## Veeam Certified Engineer v12 Sample Questions (Q128-Q133):

### NEW QUESTION # 128

A photography company provides online purchase of photographs. The core of the business operates from an Oracle database that

stores all company images. New photos are continuously added to the database at widely variable intervals. Company policy only requires the database to be protected.

Which Veeam Feature will provide complete backup and recovery for this database?

- A. Use the Veeam Plug-in for Oracle RMAN Back up the entire host server including the database and logs daily.
- **B. Use the Veeam Plug-in for Oracle RMAN Back up the database daily Back up the archived redo logs at 15-minute intervals.**
- C. Use the Veeam Explorer to Identify and backup the database and logs daily along with the log backup set to 15-minute interval.
- D. Use the Veeam Agent. Back up the entire server including the database with Consistent Server Backup feature

**Answer: B**

Explanation:

The Veeam Plug-in for Oracle RMAN is designed specifically for efficient backup and recovery of Oracle databases. It allows for direct integration with Oracle RMAN (Recovery Manager), ensuring that the backups are consistent and reliable. For a photography company that relies heavily on an Oracle database with new photos being continuously added, this feature provides an ideal solution. The daily backup of the database ensures that all new content is secured regularly, while the 15-minute interval for archived redo logs ensures that any recent transactions are also protected. This approach aligns well with the company's requirement to protect only the database. References:

#### NEW QUESTION # 129

A file on a Windows virtual machine hosted on VMware vSphere is corrupted and must be restored. VMware Tools is installed and up to date on the virtual machine. The Veeam mount server cannot connect to the virtual machine through the network.

Which restore method provides the fastest restore (RTO)?

- A. It is impossible to restore the file on the virtual machine if the mount server cannot reach it through the network.
- **B. Run the Veeam File Restore wizard and let it restore through VIX.**
- C. Start an Instant VM Recovery session and log on into the restored image to copy/paste the file to restore.
- D. Run the Veeam File Restore wizard and use copy to?to download the file locally in a shared folder.

**Answer: B**

#### NEW QUESTION # 130

A backup administrator Is asked to perform a file-level restore on a Windows VM for the first time since Veeam Backup & Replication has been installed and left unconfigured. Which of the following items would be used during this process?

- **A. The mount server configured for the repository**
- B. The guest interaction proxy configured for the backup job
- C. The gateway server configured for the repository
- D. The FLR helper appliance configured for the Restore wizard

**Answer: A**

#### NEW QUESTION # 131

On Monday, a backup administrator found out that some backup jobs were missing from a configuration. They want to roll back the configuration database to Friday's state. Which configuration restore mode should be used?

- A. Instant SQL Recovery
- **B. Restore**
- C. Migrate
- D. Veeam Explorer for Microsoft SQL

**Answer: B**

Explanation:

To roll back the configuration database to Friday's state, the backup administrator should use the 'Restore' mode available in Veeam Backup & Replication. This mode allows for the entire configuration backup to be restored, which includes the job settings and history, and brings the configuration database back to the state it was in at the time of the backup.

#### NEW QUESTION # 132

A Scale-out Backup Repository with one local extent has been configured as follows.

A daily VMware backup job retention is 31 days, keeping weekly GFS full backups for 14 weeks.

It is Mar, 20. A file from a backup that occurred the week of Jan, 1 must be recovered. Where is the data?

- **A. The capacity tier**
- B. The performance tier
- C. The data is no longer in the Scale-out Backup Repository
- D. The archive tier

**Answer: A**

Explanation:

Based on the configuration shown in the image, backups older than 21 days are moved to the capacity tier. Since the VMware backup job retention is set for 31 days and keeps weekly GFS full backups for 14 weeks, the backup from the week of January 1st is older than 21 days but within the 14-week GFS retention policy. Therefore, as of March 20, the backup data you need to recover would be in the capacity tier, not on the local performance tier, because it has been offloaded to the object storage configured as the capacity tier to reduce long-term retention costs.
