Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

In which order are the API Client API Implementation and API Interface components called in a typical REST request?

- A. API Client > API Interface > API Implementation
- B. API Implementation > API Interface > API Client
- C. API Client > API Implementation > API Interface
- D. API Interface > API Client > API Implementation

Answer: A

Explanation:

In a typical REST request, the components are called in a specific order to handle the client's request and provide the response.

Here's the order and detailed explanation:

- * API Client:
 - * Initiates Request: The client (e.g., web or mobile application) sends a request to the API endpoint.
 - * API Interface:
 - * Gateway/Proxy: This layer is typically managed by an API gateway or proxy, which handles the incoming request, applies security policies, and routes it to the appropriate backend service.
 - * Responsibilities: Includes request validation, rate limiting, authentication, and authorization.
 - * API Implementation:
 - * Backend Service: The actual implementation of the API logic resides here. It processes the request, interacts with the necessary databases or external services, and generates the response.

NEW QUESTION # 14

An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.

Which category of enterprise software has these core capabilities, when used for its typical and intended purpose?

- **A. Customer Relationship Management (CRM)**
- B. Supply Chain Management (SCM)
- C. IT Service Management (ITSM)
- D. Business-to-Business (B2B)

Answer: A

Explanation:

Customer Relationship Management (CRM) systems are designed to manage an organization's interactions with current and potential customers. Here's a detailed explanation:

- * Core Capabilities:
- * Cross-Selling Opportunities: CRM systems track customer interactions, preferences, and purchasing history, helping businesses identify opportunities for cross-selling and upselling.
- * Prospect Data Management: CRM systems manage prospect information, track leads, and nurture relationships through the sales funnel.
- * Typical Use:
- * Sales Management: Helps sales teams manage and analyze customer interactions and data throughout the customer lifecycle.
- * Marketing Automation: Assists in automating marketing campaigns, segmenting customer lists, and tracking campaign effectiveness.
- * Customer Service: Provides tools for managing customer support cases, improving customer satisfaction, and retaining customers.

NEW QUESTION # 15

During a planning session with the executive leadership, the development team director presents plans for a new API to expose the data in the company's order database. An earlier effort to build an API on top of this data failed, so the director is recommending a design-first approach.

Which characteristics of a design-first approach will help make this API successful?

- A. Building MUnit tests so administrators can confirm code coverage percentage during deployment
- B. Publishing the fully implemented API to Exchange so all developers can reuse the API
- **C. Developing a specification so consumers can test before the implementation is built**
- D. Adding global policies to the API so all developers automatically secure the implementation before coding anything

Answer: C

Explanation:

A design-first approach emphasizes creating the API specification before implementation, ensuring better alignment with consumer needs and reducing the risk of project failure. Here's a detailed explanation:

* API Specification:

* Definition: An API specification is a detailed, formal description of the API's endpoints, request/response formats, and protocols.

* Consumer Testing: Allows API consumers (developers) to understand, test, and provide feedback on the API design before actual development begins.

* Advantages:

* Early Feedback: Consumers can test the API design using mock services or tools like API Designer and provide feedback, ensuring the API meets their requirements.

* Reduced Rework: Identifies potential issues and design flaws early, reducing costly changes during the implementation phase.

* Documentation: Provides comprehensive documentation that aids in the development and future maintenance of the API.

NEW QUESTION # 16

An API client makes an HTTP request to an API gateway with an Accept header containing the value "application/json"

What is a valid HTTP response payload for this request in the client's requested data format?

- A. status: healthy
- B. {"status": "healthy"}
- C. <status>healthy</status>
- D. status('healthy')

Answer: B

Explanation:

When an API client makes an HTTP request with an Accept header containing the value "application/json", the API server should respond with a payload formatted as JSON. Here's a detailed explanation:

* Accept Header:

* Purpose: The Accept header indicates the media type(s) that the client is willing to receive from the server.

* Value "application/json": Specifies that the client expects a response in JSON format.

* Valid JSON Response:

* Format: JSON (JavaScript Object Notation) is a lightweight data interchange format that uses key-value pairs.

* Example: A valid JSON response for the requested format would be {"status": "healthy"}.

* Key: "status"

* Value: "healthy"
