

New Nutanix NCP-MCA Braindumps Files & Practice Test NCP-MCA Pdf

What's more, part of that Pass4suresVCE NCP-MCA dumps now are free: https://drive.google.com/open?id=1qNQjgvbhNcInXSvpQ_LtL319YHKkdb0

The clients can consult our online customer service before and after they buy our Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) guide dump. We provide considerate customer service to the clients. Before the clients buy our NCP-MCA cram training materials they can consult our online customer service personnel about the products' version and price and then decide whether to buy them or not. After the clients buy the NCP-MCA study tool they can consult our online customer service about how to use them and the problems which occur during the process of using. If the clients fail in the test and require the refund our online customer service will reply their requests quickly and deal with the refund procedures promptly. In short, our online customer service will reply all of the clients' questions about the NCP-MCA cram training materials timely and efficiently.

Why is the Nutanix NCP-MCA test dump chosen by so many IT candidates? Firstly, the high quality and latest material are the important factors of NCP-MCA vce exam. Besides, time and money can be saved by use of the NCP-MCA brain dumps. Instant download is available for you, thus you can study as soon as you complete purchase. Moreover, one year free update is the privilege after your purchase. You will get the latest study material for preparation. Hurry up to choose NCP-MCA Training Pdf, you will success without doubt.

Practice Test Nutanix NCP-MCA Pdf - NCP-MCA Exam Duration

Because our NCP-MCA practice materials are including the best thinking from upfront experts with experience more than ten years. By using our NCP-MCA study guide, your possibility of getting certificate and being success will increase dramatically and a series of benefits will come along in your life. So our NCP-MCA real quiz is versatile and accessible to various exam candidates. Just trust us and you can get what you want for sure!

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q78-Q83):

NEW QUESTION # 78

A company has a business-critical VM. The VM Utilization of CPU and memory differs from time to time, but can never be allowed to run out of resources. The administrator also wants to make sure that the VM is not over provisioned when not needed.

The administrator determines these requirements that have been validated and automated in a test environment should also apply for the production environment:

VCPU needs to be added when CPU Utilization been over 80% for 15 minutes.

Memory needs to be increased by 4 GB when utilization reaches 80%.

Return of over-allocated resources must not affect other business applications.

What can the administrator do with the least amount of effort to make sure the VM is always performant and returns resources when not required?

- A. Import the playbook and adjust the values
- B. Create a task based on requirements
- C. Clone and adjust the system-created playbooks
- D. Create a blueprint based on requirements

Answer: A

Explanation:

The easiest way to automate the VM utilization and resource allocation is to use a playbook that has been already tested and validated in a test environment. A playbook is a collection of actions that can be triggered by events or schedules to perform various tasks on the Nutanix platform. By importing the playbook from the test environment to the production environment, the administrator can save time and effort in creating a new playbook from scratch. The administrator only needs to adjust the values of the playbook parameters, such as the VM name, the CPU and memory thresholds, the VCPU and memory increments, and the notification settings, to match the production environment. The playbook can then be executed manually or automatically based on the desired frequency and conditions.

NEW QUESTION # 79

An administrator creates a blueprint to deploy VMs to multiple clouds, so that business will remain functional in the event of a disaster.

What component describes this feature?

- A. Profile Actions
- B. Package
- C. Service
- D. Substrates

Answer: D

Explanation:

Substrates are the components of a blueprint that define the cloud resources and configurations for deploying VMs or applications. Substrates can be associated with different cloud accounts, such as AWS, Azure, GCP, or Nutanix, to enable multicloud deployments. By using substrates, an administrator can create a blueprint that can deploy VMs to multiple clouds, depending on the availability, cost, or performance requirements.

Substrates1

NEW QUESTION # 80

What is the minimum number of actions required in the Branch Condition for X-Play?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

A Branch Condition is a type of action in X-Play that allows you to create conditional logic based on the output of a previous action or a custom expression. A Branch Condition can have multiple branches, each with a different condition and a different set of actions to execute if the condition is met. The minimum number of actions required in a Branch Condition is two: one for the condition itself, and one for the action to perform if the condition is true. If the condition is false, the Branch Condition will skip to the next action in the Playbook. You can add more branches to a Branch Condition, but you cannot have less than two. References: Nutanix Calm: Playbooks - Read the Docs and Nutanix Calm: Branch Condition - Read the Docs.

NEW QUESTION # 81

An administrator's environment has a complex Sysprep script that must be applied to all new VMs. Which feature could be used to accomplish this?

- A. Quota Management
- B. Clone from Image Service
- C. Scheduler Policies
- D. Guest Customization

Answer: D

Explanation:

Comprehensive and Detailed Explanation

Nutanix Calm supports OS customization through Guest Customization, which:

* Applies Sysprep for Windows

* Injects configuration files

* Sets hostnames, time zones, networking, and more

* Runs scripts post-deployment

Sysprep is specifically executed during Windows Guest Customization.

Therefore, Option D: Guest Customization is correct.

NEW QUESTION # 82

An administrator at a busy software development company is looking to roll out Calm for automation and estimates they will be creating 200 Projects, 500 Runbooks, 1500 Blueprints and automating the deployment of 7500 VMs for their development teams. What size of Prism Central VM(s) is recommended to host the Calm environment?

- A. 1 node Large - 10vCPU and 52GB Memory per node.
- B. 3 nodes Large - 10vCPU and 52GB Memory per node.
- C. 3 nodes Small - 6vCPU and 30GB Memory per node.
- D. 1 node Small - 6vCPU and 30GB Memory per node.

Answer: B

Explanation:

According to the Nutanix Multicloud Automation Administration (NMCAA) course, the recommended Prism Central VM size depends on the number of VMs that are managed by Calm and the number of concurrent users. For a large-scale environment with more than 5000 VMs and more than 100 concurrent users, the recommended size is 3 nodes Large - 10vCPU and 52GB Memory

per node¹. This size provides enough resources for the Prism Central cluster to handle the workload and performance requirements of Calm.
