object.delete

google.storage.object.archive

google.storage.object.metadataUpdate

Object Finalize

Trigger type value: google.storage.object.finalize

This event is sent when a new object is created (or an existing object is overwritten, and a new generation of that object is created) in the bucket.

https://cloud.google.com/functions/docs/calling/storage#event_types

NEW QUESTION # 34

Your organization uses G Suite for communication and collaboration. All users in your organization have a G Suite account. You want to grant some G Suite users access to your Cloud Platform project. What should you do?

- A. Grant them the required IAM roles using their G Suite email address.
- B. Enable Cloud Identity in the GCP Console for your domain.
- C. Create a CSV sheet with all users' email addresses. Use the gcloud command line tool to convert them into Google Cloud Platform accounts.
- D. In the G Suite console, add the users to a special group called cloud-console-users@yourdomain.com. Rely on the default behavior of the Cloud Platform to grant users access if they are members of this group.

Answer: A

NEW QUESTION # 35

You have an application that runs on Compute Engine VM instances in a custom Virtual Private Cloud (VPC).

Your company's security policies only allow the use of internal IP addresses on VM instances and do not let VM instances connect to the internet. You need to ensure that the application can access a file hosted in a Cloud Storage bucket within your project. What should you do?

- A. Enable Private Service Access on the Cloud Storage Bucket.
- B. Deploy a Cloud NAT instance and route the traffic to the dedicated IP address of the Cloud Storage bucket.
- C. Enable Private Google Access on the subnet within the custom VPC.
- D. Add storage.googleapis.com to the list of restricted services in a VPC Service Controls perimeter and add your project to the list of protected projects.

Answer: A

NEW QUESTION # 36
